Elevations of the building

The main renewals that we could see in this views are the new storey added to the top of the building, the penthouse, the balconies and the main entrances to the building.

The carактерistic part of the balconies is that one is an exterior balconie and the other one is interior in each apartment, by this way we have more espace inside the apartment with a lot of light inside the building, because the interior part is closed by big windows.

In the penthouse there is one part of comunitary terrace and another parts witch are private for each three pentohuses.
