

INDEX

NOMENCLATURE.....	31
INTRODUCTION.....	35
1. Biodegradable polymers	37
2. Polyhydroxyalcanoates (PHAs).....	38
3. Polymers blends modulating the functional properties of the PHBV	41
4. Active films based on PHAs	42
5. Effect of active compounds on the biodegradation behaviour of PHAs	48
6. Final remarks.....	53
OBJECTIVES	85
CHAPTERS	89
CHAPTER 1.1: Polyhydroxybutyrate-co-hydroxyvalerate (PHBV) with Phenolic Acids for Active Food Packaging	93
ABSTRACT	95
1. Introduction	95
2. Materials and Methods	96
2.1. Materials	96
2.2. Preparation of films.....	97
2.3. Characterisation of films.....	97
2.3.1. Final concentration of phenolic acids in the films	97
2.3.2. Microstructural analyses	97
2.3.3. Thermal analysis.....	97
2.3.4. X-ray Diffraction (XRD).....	98
2.3.5. Fourier transform infrared spectroscopy (FTIR).....	98
2.3.6. Tensile properties	98
2.3.7. Barrier properties.....	98
2.3.8. Optical properties.....	99
2.4. Migration analyses in different food simulants	99
2.5. Statistical analysis.....	100
3. Results and Discussion.....	100
3.1. Structural and molecular properties of the films	100
3.2. Thermal Behaviour and Crystallinity of the Films	102
3.3. Mechanical, Barrier and Optical Properties of the Films	106
3.4. Migration in Food Simulants	108
4. Conclusions	110

INDEX

CHAPTER 1.2: Release and antibacterial action of phenolic acids incorporated into PHBV films..... 142

ABSTRACT	144
1. Introduction	144
2. Materials and Methods	146
2.1. Materials	146
2.2. Film preparation	146
2.3. Scanning electron microscopy (FESEM).....	146
2.4. Quantification of the active compound retention in melt blended films..	147
2.5. Release kinetics of FA and PCA in different media	147
2.6. Assessment of antimicrobial activity	148
2.7. Statistical analysis.....	149
3. Results and Discussion.....	149
3.1. Final concentration and distribution of active compounds in the films ..	149
3.2. Release Kinetics of phenolic acids	151
3.3. Release kinetics in water and antibacterial action of surface loaded films	154
4. Conclusions	156

CHAPTER 2: Effect of active rice straw extracts on the properties and migration of PHBV films..... 187

ABSTRACT	189
1. Introduction	189
2. Materials and methods	191
2.1. Materials	191
2.2. Obtaining rice straw extracts	191
2.3. Characterisation of extracts	191
2.3.1. Thermogravimetric analysis.....	191
2.3.2. Composition of extracts	191
2.4. Production of the films.....	192
2.5. Characterisation of films.....	192
2.5.1. Microstructure	192
2.5.2. Mechanical and barrier properties	193
2.5.3. Light transmittance and colour measurements	193
2.5.4. Thermal properties.....	194
2.6. Overall and specific migration	194
2.7. Statistical analysis.....	195
3. Results and discussion	195

3.1.	Extract properties	195
3.1.1.	Composition of the extracts	195
3.1.2.	Thermal stability of extracts.....	197
3.2.	Film Properties	198
3.2.1.	<i>Microstructure and thermal behaviour of films with and without extracts.</i>	198
3.2.2.	Colour and appearance.....	201
3.2.3.	Barrier and mechanical properties.....	202
3.3.	Overall and specific migration of films	203
4.	Conclusions	206
CHAPTER 3: Active PHBV films with ferulic acid or rice straw extracts for food preservation		238
ABSTRACT		240
1.	Introduction	240
2.	Materials and methods	242
2.1.	Materials	242
2.2.	Obtaining rice straw extracts	242
2.3.	Production of PHBV films	243
2.4.	Barrier capacity of the films to water vapour, oxygen and UV- VIS light...	243
2.5.	Antibacterial activity of the films in different food matrices.....	243
2.5.1.	Antibacterial tests.....	243
2.5.2.	Characterization of food matrices.....	244
2.6.	Capacity of the films to extend shelf-life of pork meat	244
2.6.1.	Meat packaging and storage	244
2.6.2.	Controlled parameters throughout storage time	244
<i>Colour changes</i>		244
<i>Meat oxidation</i>		245
<i>Microbial counts</i>		245
2.7.	Statistical analysis.....	245
3.	Results and discussion	245
3.1.	Barrier properties of the films	245
3.2.	Antimicrobial capacity of the films	247
3.3.	Meat quality preservation capacity of the films.....	249
4.	Conclusions	254
CHAPTER 4: Improving Thermo-Sealing of Poly(3-hydroxybutyrate-co-3-hydroxyvalerate) by Blending with Polycaprolactone.....		262
ABSTRACT		264

INDEX

1. Introduction	264
2. Materials and Methods	266
2.1. Materials	266
2.2. Obtaining films	266
2.3. Characterization of the film properties.....	267
2.3.1. Thermal analysis.....	267
2.3.2. Microstructure.....	267
2.3.3. Barrier and tensile properties	267
2.3.4. Optical properties	268
2.3.5. Fourier Transform Infrared (FTIR) Spectroscopy	268
2.4. Determination of the sealing strength	268
2.5. Statistical analysis.....	269
3. Results and Discussion.....	269
3.1. Morphology and Structure of films.....	269
3.2. Thermal behaviour	271
3.3. Mechanical, barrier and optical properties.....	274
3.4. Heat-sealing of the films	276
4. Conclusions	279
CHAPTER 5: PHBV/PCL blend films with active compounds to prolong shelf life of meat	312
ABSTRACT	314
1. Introduction	314
2. Materials and methods	316
2.1. Materials	316
2.2. Films preparation.....	316
2.3. Characterization of films	317
2.3.1. Film microstructure and thickness.....	317
2.3.2. Fourier Transform Infrared Spectroscopy (FTIR)	317
2.3.3. Optical, mechanical, and barrier analysis	317
2.3.4. Thermal properties.....	318
2.3.5. Sealing Strength.....	318
2.4. Pork meat preservation capacity of the films.....	319
2.4.1. Control of physico-chemical changes in chilled stored meat: loss of mass, pH, colour and lipid oxidation.....	319
2.4.2. Control of bacterial growth in chilled meat.....	319
2.5. Statistical analysis.....	320

3. Results and discussion	320
3.1. Microstructure and FTIR spectra	320
3.2. Thermal behaviour of the films	323
3.3. Barrier, mechanical and optical properties of the films	325
3.2. Thermo-sealing of the samples	328
3.5. Analysis of the preservation capacity of films on packaged pork meat...	329
3.5.1. Physical and Chemical Parameters of Packaged Meat	329
3.5.2. Antimicrobial capacity of films	332
4. Conclusions	333
CHAPTER 6: Influence of active compounds on the composting behaviour of PHBV and PHBV/PCL blend films	342
ABSTRACT	344
1. Introduction	344
2. Materials and methods	346
2.1. Materials	346
2.2. Production of the films	347
2.3. Disintegration of the films under composting conditions	347
2.4. Monitoring samples during disintegration	348
2.4.1. Analysis of the film microstructure	348
2.4.2. Thermogravimetric analysis.....	348
2.4.3. Fourier Transform Infrared Spectroscopy (FTIR)	348
2.4.4. Polymer crystallinity.....	348
2.5. Statistical analysis.....	348
3. Results and discussion	349
3.1. Compost characteristics.....	349
3.2. Disintegration kinetics	349
3.3. Structural changes throughout the degradation process.....	352
3.4. Physicochemical changes in the films throughout the degradation process	357
3.5. Thermal study of films at different composting times	358
4. Conclusions	363
GENERAL DISCUSSION	374
CONCLUSIONS	386
