

TABLE OF CONTENTS

ACKNOWLEDGEMENTS	I
ABSTRACT	III
RESUMEN	V
RESUM	VII
TABLE OF CONTENTS	IX
LIST OF FIGURES	XI
LIST OF TABLES	XIII
ABBREVIATIONS	XV
GENERAL INTRODUCTION	1
Reproductive strategies in angiosperms: monocarpic plants	3
Proliferative arrest in Arabidopsis	4
Shoot apical meristem: structure, regulation and maintenance	6
Genetic control of proliferative arrest	10
Hormonal control of proliferative arrest	13
References	18
OBJECTIVES	25
CHAPTER 1	29
Introduction	31
Results	33
Repression of auxin-related pathways in the SAM correlates with PA	33
PA is affected by modifications in auxin biosynthesis and catabolism within the SAM	36
The effect of alterations in auxin levels on PA correlates with changes in CK response	41
CK-mediated alterations in PA are linked to changes in auxin biosynthesis and response	43
Auxin-related pathways may be regulated by FRUITFULL in the SAM during PA	46
Discussion	49
Material and methods	54
Plant material	54
Construction of transgenes and plant transformation	54
Flower and fruit number quantification	55
Reactivation, chemical and hormonal treatments	56

Quantification of IAA	56
Confocal microscopy and image analysis	57
Statistical analyses	57
References.....	58
Supplemental information	62
CHAPTER 2	73
Introduction	75
Results	77
FUL accumulates in the nucleus during PA.....	77
FUL controls ABA, auxin and cytokinin pathways during PA.....	79
Identification of potential FUL targets related to hormonal, shoot development, cell cycle and senescence pathways during PA	85
Temporal expression profiles of wild-type and <i>ful</i> apices at the end of the flowering period	89
FUL regulates the expression of genes related to JA pathways during PA.....	92
Changes in a JA signaling reporter and JA content in the apex correlate with PA	95
JA treatments delay PA and reactivate arrested meristems	97
FUL represses JA response during PA	100
Discussion.....	101
Material and methods.....	107
Plant material.....	107
Generation of constructs and plant transformation.....	107
RNA-seq and data analysis	108
Flower and fruit number quantification	109
Reactivation and hormonal treatments.....	109
Confocal microscopy and image analysis	110
Quantification of JA.....	111
Statistical analyses	111
References.....	111
Supplemental information	120
GENERAL DISCUSSION	125
References.....	133
CONCLUSIONS	135
