ABSTRACT	12
RESUMEN	14
RESUM	16
GENERAL INTRODUCTION	20
1. Rice	22
1.1. Evolutionary history and domestication: origin, subpopulations and global expansion.	
1.2. Economic and social importance of cultivation	
1.3. Ecology, cycle and morphology of cultivation.	
1.4. Characteristics of agronomic interest. Adaptation to sensitive environments. Allelopathy and NUE.	
2. Targeted genetic improvement	33
2.1. Genetic basis of rice. It's value as a model plant.	
2.2. Structured genetic resources. Populations and collections.	
2.3. Improvement tools	
2.3.1. Whole Genome Sequencing (WGS) and GWAS	
2.3.2. RNA-seq	
OBJECTIVES	44
CHAPTERS	48
1. Deciphering the Genetic Basis of Allelopathy in <i>japonica</i> Rice Cultivated in Temperate Regions Using a Genome-Wide Association Study	50
1.1. Abstract	
1.2. Introduction	
1.3. Material and Methods	
1.4. Results	
1.5. Discussion	
1.6. Conclusions	
1.7. References	
2. Comparative Transcriptomic Analysis of an Allelopathic and Non-Allelopathic Temperate Rice Varieties and Mining for Candidate Genes Driving Early Weed-Suppressive Responses to <i>Echinochloa crus-galli</i>	96
1.1. Abstract	
1.2. Introduction	

1.3. Material and Methods	
1.4. Results	
1.5. Discussion	
1.6. Conclusions	
1.7. References	
3. Characterization of an Eight-Parent MAGIC Rice Population Identification of QTLs Controlling Plant Architecture and Phenology	144
1.1. Abstract	
1.2. Introduction	
1.3. Material and Methods	
1.4. Results	
1.5. Discussion	
1.6. Conclusions	
1.7. References	
4. Genome-Wide Association Mapping in a MAGIC Rice Population Reveals QTLs and Candidate Genes Controlling Nitrogen Use Efficiency and Grain Yield under Low-Nitrogen Inputs	216
1.1. Abstract	
1.2. Introduction	
1.3. Material and Methods	
1.4. Results	
1.5. Discussion	
1.6. Conclusions	
1.7. References	
GENERAL DISCUSSION	274
CONCLUSIONS	284
