

Contents

Chapter 1. Introduction.....	8
1.1 Zeolites: history, variety, structure, properties.....	8
1.2 Applications of zeolites.....	11
1.3 Acidity	13
1.3.1 Brønsted acidity in zeolites.....	13
1.3.2 Location of Brønsted acid sites. Distribution of aluminium and hydrogen atoms. Characterization methods.....	14
1.3.3 Acid strengths of Brønsted acid sites. Characterization methods.....	19
1.4 Why should we use neutrons to measure Brønsted acidity in zeolites?.....	23
Chapter 2. Methods and materials.....	27
2.1 Introduction to neutron scattering	27
2.1.1 Properties of neutron	27
2.1.2 Basis of neutron scattering	29
2.1.3 Coherent and incoherent scattering	32
2.1.4 Energy and momentum conservation laws	34
2.1.5 Inelastic neutron scattering	35
2.1.5.1 Kinematic range of INS instruments. Spectrometers with direct and indirect geometry.....	35
2.1.5.2 IN1-Lagrange instrument.....	37
2.1.5.3 Incoherent approximation.....	39
2.1.5.4 Scattering law.....	40
2.1.5.5 INS spectrum.....	41
2.2 Computational methods.....	44
2.2.1 Normal modes analysis of molecular vibrations	44
2.2.2 Schrödinger equation	47
2.2.3 Basic theorem and equation in Density Functional Theory	47
2.2.4 Exchange-correlation functionals	49
2.2.5 DFT codes	51
2.2.6 Selection of calculation parameters	52
2.2.7 Mantid and aCLIMAX software	53
2.3 Nuclear Magnetic Resonance Spectroscopy	54
2.3.1 Basic principles of NMR	54
2.3.2 Magic Angle Spinning	57
2.3.3 Cross polarization (CP) method	57
2.3.4 NMR in study of zeolites	58
2.3.5 Experimental details of NMR experiments	60
2.4 Preparation of samples	60
2.4.1 Synthesis of LTA-40	60
2.4.2 Synthesis of LTA-5	62

Chapter 3. Inelastic Neutron Scattering Study on the Location of Brønsted Acid

Sites in High Silica LTA Zeolite.....	64
3.1 Computational models of LTA-40	65
3.2 Comparison between experimental INS and theoretical DFT results	66
3.3 Frequency analysis of the vibrational bands	68
3.4 Multiphonon analysis	69
3.5 Periodic DFT energies	71
3.6 ²⁹ Si NMR and Infrared characterization of high silica LTA (LTA-40)	73
3.7 Comparison of the calculated OH-stretching frequencies with experimental Infrared results	75
3.8 Additional CASTEP/PBEsol study of possible crystallographic positions of the acid sites LTA-40	76
3.9 Conclusions to the Inelastic Neutron Scattering Study on the Location of Brønsted Acid Sites in High Silica LTA Zeolite	78

Chapter 4. Inelastic Neutron Scattering Study of the Aluminum and Brønsted

Site Location in Aluminosilicate LTA Zeolites.....	79
4.1 ²⁹ Si MAS NMR Characterization of LTA-5	80
4.2 Computational models of Al/H distributions in LTA-5	82
4.3 Comparison between experimental INS and theoretical DFT results	88
4.4 Multiphonon analysis	92
4.5 Frequency analysis of the vibrational bands in stable Al distribution of LTA-5.....	94
4.6 Analysis of the Al and H distributions in models d1-d9 of LTA-5	95
4.6.1 Aluminium in double-four rings	96
4.6.2 Proton content of 8T-rings	96
4.6.3 Aluminum content of 6T-rings	97
4.6.4 Al-Al and H-H close distances	97
4.7 Mathematical comparison of experimental and calculated INS spectra	99
4.8 Is the calculated INS spectrum method-dependent? CASTEP vs. DMol3.....	100
4.9 Conclusions to the Inelastic Neutron Scattering Study of the Aluminum and Brønsted Site Location in Aluminosilicate LTA Zeolites	106

Chapter 5. General conclusions.....107

Bibliography.....110
