

Contents

1	General Introduction: The Engagement Imperative in Digital Mental Health	2
1.1	The Challenge: The Global Burden of Depression and the Treatment Gap	2
1.2	The Promise: The Emergence of Digital Therapeutics as a Scalable Solution	3
1.3	The Paradox: The Engagement-Efficacy Paradox	4
1.4	The Thesis Argument: A Human-Technology Interaction Approach . . .	5
1.5	Scope and Principal Contributions of the Research	6
1.6	Dissertation Roadmap	7
I	Foundational Principles of User-Centred Design in Digital Mental Health	8
2	A Mixed-Methods Co-Design Framework for Developing Scalable and User-Centred Digital Mental Health Solutions	10
2.1	Introduction	10
2.2	Background and Related Work	11
2.2.1	Co-Design in Digital Health	11
2.2.2	Integrating Qualitative and Quantitative Methods in Co-Design .	12
2.2.3	The Evolving Landscape of User Expectations	12
2.3	Methods	13
2.3.1	Participant Recruitment and Characteristics	13
2.3.2	Data Collection Procedures and Instruments	14
2.3.3	Mixed-Methods Data Analysis Strategy	15
2.3.4	Ensuring Methodological Rigour and Trustworthiness	15
2.4	Results	16
2.4.1	The Primacy of Foundational Features: Usability, Content, and Accessibility	17
2.4.2	The Privacy Paradox: High Demand for Security, Low Confidence in the Prototype	18
2.4.3	Cautious Optimism Towards Advanced Features: Personalisation and Gamification	18
2.5	Discussion	20
2.5.1	Interpretation of Key Findings: Balancing Trust and Innovation .	20
2.5.2	From Findings to Framework: Actionable Principles for Co-Designing DMHIs	21
2.5.3	A Methodological Contribution to Co-Design Practice	21
2.5.4	Limitations and Directions for Future Research	22
2.6	Conclusion	22

3	A Human-Factors Approach to Usability and Technology Acceptance	24
3.1	Introduction: From Co-Design to Formal Evaluation	24
3.2	Study 1: Enhancing Digital Mental Health Platforms: A Usability Exploration with Ergonomics Design Students	26
3.2.1	Introduction	26
3.2.2	Background and Related Work	27
3.2.3	Materials and Methods	28
3.2.4	Results	33
3.2.5	Discussion	38
3.2.6	Limitations	40
3.2.7	Conclusion and Future Research	41

II Architecting Engagement: Core Mechanisms and Interaction Paradigms 43

4	Designing for Motivation: Gamification, Persuasion, and the ETHICA Framework	45
4.1	Introduction: The Promise and Perils of Persuasive Technology	45
4.2	Study 1: Gamification in Digital Mental Health Interventions: A Systematic Review of the Engagement-Efficacy-Ethics Trilemma	46
4.2.1	Introduction	46
4.2.2	Theoretical Foundations of Gamification	48
4.2.3	Methodology of Literature Selection	49
4.2.4	The Engagement-Efficacy Gap: The First Tension of the Trilemma	51
4.2.5	The Ethical Landscape: The Second Tension of the Trilemma	54
4.2.6	AI as an Amplifier of the Trilemma	56
4.2.7	HCI as the Mediator of the Trilemma	57
4.2.8	Discussion	61
4.2.9	Conclusion	62
4.3	Study 2: Designing Ethical Persuasive Technologies for Digital Mental Health: The ETHICA Framework	63
4.3.1	Introduction	63
4.3.2	Materials and Methods	64
4.3.3	Results	67
4.3.4	Discussion	71
4.3.5	Conclusion	75
5	Dialogue for Wellbeing: Achieving Therapeutic Symmetry in Human-AI Interaction	76
5.1	Background and Structure	76
5.2	Study 1: The Asymmetric Dialogue: A Scoping Review of Design Paradigms in Conversational AI for Mental Health	77
5.2.1	Introduction to the Review	77
5.2.2	Method of Synthesis	82
5.2.3	Results: A Thematic Analysis of Chatbot Design Paradigms	82
5.2.4	Discussion: The Implications of Asymmetry and the Path Forward	88
5.2.5	Study 1 Conclusion	93

5.3	Study 2: Achieving Therapeutic Symmetry: A Framework for Designing and Evaluating Balanced Human-AI Interactions in Mental Health Chatbots	95
5.3.1	Introduction	95
5.3.2	Theoretical Foundations and Related Work	97
5.3.3	Study Design and Implementation	100
5.3.4	Results	110
5.3.5	Discussion	114
5.3.6	Study 2 Conclusion	118
5.4	Chapter General Discussion and Conclusion	118
5.4.1	A New Paradigm for Human-AI Collaboration in Therapy	118
5.4.2	Chapter Conclusion	119
6	TrailMap: Pheromone-Based Adaptive Peer Matching for Sustainable Online Support Communities	120
6.1	Introduction	120
6.1.1	The Scalability and Sustainability Crisis in Digital Peer Support	120
6.1.2	Biomimicry for Decentralised Optimisation: The Ant Colony Metaphor	121
6.1.3	The TrailMap Hypothesis and Contribution	122
6.1.4	Positioning TrailMap within Evolutionary Optimisation	123
6.2	The TrailMap Algorithm	124
6.2.1	System Model	124
6.2.2	Pheromone Deposition (Trail Reinforcement)	124
6.2.3	Path Selection (Probabilistic Routing)	125
6.2.4	Pheromone Evaporation (Trail Decay)	125
6.3	Materials and Methods	127
6.3.1	Study 1: Agent-Based Simulation	127
6.3.2	Study 2: Human-Centred Pilot Study	130
6.4	Results	131
6.4.1	Simulation Findings: Efficiency and Equity	131
6.4.2	Pilot Study Validation: Real-World Performance	133
6.5	Discussion	136
6.5.1	Principal Findings: From Efficiency to Ecosystem Sustainability	136
6.5.2	TrailMap as Problem-Driven Biomimicry	137
6.5.3	Ethical Implications and Algorithmic Governance	141
6.5.4	Limitations	141
6.6	Future Research and Conclusion	142
6.6.1	Future Directions for Digital Therapeutics and HCI	142
6.6.2	Conclusion	143

III Expanding the Frontier: Advanced Technologies and Equitable Design **145**

7	Designing Equitable and Embodied Interventions with Virtual Reality (VR)	147
7.1	Principles of Immersion and Presence	147
7.1.1	Embodiment in VR Experiences	147
7.1.2	Sensory and Cognitive Engagement	150

7.2	VR Interventions for Depression	152
7.2.1	Evidence from Clinical Trials	152
7.2.2	Mechanisms of Action in VR Therapy	154
7.2.3	Limitations and Challenges in Current Research	156
7.3	Equitable Design for VR-Based Therapeutics	158
7.3.1	Cost and Accessibility Barriers	158
7.3.2	Design for Diverse Populations	160
7.3.3	Scalable Deployment Strategies	162

IV Towards a Prognostic and Adaptive Future 165

8	The Self-Determined Adaptive Response (SDAR) System: Towards A Framework for Integrating AI and Personalised Gamification in Digital Mental Health - Protocol for a Three-Arm Randomised Controlled Trial	167
8.1	Introduction: The Imperative for Adaptive Digital Mental Health	167
8.1.1	The Scalability Imperative in Mental Healthcare	167
8.1.2	The Engagement-Efficacy Paradox	168
8.1.3	Thesis Statement: Towards Motivation-Centric, Adaptive Systems	169
8.2	Theoretical Foundations of Sustained Engagement	169
8.2.1	Self-Determination Theory (SDT): The 'Why' of Motivation and Engagement	170
8.2.2	The Fogg Behaviour Model (FBM): The 'How' of Action	170
8.3	Architecting Motivation: Gamification Frameworks and Evidence	172
8.3.1	The Promise and Pitfalls of Gamification	172
8.3.2	Beyond Points and Badges: The Octalysis Framework	173
8.3.3	Integrating Frameworks for Coherent Design	174
8.4	The Intelligence Layer: Dynamic Personalisation with Reinforcement Learning	176
8.4.1	The Limits of Static and Rule-Based Personalisation	176
8.4.2	Reinforcement Learning (RL) for Therapy Optimisation	176
8.4.3	Dynamic Difficulty Adjustment (DDA) as a Core RL Application	177
8.5	A Proposed Synthesis: The Self-Determined Adaptive Response (SDAR) Framework	180
8.5.1	SDAR Conceptual Architecture	180
8.5.2	Mechanism of Action: A User Journey	181
8.5.3	Defining the Reward Function	182
8.6	A Methodological Blueprint for Validation: An RCT Protocol	182
8.6.1	Trial Rationale and Objectives	183
8.6.2	Trial Design and Participants	183
8.6.3	Outcomes and Measures	184
8.6.4	Reporting and Transparency: Adherence to CONSORT-AI	185
8.7	Discussion	187
8.7.1	Synthesis and Implications	187
8.7.2	Ethical Considerations and Algorithmic Bias	187
8.7.3	Implementation Challenges and Clinical Integration	188
8.8	Conclusion and Future Directions	188

8.8.1	Summary of Contributions	188
8.8.2	Future Research Directions	189
9	From Diagnosis to Prognosis: A Dynamic Systems Framework for Forecasting Clinical Trajectories	190
9.1	Introduction: The "Trial-and-Error" Problem in Psychiatry	190
9.2	Study 1: A Prognostic Theory of Treatment Response: A Dynamic Systems Framework for Forecasting Clinical Trajectories	192
9.2.1	Introduction	192
9.2.2	The Limits of the Current Static Prediction Paradigm	193
9.2.3	A New Paradigm from Engineering: Damage Prognosis	196
9.2.4	A Prognostic Theory of Treatment Response	198
9.2.5	The "How": Propositions of the Prognostic Framework	201
9.2.6	Causal Mechanisms and Multi-Level Integration	203
9.2.7	Implications, Future Directions, and a Research Agenda	205
9.2.8	Methodological Implications	206
9.3	Study 2: A Methodological Framework for Forecasting Individual Clinical Trajectories: Operationalising a Prognostic Theory of Mental Health Treatment Response with Deep Learning	212
9.3.1	Introduction	212
9.3.2	From Theory to Data: Operationalising the Prognostic Constructs	215
9.3.3	A Dynamic Forecasting Architecture for the Predicted Recovery Trajectory	222
9.3.4	Bridging the Translational Gap: A Blueprint for Responsible Implementation	227
9.3.5	Discussion	233
10	General Discussion and Conclusions	236
10.1	Synthesis of Findings	236
10.1.1	The Primacy of Trust and Cognitive Ergonomics	237
10.1.2	Architecting Ethical Engagement	237
10.1.3	Expanding the Frontier: Equity in Immersive Tech	237
10.1.4	The Shift to Prognostic and Adaptive Care	237
10.2	Principal Contributions	238
10.3	Scope, Boundaries, and Positioning of Contributions	240
10.4	Implications for Research and Practice	240
10.4.1	For Designers and Developers	240
10.4.2	For Clinicians and Healthcare Providers	241
10.4.3	For Policymakers and Regulators	241
10.5	Limitations of the Research	241
10.6	Agenda for Future Research	241
10.7	Concluding Remarks	243
