

Contents

Abstract	iii
Contents	xiii
Acronyms	xix
1 Introduction	1
1.1 Terrestrial broadcasting development	1
1.2 Simultaneous Mobile and Fixed Services Delivery	6
1.2.1 Problem Statement	8
1.3 Objectives and Scope	9
1.4 State-of-the-Art	11
1.5 Thesis Outline and Contributions	16
1.6 List of Contributions	21
2 Optimal Demappers for Multi-Layer Broadcast Systems	25
2.1 Introduction	26

2.2	Constellation Demapper Alternatives in Multi-layer Systems	28
2.2.1	GD Approach	28
2.2.2	OD Approach.	30
2.2.3	Demappers Complexity.	31
2.3	Information-Theoretical Analysis of BICM systems	32
2.3.1	Error Exponent Analysis.	32
2.3.2	I-curves	35
2.3.3	Generalized Mutual Information Analysis	37
2.4	Performance Analysis	37
2.4.1	Performance of top-layer signal (x_t) in AWGN channel	38
2.4.2	Performance of top-layer signal (x_t) in i.i.d. Rayleigh channel	41
2.4.3	Performance of bottom-layer signal x_b	43
2.5	Conclusions.	46
3	Scattered Pilot Performance and Optimization for ATSC 3.0	49
3.1	Introduction	50
3.2	ATSC 3.0 Waveform Overview	52
3.3	Channel Estimation in ATSC 3.0	53
3.3.1	Scattered Pilot Configuration assumed at Transmitters	53
3.3.2	Channel Estimator implemented at Receivers	58
3.3.3	Channel Estimation in LDM	60
3.4	Methodology and Simulation Setup.	62
3.5	Simulation results	63
3.5.1	FFT size and TIL depth impact in TDM systems	63
3.5.2	SP and Pilot Boosting impact for TDM systems	64
3.5.3	SP and Pilot Boosting impact for LDM systems	68
3.6	Conclusions.	75
4	Layered Division Multiplexing with Multi-Radio Frequency Channel Technologies	77
4.1	Introduction	78
4.2	Overview of Technologies.	79
4.2.1	Layered Division Multiplexing (LDM).	79

4.2.2 Channel Bonding (CB)	81
4.2.3 Time Frequency Slicing (TFS)	82
4.3 Use Cases for LDM and MultiRF Channel	83
4.3.1 Increased Peak Service Data-rate.	84
4.3.2 StatMux Gain	84
4.3.3 Increased RF Performance.	85
4.4 Implementation Aspects of LDM with MultiRF Channel Technologies	86
4.4.1 LDM with TFS	86
4.4.2 LDM with Channel Bonding	89
4.5 Methodology and Simulation Setup.	90
4.6 LDM and MultiRF Channel Performance Evaluation	93
4.6.1 LDM EL and MultiRF performance for fixed reception. Influence of the TIL scheme	93
4.6.2 LDM CL and MultiRF performance for mobile reception	94
4.7 Conclusions.	97

5 Layered Division Multiplexing with Distributed Multiple-Input Single-Output Schemes 99

5.1 Introduction	100
5.2 MISO Background	102
5.2.1 Frequency pre-distortion	102
5.2.2 Space-Time/Frequency Block Coding (ST/FBC)	103
5.3 Implementation Aspects of LDM with MISO schemes on ATSC 3.0	105
5.3.1 LDM with MISO TDCFS	105
5.3.2 LDM with MISO Alamouti	106
5.4 Methodology and Simulation Setup.	107
5.4.1 Methodology	107
5.4.2 Transmission Setup	108
5.4.3 SFN scenarios	109
5.4.4 Receiver configuration	110
5.5 LDM and distributed MISO Performance Evaluation	113
5.5.1 Core Layer Performance	115
5.5.2 Enhanced Layer Performance	117
5.5.3 Influence of Injection Level (Δ).	120

5.6 Conclusions	121
6 Layered Division Multiplexing with Co-Located Multiple-Input Multiple-Output Schemes	123
6.1 Introduction	124
6.2 MIMO in Terrestrial Broadcasting	125
6.2.1 TDCFS in ATSC 3.0	126
6.2.2 MIMO in ATSC 3.0	127
6.3 Potential co-located MIMO and LDM use cases	129
6.3.1 Mobile receivers with one antenna	129
6.3.2 Mobile receivers with two antennas	130
6.4 Implementation Aspects of LDM with co-located MIMO schemes.	131
6.4.1 Mobile receivers block diagrams	132
6.4.2 Fixed receivers block diagrams	133
6.4.3 Receivers blocks complexity	133
6.5 Methodology and Simulation Setup	140
6.5.1 Transmitter Setup	140
6.5.2 Channel models	141
6.5.3 Receiver Setup	141
6.6 LDM and co-located MIMO Performance Evaluation	141
6.6.1 Mean Square Error of Channel Estimation	143
6.6.2 CL Performance	144
6.6.3 EL Performance	147
6.7 Conclusions	148
7 Results Discussions	153
7.1 Performance Evaluation	153
7.1.1 BICM Impact	154
7.1.2 TIL Impact	156
7.1.3 PP Impact	159
7.1.4 MISO Impact	162
7.1.5 FFT Impact	164
7.1.6 MIMO Impact	165

7.2 Implementation Aspects	168
7.2.1 Tuner	168
7.2.2 Channel Estimator	168
7.2.3 Equalizer	172
7.2.4 TDIL.	172
7.2.5 Cell Re-Exchanger.	173
7.2.6 LDM Buffer.	173
7.2.7 Demapping	174
7.2.8 LDPC decoding	174
7.2.9 MIMO	174
8 Conclusions and Future Work	177
8.1 Concluding Remarks.	178
8.1.1 Baseline optimization	178
8.1.2 Joint LDM and advanced technologies transmissions.	180
8.2 Recommendations for Advanced LDM transmissions	182
8.3 Future Research Topics.	184
8.3.1 Further studies of LDM with co-located MIMO schemes	184
8.3.2 N-LDM and LDM Segmentation	184
8.3.3 SIC processing for Wideband Broadcasting	185
8.3.4 NOM for 5G Mobile Systems	186
Bibliography	187
