Abstract V
Resumen IX
Resum XIII
Chapter 1: Introduction 21
1.1. Hypothesis, objectives and assumptions 24
1.1.1. Hypotheses 24
1.1.2. Objectives 25
1.1.3. Assumptions and simplifications 26
1.2. Organisation of the document 27
1.3. Description of the variables 28
Chapter 2: State of the art 33
2.1. Pumping operating optimisation models 33
2.2. Hydraulic Models 36
2.3. Optimisation algorithms 39
2.3.1. Hooke and Jeeves algorithm 40
2.3.2. Nelder and Mead Algorithm 44
2.3.3. Differential evolution algorithm 49
2.4. System head curves 54
2.4.1. Resistance Curve 55
2.4.2. Setpoint Curve 61
2.4.3. Similarities and differences between the resistance curve and the setpoint curve 66
Chapter 3: Methodology for the setpoint curve calculation 69
3.1. Setpoint curve for a network with just one pumping station, without storage capacity, and non-pressure-driven demands 70
3.2. Setpoint curve for a network with just one pumping station, without storage capacity, and pressure-driven demands 76

3.3. Setpoint curve for a network with more than one pumping station, without storage capacity, and non-pressure-driven demands 83
3.4. Setpoint curve for a network with more than one pumping station, without storage capacity, and pressure-driven demands 92
3.5. Problem associated with the flow distribution among pumping stations 98
Chapter 4: Energy optimisation without storage capacity 101
4.1. Problem formulation 102
4.2. Discrete Method 104
4.3. Continuous Method 109
4.3.1. Application of search algorithm Hooke and Jeeves 110
4.3.2. Application of search algorithm Nelder and Mead 113
4.4. Sensitivity of the flow distribution among the pumping stations of a network 116
4.4.1. Pipelines length 119
4.4.2. Flow demands 122
4.4.3. Nodes elevation 123
4.4.4. Minimum pressure head required 127
4.4.5. Roughness 127
4.4.6. Diameter 128
4.4.7. Key findings of the sensitivity analysis 129
4.5. Cases study 130
4.5.1. TF network 130
4.5.2. Catinen Network 140
4.5.3. COPLACA network 145
Chapter 5: Cost optimisation without storage capacity 151
5.1. Objective function 153
5.2. Energy tariffs 155
5.3. Cases study 156
5.3.1. TF network 156
5.3.2. COPLACA network 167

Chapter 6: Energy and cost optimisation with storage capacity 171
6.1. Objective Function 175
6.2. Optimisation Method 179
6.2.1. Hybrid algorithm 180
6.2.2. Optimisation process 184
6.3. Cases study 188
6.3.1. Anytown network 189
6.3.2. Richmond network 199
Chapter 7: Conclusions 210
7.1. The setpoint curve calculation 210
7.2. Energy optimisation approach without storage capacity 211
7.3. Cost optimisation approach without storage capacity 213
7.4. Energy and cost optimisation with storage capacity 214
7.5. Optimisation algorithms applied 216
7.6. Cases study 217
7.6.1. Energy optimisation without storage capacity 217
7.6.2. Cost optimisation without storage capacity 218
7.6.3. Energy and cost optimisation with storage capacity 218
7.7. Future developments 220
7.8. Quality indicators 222
