<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Computer vision systems . . . . .	1
1.2	Image segmentation . . . . .	2
1.3	Motivation . . . . .	3
1.4	Goals . . . . .	4
1.5	Contributions . . . . .	5
1.6	Organization . . . . .	6
<b>2</b>	<b>Image segmentation</b>	<b>7</b>
2.1	Introduction . . . . .	7
2.2	Notation and definitions . . . . .	8
2.3	Preprocessing techniques . . . . .	10
2.3.1	Sobel operator. . . . .	10
2.3.2	Top-hat transform. . . . .	11
2.4	Segmentation algorithms . . . . .	12
2.4.1	Global thresholding . . . . .	12
2.4.2	Otsu's method . . . . .	14
2.4.3	Local Adaptive Thresholding (LAT) . . . . .	14
2.4.4	Watershed . . . . .	15
2.4.5	Local variation . . . . .	16
2.5	Conclusions . . . . .	17
<b>3</b>	<b>Background modelling and motion segmentation</b>	<b>19</b>
3.1	Introduction . . . . .	19
3.2	Notation and definitions . . . . .	20
3.3	Background modelling . . . . .	22
3.3.1	Adjacent frame differencing . . . . .	25
3.3.2	Running Gaussian average . . . . .	25
3.3.3	Mixture of Gaussians (MoG) . . . . .	26
3.3.4	Kernel density estimation (KDE) . . . . .	28
3.3.5	Sequential kernel density approximation . . . . .	28
3.3.6	Temporal median filter . . . . .	29
3.3.7	Eigenbackgrounds . . . . .	29
3.3.8	Cooccurrence of image variations . . . . .	30
3.3.9	Local Binary Patterns . . . . .	31
3.3.10	Wallflower . . . . .	33
3.3.11	Edges histograms . . . . .	34
3.3.12	Salient motion . . . . .	35

3.4	Motion segmentation algorithms . . . . .	36
3.4.1	Temporal differencing . . . . .	36
3.4.2	Background subtraction . . . . .	37
3.4.3	Optical flow . . . . .	39
3.4.4	Other methods . . . . .	39
3.5	Shadow removal techniques . . . . .	39
3.5.1	Non-model deterministic methods . . . . .	40
3.6	Conclusions . . . . .	41
<b>4</b>	<b>Character identification in containers</b>	<b>43</b>
4.1	Introduction . . . . .	43
4.1.1	Related work . . . . .	44
4.1.2	Goals and constraints . . . . .	45
4.2	Proposed schema . . . . .	46
4.3	Preprocessing . . . . .	47
4.4	Testing different segmentation approaches . . . . .	47
4.4.1	A new version for local variation algorithm . . . . .	48
4.4.2	Data set . . . . .	48
4.4.3	Parameter set . . . . .	50
4.4.4	Evaluation criterion . . . . .	51
4.4.5	Experiments . . . . .	51
4.5	Filters proposed for noise reduction . . . . .	55
4.5.1	Size filter . . . . .	56
4.5.2	Contrast filter . . . . .	56
4.5.3	Classification . . . . .	57
4.5.4	Confidence filter . . . . .	57
4.5.5	Fusion filter . . . . .	57
4.5.6	Position filter . . . . .	58
4.5.7	Decision of the tone of the characters . . . . .	58
4.5.8	Code extraction . . . . .	59
4.5.9	Filtering segmentation results . . . . .	59
4.5.10	Code extraction results . . . . .	60
4.6	Use of sequences of images . . . . .	64
4.6.1	Clustering objects . . . . .	64
4.6.2	Processing a sequence . . . . .	66
4.6.3	Experiments . . . . .	66
4.7	Conclusions . . . . .	68
<b>5</b>	<b>Low level vision developments for SENSE</b>	<b>69</b>
5.1	Introduction . . . . .	69
5.1.1	Goals and constraints . . . . .	70
5.1.2	SENSE project . . . . .	70
5.2	Proposed processing for video modality . . . . .	72
5.3	Background modelling . . . . .	74
5.4	Segmentation . . . . .	75
5.5	Filters . . . . .	75
5.6	Feature selection . . . . .	76
5.6.1	Geometric features . . . . .	76
5.6.2	Foreground pixel density . . . . .	77
5.6.3	Number of heads . . . . .	78

5.7	Object tracking . . . . .	79
5.8	Blob dataset . . . . .	83
5.8.1	Evaluation of features with blob dataset . . . . .	84
5.8.2	Experiments with geometric features . . . . .	85
5.8.3	Experiments with foreground pixel density features . . . . .	86
5.8.4	Foreground density with different granularity . . . . .	90
5.8.5	Experiments with head detection algorithm . . . . .	92
5.9	Experiments with sequences . . . . .	96
5.10	Conclusions . . . . .	97
<b>6</b>	<b>Background modelling and object detection</b>	<b>99</b>
6.1	Introduction . . . . .	99
6.1.1	Goals and constraints . . . . .	100
6.2	Background adaptive with confidence (BAC) . . . . .	101
6.2.1	Similarity criteria between two grey pixels . . . . .	101
6.2.2	Motion and similarity with the background . . . . .	102
6.2.3	Segmentation process . . . . .	102
6.2.4	Model update . . . . .	104
6.2.5	Segmentation confidence . . . . .	106
6.2.6	Corrupt model . . . . .	106
6.2.7	Results obtained with a particular sequence . . . . .	108
6.3	BAC with colour coordinates . . . . .	109
6.3.1	Extension to RGB . . . . .	109
6.4	MBAC . . . . .	110
6.4.1	Segmentation process with MBAC . . . . .	110
6.4.2	Corrupt model . . . . .	112
6.4.3	Model update . . . . .	112
6.5	Fuzzy background subtraction (FBS) . . . . .	113
6.5.1	Empirical results . . . . .	114
6.5.2	Computation of membership functions . . . . .	115
6.5.3	Pixel level processing . . . . .	122
6.5.4	Foreground recovery . . . . .	123
6.5.5	Model corruption detection . . . . .	123
6.5.6	Model update . . . . .	124
6.6	Experiments . . . . .	125
6.6.1	The Wallflower benchmark . . . . .	127
6.6.2	Analysis of BAC and MBAC parameters . . . . .	127
6.6.3	Analysis of FBS parameters . . . . .	132
6.6.4	The FBS algorithm versus the BAC, MBAC algorithms . . . . .	133
6.6.5	Our proposal compared to the literature algorithms . . . . .	134
6.6.6	Temporal analysis of algorithms . . . . .	135
6.6.7	Space complexity of the algorithms . . . . .	136
6.6.8	Combining BAC and the FBS algorithm . . . . .	137
6.6.9	Combining the algorithms with a classifier . . . . .	140
6.7	Conclusions . . . . .	141
<b>7</b>	<b>Conclusions and future works</b>	<b>143</b>
7.1	Conclusions . . . . .	143
7.2	Future works . . . . .	146

<b>A Morphological operators</b>	<b>147</b>
<b>B Object classification</b>	<b>149</b>
B.1 Feature sets for characters recognition . . . . .	150
B.1.1 Database preprocessing . . . . .	150
B.1.2 Equalization . . . . .	151
B.1.3 Cropping . . . . .	151
B.1.4 Scaling . . . . .	152
B.1.5 PCA . . . . .	152
B.2 Training . . . . .	153
B.3 $k$ -NN confidence computation . . . . .	153
