

TABLE OF CONTENTS

LIST OF ACRONYMS	33
INTRODUCTION	35
1. Current situation of bioplastics	37
2. Bio-based biodegradable materials for food packaging	40
2.1. Plastics from bacteria (polyhydroxyalkanoates). In <i>Sustainability of Plastic Materials</i> (2018). Ed. DeGruyter. Raquel Requena; María Vargas; Amparo Chiralt.	40
2.1.1. PHA synthesis.....	41
2.1.2. PHA applications	44
2.1.3. Properties of PHA-based packaging materials.....	49
2.1.4. PHA-based multiphase materials.....	53
2.2. Polylactic acid	66
2.3. Starch.....	67
3. Antimicrobial packaging.....	67
3.1. Plant-food by-products as antimicrobials	68
3.1.1. Phenolics	68
3.1.2. Essential oils.....	69
3.1.3. Xylans	70
3.2. Biopolymers carrying essential oils for food antimicrobial packaging. <i>Current Organic Chemistry</i> (2017) 21, 1-16. Raquel Requena; Lorena Atarés; María Vargas; Amparo Chiralt.	71
3.2.1. Antimicrobial properties of essential oils	71
3.2.2. Incorporation methods of essential oils into polymer matrices	77
3.2.3. Impact of essential oils on the film functional properties.....	81
3.2.4. Release of essential oils from the polymer matrices into food or food simulants	85
3.2.5. Food applications of active biopolymer films containing essential oils	90
References.....	94
OBJECTIVES	119
CHAPTERS.....	123

I. Effect of plasticizers on thermal and physical properties of compression-moulded poly[(3-hydroxybutyrate)-co-(3-hydroxyvalerate)] films	127
ABSTRACT	129
1. INTRODUCTION	130
2. MATERIALS AND METHODS	131
2.1. Materials.....	131
2.2. Preparation of films	131
2.3. Film characterization	132
2.3.1. <i>Film thickness</i>	132
2.3.2. <i>Scanning electron microscopy</i>	132
2.3.3. <i>Optical properties</i>	132
2.3.4. <i>Moisture content</i>	133
2.3.5. <i>Water vapour permeability</i>	133
2.3.6. <i>Tensile properties</i>	134
2.3.7. <i>Film water solubility</i>	134
2.3.8. <i>Water sorption isotherms</i>	134
2.3.9. <i>Differential scanning calorimetry (DSC)</i>	135
2.3.10. <i>Thermogravimetric analysis (TGA)</i>	135
2.3.11. <i>Statistical analysis</i>	135
3. RESULTS AND DISCUSSION	136
3.1. Microstructure and thermal behaviour of plasticized and non-plasticized films.	136
3.2. Effect of plasticizers on tensile properties of the films.....	141
3.3. Effect of plasticizers on water affinity of the films.....	142
3.4. Optical properties of plasticized and non-plasticized films	144
4. CONCLUSIONS	145
REFERENCES	146
II. Poly[(3-hydroxybutyrate)-co-(3-hydroxyvalerate)] active bilayer films obtained by compression moulding and applying essential oils at the interface	149
ABSTRACT	151
1. INTRODUCTION	152
2. MATERIALS AND METHODS	153
2.1. Materials.....	153

2.2. Preparation of films	153
2.2.1. Preparation of PHBV films.....	153
2.2.2. Incorporation of active compounds into bilayer structures.....	153
2.3. Film characterization	154
2.3.1. Retention of active compounds	154
2.3.2. Scanning electron microscopy.....	154
2.3.3. Optical properties.....	154
2.3.4. Tensile properties	155
2.3.5. Water vapour permeability (WVP)	156
2.3.6. Thermal properties.....	156
2.3.7. Antimicrobial activity	156
2.3.8. Statistical analysis	157
3. RESULTS AND DISCUSSION	157
3.1. Active compound retention in films.....	157
3.2. Film microstructure	158
3.3. Optical properties.....	158
3.4. Tensile properties	160
3.5. Water vapour permeability	162
3.6. Thermal behaviour	162
3.7. Antimicrobial properties.....	167
4. CONCLUSIONS	169
REFERENCES	170

III. Release kinetics of carvacrol and eugenol from poly (hydroxybutyrate-co-hydroxyvalerate) (PHBV) films for food packaging applications173

ABSTRACT	175
1. INTRODUCTION	176
2. MATERIALS AND METHODS	177
2.1. Materials.....	177
2.2. Film preparation	177
2.2.1. PHBV monolayer films.....	177
2.2.2. Active PHBV bilayer films	177
2.3. Analysis of the retention of active compound in the films	178

2.4. Kinetics of CA and EU release in food simulants	178
2.4.1 <i>Mathematical modelling of CA and EU release</i>	179
2.4.2. <i>Prediction of antimicrobial action of the films from release kinetics.</i>	180
2.5. Overall migration of active PHBV bilayer films.....	180
2.6. Statistical analysis	181
3. RESULTS AND DISCUSSION	181
3.1. Concentration of active compounds in the films	181
3.2. Release kinetics of CA and EU in food simulants	181
3.3. Active release prediction over the storage time.....	185
3.4. Overall migration of active PHBV bilayer films.....	187
4. CONCLUSION	189
REFERENCES	191
IV. Study of the potential synergistic antibacterial activity of essential oil components using the thiazolyl blue tetrazolium bromide (MTT) assay	195
ABSTRACT	197
1. INTRODUCTION	198
2. MATERIALS AND METHODS	200
2.1. Reagents and bacterial strains	200
2.2. MIC assessment and combined antimicrobial effects.....	200
3. RESULTS AND DISCUSSION	203
3.1. Minimum inhibitory concentration	203
3.2. Interactions between components in binary active compound mixtures	204
4. CONCLUSIONS	208
REFERENCES	209
V. Eugenol and carvacrol migration from PHBV films and antibacterial action in different food matrices	213
ABSTRACT	215
1. INTRODUCTION	216
2. MATERIALS AND METHODS	218
2.1. Materials and reagents.....	218
2.2. Film preparation	218
2.3. Physicochemical analysis of raw materials.....	218

2.4. Antibacterial effectiveness of active films: <i>in vitro</i> and <i>in vivo</i> tests	219
2.4.1. <i>Processing of food matrices</i>	219
2.4.2. <i>Antibacterial activity assessment</i>	219
2.6. CA and EU migration to the food matrices.....	220
2.6.1. <i>Quantification in the films by methanol extraction</i>	220
2.6.2. <i>Analyses in the food matrices by Gas chromatography–mass spectrometry (GC-MS)</i>	220
2.7. Statistical analyses.....	221
3. RESULTS AND DISCUSSION	222
3.1. Characterization of raw materials	222
3.2. Antibacterial effect of active films at 4 °C.....	222
3.3. Antibacterial effect of active films at 10 °C	224
3.3.1. <i>Antibacterial effect of active films in high-protein food</i>	224
3.3.2. <i>Antibacterial effect of active films in plant food</i>	225
3.4. Cuantification of CA and EU migration to the food matrices.....	228
4. CONCLUSION	230
REFERENCES	232
VI. Obtaining antimicrobial bilayer starch and polyester-blend films with carvacrol.....	237
ABSTRACT	239
1. INTRODUCTION	240
2. MATERIALS AND METHODS	241
2.1. Materials and reagents.....	241
2.2. Film preparation	242
2.2.1. <i>Preparation of polyester monolayer films by thermo-compression (T-PLA:PHBV:PEG)</i>	242
2.2.2. <i>Preparation of polyester monolayer films by casting (C-75:25:15 and C-75:25:15-CA)</i>	243
2.2.3. <i>Preparation of starch monolayer films by compression-moulding (S)</i>	243
2.2.4. <i>Preparation of active starch-polyester bilayer films (TP-S, TP-CA-S, CP-S, CP(CA)-S)</i>	243
2.3. Film characterization	244
2.3.1. <i>Analysis of the CA retention in the films</i>	244
2.3.2. <i>Thermal behaviour</i>	244

2.3.3. Tensile properties	245
2.3.4. Water vapour permeability	245
2.3.5. Release kinetics of CA in food simulants	245
2.3.6. Antibacterial activity assessment	246
2.3.7. Statistical analyses	247
3. RESULTS AND DISCUSSION	247
3.1. Properties of the polyester blend monolayer films	247
3.1.1. Physical properties	247
3.1.2. Thermal behaviour	249
3.2. Characterization of polyester-starch bilayer films	256
3.2.1. CA retention in bilayer films	256
3.2.2. Physical properties	257
3.2.3. Thermal properties	258
3.2.4. Release kinetics of CA and antimicrobial activity	259
4. CONCLUSION	267
REFERENCES	268
VII. Valorization of rice husks into bioactive xylans and cellulose nanocrystals, using sequential subcritical water extraction.....	273
ABSTRACT	275
1. INTRODUCTION	276
2. MATERIALS AND METHODS	278
2.1. Materials and reagents.....	278
2.2. Bioprocess design	278
2.2.1. Hemicellulose isolation	278
2.2.2. Isolation of cellulose nanocrystals	279
2.3. Characterization of the materials obtained throughout the valorization processes..	280
2.3.1. Characterization of the alkali and SWE soluble extracts	280
2.3.2. Characterization of the insoluble fractions from macro to nano dimensions	282
3. RESULTS AND DISCUSSION	284
3.1. Characterization of extracts	286
3.1.1. Chemical composition of the hemicellulosic extracts	286
3.1.2. Functional properties of the hemicellulosic extracts	288

3.2. Characterization of the insoluble fraction from macro to nano dimensions.....	290
3.2.2. <i>Chemical composition of the insoluble fractions</i>	290
3.2.3. <i>Micro and nano-structural analyses</i>	291
3.2.4. <i>Crystalline structure analysis</i>	294
3.2.5. <i>Chemical structure analysis</i>	295
3.2.6. <i>Thermogravimetric analysis</i>	296
4. CONCLUSION	298
REFERENCES	299
GENERAL DISCUSSION.....	305
CONCLUSIONS	317
