Abstract	v
Resumen	vii
Resum	ix
Contents	xi
List of Figures	xiv
List of Tables	xvii
List of Algorithms	xx
1 Introduction	1
1.1 Background.	1
1.2 Motivation	4
1.3 Objectives.	6
1.4 Organization and key contributions of the Thesis.	7

2 Nonnegative factorizations: definition and algorithms	11
2.1 Nonnegative least squares problem	11
2.2 Nonnegative Matrix factorization	12
2.3 Algorithms to solve the Nonnegative Least Squares problem.	13
2.4 Algorithms for the NonNegative Matrix Factorization.	18
3 High performance computing technologies	31
3.1 High performance computing basics	31
3.2 Current HPC architectures	32
3.3 HPC software technologies	39
4 Existing NNMFPack HPC library	47
4.1 Library overview.	47
4.2 Technologies under the hood.	48
4.3 Implemented algorithms	49
5 Updating the solution of Nonnegative least squares problems	51
5.1 Introduction	51
5.2 Column modifications of NNLS.	53
5.3 Row modifications of NNLS.	57
5.4 Adding low-rank matrices to NNLS.	61
5.5 Empirical analysis of the proposed algorithms	62
5.6 Conclusion	70
6 Updating the Non-negative matrix factorization	71
6.1 Introduction	71
6.2 Description of the NMF updating problem	72
6.3 Algorithmic approach.	73
6.4 Proposed solutions	75
6.5 Experimental analysis.	79
6.6 Conclusions	88

7 Efficient implementation of Active-Set Newton Algorithm for Non-Negative representations	89
7.1 Introduction and motivation	89
7.2 ASNA algorithm	91
7.3 Proposed algorithms.	95
7.4 Analysed problem	97
7.5 Experimental analysis.	97
7.6 Discussion	100
8 Implementations developed	103
8.1 Sparsity and smoothness constrained multiplicative algorithms	103
8.2 Affine NMF	105
8.3 Greedy Coordinate Descent (GCD) algorithm	106
8.4 ANLS-BPP	107
8.5 HALS algorithm	109
8.6 fHALS algorithm: CPU and GPU implementations	110
9 Experimental Evaluation	115
9.1 Beta parameter evaluation	115
9.2 Experimental comparison of the proposed implementations	123
9.3 fHALS GPU evaluation.	131
9.4 Conclusions	135
10 Improved NNMFPack library	137
10.1 Library overview	137
10.2 Implemented algorithms	138
11 Conclusions	143
11.1 Updating of Nonnegative factorizations	143
11.2 Implementation of algorithms to solve nonnegative factorizations	144
11.3 Application of the developed solutions	145
11.4 Publications and conferences.	147

11.5 Future work	148
11.6 Institutional support	149
A Execution environments	151
A.1 Server 1.	151
A.2 Server 2.	152
A.3 Server 3.	152
A.4 Server 4.	153
A.5 Workstation	153
Bibliography	155
