

Table of contents

1	Introduction	1
1.1	Millimeter Wave Band	3
1.2	SATCOM	6
1.2.1	Gap Waveguide Technology	19
1.3	Objectives	32
1.4	Methodology	33
1.5	Structure of the Thesis	34
2	Corporate feeding networks based on Gap Waveguide	37
2.1	Bed of nails	37
2.2	Other AMC Realizations	44
2.3	Contactless feature of GW	51
2.4	GGW Corporate-feed networks	55
2.4.1	H-plane coupling layer	55
2.4.2	H-plane feeding networks in GGW	57
2.4.3	E-plane feeding networks in GGW	59
2.5	RGW corporate-feed networks	62
2.6	GGW-RGW corporate-feed networks	65
3	Radiating elements for Gap Waveguide Arrays	73
3.1	Slots fed by Coaxial Cavities	75
3.1.1	Coaxial Cavities in Gap Waveguide	77
3.1.2	Groove Gap Waveguide feeding	79
3.1.3	Ridge Gap Waveguide feeding	83
3.1.4	GGW-RGW feeding	85
3.1.5	Dual-Band Antennas	86
3.2	Cylindrical Cavities	93
3.2.1	Cylindrical Cavities fed by GGW	96
3.2.2	Cylindrical Cavities fed by RGW	97
3.2.3	Chamfered Cylindrical Cavities	100

TABLE OF CONTENTS

3.2.4	Dual-Polarized Cavities	101
3.2.5	Dual-Band Cavities	103
4	Gap Waveguide Array Antennas	109
4.1	16×16 Single-Layer Array Antenna in V-band	110
4.2	8×8 Single-Layer Cavity-Backed Slot Array Antenna	121
4.3	4×4 Single-Layer Circularly-Polarized Array Antenna	129
4.4	8×8 Dual-Polarized Array Antenna	137
4.5	8×8 Single-Layer Dual-Band Cavity-Backed Slot Array Antenna	148
4.6	8×8 Dual-Band Array Antenna using Cylindrical Cavities . . .	157
5	Conclusions and Future Work	163
A	Technical Results	167
A.1	JCR Indexed journals	167
A.2	International Conferences	168
A.3	National Conferences	170
A.4	Other publications	171
A.4.1	JCR Indexed journals	171
A.5	Projects	171
A.6	Patents	172
A.7	Awards	172
	References	173
