Agradecimientos	V
Abstract	VII
Resumen	IX
Resum	XI
Contents	XIII
List of Figures	XVII
List of Tables	XXI
1 Introduction	1
1.1 Background	1
1.2 Motivation	2
1.3 Outline of this thesis	3
1.3.1 Objectives	3
1.3.2 Methodology	4
1.3.3 Thesis structure	5
1.3.4 List of publications	5
2 Hydraulic modeling during filling and emptying processes in pressurized pipelines:	
A literature review	9
2.1 Abstract	9
2.2 Introduction	10
2.3 Understanding of filling and emptying processes	11
2.4 Review of mathematical models	13
2.4.1 Water phase	15
2.4.2 Air phase	18
2.4.3 Summary of mathematical models and methods of resolution	21
2.5 Uncertainty of current models and prospects	23
2.5.1 Friction factor	24
2.5.2 Polytropic coefficient	25
2.5.3 Air pocket size	26
2.5.4 Air valves behavior	26
2.6 Practical considerations	27

2.6.1	General practices	27
2.6.2	Air valves selection	27
2.6.3	Typical pipe selection practices	27
2.7	Future research	28
2.8	Conclusions	29
3	Transient phenomena during the emptying process of a single pipe with water-air interaction	31
3.1	Abstract	31
3.2	Introduction	32
3.3	Mathematical model	33
3.3.1	Case No. 1: A simple pipe with the upstream end closed	33
3.3.2	Case No. 2: A simple pipe with an air valve installed in the upstream end	36
3.4	Model verification	37
3.5	Case study and results	49
3.5.1	Case No. 1: A simple pipe with the upstream end closed	49
3.5.2	Case No. 2: A simple pipe with an air valve installed in the upstream end	51
3.5.3	Sensitivity analysis	53
3.6	Conclusions	58
4	Subatmospheric pressure in a water draining pipeline with an air pocket	61
4.1	Abstract	61
4.2	Introduction	62
4.3	Mathematical model	62
4.3.1	Governing assumptions	63
4.3.2	Equations	64
4.4	Model verification	65
4.4.1	Description of experimental facility	65
4.4.2	Conceptual description of the hydraulic event and limitations of the mathematical model	66
4.4.3	Proposed model definition	67
4.4.4	Results and discussion	67
4.5	Case study and results	76
4.5.1	Description of case study	76
4.5.2	Proposed model definition	76
4.5.3	Results	78
4.6	Conclusions	80

5	Experimental and numerical analysis of a water emptying pipeline using different air valves	83
5.1	Abstract	83
5.2	Introduction	84
5.3	Mathematical model	85
5.3.1	Equations for the water phase	86
5.3.2	Equations for air pockets	86
5.3.3	Initial and boundary conditions	88
5.3.4	Gravity term	88
5.4	Model verification	88
5.4.1	Experimental model	88
5.4.2	Proposed model definition	90
5.4.3	Experimental results	92
5.4.4	Sensitivity analysis	98
5.5	Case study and results	98
5.5.1	Description of case study	98
5.5.2	Proposed model definition	101
5.5.3	Results	104
5.6	Conclusions	106
6	Rigid water column model for simulating the emptying process in a pipeline using pressurized air	109
6.1	Abstract	109
6.2	Introduction	110
6.3	Mathematical model	110
6.3.1	Equations	111
6.3.2	Initial and boundary conditions	112
6.3.3	Gravity term	112
6.3.4	Pressure inside of pipeline	112
6.4	Numerical model validation	113
6.4.1	Proposed model verification	114
6.4.2	Influence of the length of the steel pipe	118
6.5	Conclusions	119
7	Emptying operation of water supply networks	121
7.1	Abstract	121
7.2	Introduction	122
7.3	Pipeline description	124
7.4	Application of the proposed model	127
7.4.1	Equations	128
7.4.2	Initial and boundary conditions	129
7.4.3	Gravity term	129
7.5	Results and discussion	130

7.5.1	Absolute pressure and density of the air pocket	131
7.5.2	Length of the emptying columns	131
7.5.3	Water and air flow of emptying columns	132
7.5.4	Risk of pipeline collapse	134
7.6	Conclusions	134
8	Discussion	137
8.1	Context and identification of the research problem	139
8.2	Procedural stage	140
8.2.1	Analytical stage	140
8.2.2	Experimental stage	153
9	Conclusions and recommendations	157
9.1	Main contributions	157
9.2	Conclusions	158
9.3	Future developments	161
	Appendix	
A	CFD model for predicting emptying processes of water	163
A.1	Implementation of a 2D CFD model	163
A.2	Comparison of the proposed model and a 2D CFD model	164
	Bibliography	167
