	Abstract	
	Resumen	
	Resum	
• Table of Content		21
	Figures	
	Tables	
	Abbreviations	
• Chapter 1. Introduction		33
1.	Abdomen and conventional open surgery	34
1.1.	Abdomen	
1.2.	Laparotomy	
2.	Laparoscopic surgery	36
2.1.	Procedure and instrumentation	
2.1.1.	Laparoscopic conventional hand-held instruments	
2.1.2.	The pistol grip handle and the instrument tips	
2.2.	Advantages of laparoscopy	
2.3.	Disadvantages of laparoscopy	
3.	Fatigue and musculoskeletal disorders associated to laparoscopic surgery	47
3.1.	Fatigue	
3.2.	Fatigue associated to laparoscopic surgery	
3.3.	Musculoskeletal disorders	
3.4.	Ergonomic and musculoskeletal disorders associated to laparoscopic surgery	
4.	The design of ergonomic laparoscopic hand-held instruments	54
4.1.	Requirements for an ergonomic laparoscopic handle	
4.2.	Solutions presented by other research teams	

•	Chapter 2. Justification and objectives	63
	5. Justification	64
	5.1.. Key points that justify this manuscript	
	5.2.. The concept of “Postural Freedom”	
	6. Objectives	65
	6.1. General objectives	
	6.2. Specific objectives	
•	Chapter 3. Electromyography evaluation	71
	7. Introduction. EMG in ergonomic studies	72
	7.1. Skeletal muscle anatomy	
	7.1.1. Micro anatomy	
	7.1.2. Macro anatomy. Muscles affected during laparoscopic procedures.	
	7.2. Muscle performance	
	7.2.1. Physiology	
	7.2.2. Electrical signal associated to the skeletal muscle	
	7.3. EMG recording techniques	
	7.3.1. Intramuscular EMG	
	7.3.2. Surface EMG	
	7.4. Surface EMG analysis	
	7.4.1. Analysis to measure the muscular effort. Amplitude parameter	
	7.4.2. Analysis to measure the muscular fatigue. Mean and median frequency parameter	
	7.5. Muscular fatigue index	
	7.5.1. Failure point approach	
	7.5.2. Spectral modifications approach	
	7.5.3. JASA approach	
	7.6. Other methods to detect muscular fatigue	
	7.7. Introduction to the experiments	
	7.8. Refining the experiment	

8.	Materials and methods	96
8.1.	Participants	
8.2.	Instruments	
8.3.	Protocol	
8.4.	Data acquisition	
8.5.	Data analysis	
9.	Results	101
10.	Discussion	108
•	Chapter 4. Motion capture analysis	113
11.	Introduction. Motion capture in ergonomic studies	114
11.1.	Critical movements in laparoscopic surgery	
11.1.1.	The VBST system	
11.1.1.1.	Marker-based	
11.1.1.2.	Depth-based	
11.1.1.3.	Contrast-based	
11.2.	Introduction to the experiment	
11.3.	Looking the appropriate MoCap system	
12.	Materials and methods	130
12.1.	Participants	
12.2.	Instruments	
12.3.	Protocol	
12.4.	Data acquisition	
12.5.	Data analysis	
13.	Results	135
14.	Discussion	139
•	Chapter 5. Design and prototype of a PF instrument for laparoscopic surgery. User-centered design	143
15.	Introduction. The user-centered design	144
15.1.	User-centered methodology	

16.	Creating the design solution. Evotool	146
16.1.	Design of a PF hand-held laparoscopic instrument	
16.2.	Prototyping	
16.3.	Evotool	
17.	Evaluating the solution with real users	154
17.1.	User-based evaluations	
17.2.	Test with expert users	
17.3.	Test Results	
17.4.	Discussion	
•	Chapter 6. Conclusions	163
•	Chapter 7. Bibliography	171
