

## TABLE OF CONTENTS

---

NOMENCLATURE	31
<b>INTRODUCTION</b>	<b>33</b>
<b>1. Properties of micro- and nano-reinforced biopolymers for food applications</b>	<b>35</b>
1.1. Bioplastics for food packaging	36
1.2. Micro- and nano-reinforcing agents	39
1.3. The effect of reinforcing agents on the functional properties of biopolymers	42
1.3.1. Processing method	42
1.3.2. The effect on tensile properties	45
1.3.3. The effect on barrier properties	48
1.3.4. The effect on thermal properties	51
1.4. The surface properties of micro- and nano-reinforced polymers for food applications	56
1.5. The effect of reinforcing agents on the material biodegradability	60
1.6. Finals remarks	65
<b>2. Lignocellulosic residues as a source of reinforcing agents and active compounds useful for food packaging applications</b>	<b>65</b>
2.1. Isolation of cellulosic reinforcing agents from lignocellulosic agro-waste	68
2.2. Isolation of active compounds from lignocellulosic agro-waste	73
2.3. Incorporation of cellulosic fillers and/or active extracts in biopolymer matrices for food packaging	76
References	81

<b>OBJECTIVES</b>	93
-------------------	----

---

<b>CHAPTERS</b>	97
-----------------	----

---

<b>PART 1. Incorporation of cellulosic fillers and active compounds from agro-wastes into starch matrices</b>	101
---	-----

---

<b>Chapter I. Isolation and characterisation of microcrystalline cellulose and cellulose nanocrystals from coffee husk and comparative study with rice husk</b>	101
---	-----

---

ABSTRACT	103
----------	-----

1. INTRODUCTION	104
-----------------	-----

2. MATERIALS AND METHODS	105
--------------------------	-----

2.1. Materials	105
----------------	-----

2.2. Extraction/purification process applied to rice and coffee husks	105
---	-----

2.2.1. Alkali treatment	106
-------------------------	-----

2.2.2. Bleaching treatment	106
----------------------------	-----

2.2.3. Acid hydrolysis	106
------------------------	-----

2.3. Structural characterization of fibres and cellulose nanocrystals (CNC)	106
---	-----

2.3.1. Thermal properties	106
---------------------------	-----

2.3.2. X-ray diffraction	107
--------------------------	-----

2.3.3. Optical microscopy	107
---------------------------	-----

2.3.4. Scanning electron microscopy (SEM)	107
---	-----

2.3.5. Morphological analysis in CNCs	107
---------------------------------------	-----

2.3.6. Chemical composition	108
-----------------------------	-----

2.3.7. Reinforcing capacity of the cellulose fibres and CNCs	108
--	-----

2.4. Statistical analysis	109
---------------------------	-----

3. RESULTS AND DISCUSSION	109
---------------------------	-----

3.1. Morphological changes and yield in alkali and bleaching treatments of	109
--	-----

rice and coffee husk	
3.2. Micro- and nano-structural analysis	112
3.3. Thermal analysis	118
3.4. Reinforcing capacity of the cellulose fibres and CNCs	120
4. CONCLUSIONS	122
REFERENCES .....	123

<b>Chapter II. Reinforcement of thermoplastics starch films with cellulose fibres obtained from rice and coffee husks</b>	<b>131</b>
---	------------

---

ABSTRACT	133
1. INTRODUCTION	134
2. MATERIALS AND METHODS	135
2.1. Materials	135
2.2. Extraction of cellulose fibres from coffee and rice husks	135
2.3. Preparation of TPS composite films	136
2.4. Characterization of fibres and composites	137
2.4.1. Optical properties	137
2.4.2. Microstructure analysis	137
2.4.3. Film Thickness and equilibrium moisture content	138
2.4.4. Water Vapour permeability and oxygen permeability	138
2.4.5. Tensile properties	138
2.4.6. Thermal analysis	139
2.5. Statistical analysis	139
3. RESULTS AND DISCUSSION	139
3.1. Microstructure and thermal behaviour of cellulose fibres	139
3.2. Properties of composite films	141
3.2.1. Optical properties	141
3.2.2. Tensile properties	142
3.2.3. Barrier properties	145

3.3. Microstructure of the composites	146
3.4. Thermal behaviour	149
4. CONCLUSIONS	152
REFERENCES .....	153

<b>Chapter III. Improving properties of thermoplastic starch films by incorporating active extracts and cellulose fibres isolated from rice or coffee husk</b>	157
--	-----

---

ABSTRACT	159
1. INTRODUCTION	160
2. MATERIALS AND METHODS	161
2.1. Materials	161
2.2. Extraction of active compounds	162
2.2.1. Measurement of antioxidant activity, EC <sub>50</sub> parameter, total phenolic content and antimicrobial activity	162
2.3. Extraction of cellulose fibres	163
2.4. Experimental design and film preparation	164
2.5. Film characterisation	165
2.5.1. Microstructural properties	165
2.5.2. Physico-chemical properties	165
2.5.3. Thermal analysis	166
2.5.4. Antioxidant activity	167
2.6. Statistical analysis	167
3. RESULTS AND DISCUSSION	167
3.1. Properties of coffee and rice husk extracts	167
3.2. Properties of starch-based films containing active extracts and cellulosic fibres	170
3.2.1. Microstructural analysis	170
3.2.2. Tensile properties	173

3.2.3. Barrier properties	175
3.2.4. Optical properties	176
3.2.5. Thermal behaviour	178
3.2.6. Antioxidant capacity	180
4. CONCLUSIONS	181
REFERENCES .....	183

**PART 2. Development of starch-PLA compatibilised matrices and addition of cellulosic materials and antioxidant extract from coffee agro-waste** 187

---

**Chapter IV. Using grafted poly( $\epsilon$ -caprolactone) for the compatibilization of starch-poly(lactic acid blends** 187

---

ABSTRACT	189
1. INTRODUCTION	190
2. MATERIALS AND METHODS	191
2.1. Materials	191
2.2. Chemical modification of PCL	192
2.3. Experimental design and film preparation	192
2.4. Film characterisation	193
2.4.1. Field emission scanning electron microscopy (FESEM)	193
2.4.2. X-Ray diffraction	193
2.4.3. Attenuated Total Reflectance-Fourier Transform Infrared (ATR-FTIR) spectroscopy	194
2.4.4. Thermal behaviour	194
2.4.5. Tensile properties	194
2.4.6. Oxygen permeability (OP), water vapour permeability (WVP) and moisture content	195
2.4.7. Optical properties	195

2.5. Statistical analysis	196
3. RESULTS AND DISCUSSION	196
3.1. Micro- and nano-structural properties	196
3.2. Thermal analysis	202
3.3. Mechanical properties	205
3.4. Moisture content and barrier properties	207
3.5. Optical properties	208
4. CONCLUSIONS	210
REFERENCES .....	212

<b>Chapter V. Using lignocellulosic fractions of coffee husk to improve properties of compatibilized starch-PLA blend films</b>	<b>217</b>
---	------------

---

ABSTRACT	219
1. INTRODUCTION	220
2. MATERIALS AND METHODS	222
2.1. Materials	222
2.2. Preparation of grafted PCL	222
2.3. Extraction of antioxidant compound and isolation of cellulosic materials from coffee husk	222
2.4. Obtaining compatibilised films	223
2.4.1. The incorporation of CNC	224
2.5. Characterisation of the films	225
2.5.1. Field emission scanning electron microscopy (FESEM) and X-Ray diffraction pattern	225
2.5.2. Thermal behaviour	225
2.5.3. Mechanical properties	225
2.5.4. Moisture content, water vapour permeability (WVP) and oxygen permeability (OP)	226
2.5.5. Optical properties	226

2.6. Antioxidant performance of the films on sunflower oil	227
2.7. Statistical analysis	227
3. RESULTS AND DISCUSSION	227
3.1. Effect of the CNC on the film functional properties as affected by the incorporation method	227
3.2. Effect of cellulosic fibres on the film's functional properties	236
3.3. Effect of antioxidant extract on the film's functional properties	237
4. CONCLUSIONS	239
