

CONTENTS

CHAPTER I: Introduction	1
CHAPTER II: Objectives	46
CHAPTER III: Material and methods	48
CHAPTER IV: Short and long-term experiments on the effect of sulphide on microalgae cultivation in tertiary sewage treatment	63
CHAPTER V: Outdoor flat-panel membrane photobioreactor to treat the effluent of an anaerobic membrane bioreactor. Influence of operating, design, and environmental conditions	87
CHAPTER VI: Optimising an outdoor membrane photobioreactor for tertiary sewage treatment	107
CHAPTER VII: Effect of light intensity, light duration and photoperiods in the performance of an outdoor photobioreactor for urban wastewater treatment	142
CHAPTER VIII: Effect of ambient temperature variations on an indigenous microalgae-nitrifying bacteria culture dominated by <i>Chlorella</i>	178
CHAPTER IX: Improving membrane photobioreactor performance by reducing light path: operating conditions and key performance indicators	207
CHAPTER X: On-line monitoring of microalgae activity based on carbon uptake rate data for membrane photobioreactors	241
CHAPTER XI: Production of microalgal external organic matter: influence of temperature and stress factors in a <i>Chlorella</i> -dominated culture	268
CHAPTER XII: Nitrite inhibition of microalgae induced by the competition between microalgae and nitrifying bacteria	295
CHAPTER XIII: Continuous 3-year outdoor operation of a flat-panel membrane photobioreactor to treat effluent from an anaerobic membrane bioreactor	321
CHAPTER XIV: General discussion	346
CHAPTER XV: Conclusions	354
APPENDIX: Abbreviations	360
