Abstract	vii
Resumen	ix
Resum.....	xi
Contents.....	xiii
Chapter I: Introduction	1
1 <i>Context and supporting institutions</i>	1
2 <i>Background</i>	2
3 <i>Objectives</i>	5
4 <i>Methodology</i>	6
5 <i>Structure of the Thesis</i>	7
<i>Bibliography</i>	14
Chapter II: A multi-objective model for inventory and planned production reassignment to committed orders with homogeneity requirements	19
1 <i>Introduction</i>	20
2 <i>Problem description</i>	21
3 <i>Literature review</i>	24
4 <i>Model</i>	27
4.1 <i>Nomenclature</i>	27
4.2 <i>HML-SP model</i>	28
4.3 Resolution methodology for the HML-SP Model	31
5 <i>Experimental design: application to a ceramic tile company</i>	32
5.1 Input data	32
5.2 Defining the hypotheses	34
5.3 Experimental results to prove the hypotheses	34
5.4 Computational efficiency	41
5.5 Managerial insights	44

6	<i>Conclusions and future research lines</i>	45
7	<i>Publication data</i>	45
	<i>Bibliography</i>	46
Chapter III: Simulation to reallocate supply to committed orders under shortage		51
1	<i>Introduction</i>	51
2	<i>Description of the problem</i>	55
3	<i>MP model formulation</i>	57
4	<i>SD model formulation</i>	59
5	<i>Applying the system dynamics model</i>	66
5.1	Validation	66
5.2	Simulating scenarios	70
5.3	Assessing the results.....	71
6	<i>Conclusions</i>	72
7	<i>Publication data</i>	74
	<i>Bibliography</i>	74
Chapter IV: Conceptual framework for designing agri-food supply chains under uncertainty by mathematical programming models		77
1	<i>Introduction</i>	78
2	<i>Conceptual framework for AFSC design models</i>	79
2.1	AFSC characteristics	81
2.2	Decision characteristics	83
2.3	Modelling approach.....	84
2.4	Uncertainty modelling	86
3	<i>Analysing AFSC design models</i>	87
3.1	AFSC characteristics	89
3.2	Decisions characteristics	93
3.3	Modelling approach.....	95
3.4	Uncertainty modelling	101
4	<i>Conclusions and future research lines</i>	103
5	<i>Publication data</i>	106
	<i>Bibliography</i>	106
Chapter V: Impact of perishability in the design of agri-food supply chains		113
1	<i>Introduction</i>	113
2	<i>Related literature analysis and contributions of this study</i>	114
3	<i>Problem description</i>	118
4	<i>MPM to design AFSC considering products' shelf-life</i>	119
4.1	Nomenclature	119
4.2	Agri-food supply chain design considering products' shelf-life model	121
4.3	Model extensions.....	124

5	<i>Computational experiments</i>	125
5.1	Data.....	125
5.2	Experimental design and results	127
5.3	Computational efficiency	130
6	<i>Conclusions and future research lines</i>	130
	<i>Bibliography</i>	131
Chapter VI: Centralized and distributed optimization models for the multi-farmer crop planning problem under uncertainty: application to a fresh tomato Argentinean supply chain case study		
1	<i>Introduction</i>	136
2	<i>Related literature analysis and contributions of this study</i>	139
3	<i>Problem description</i>	144
4	<i>Description of scenarios</i>	146
5	<i>MPMs for the cropping plan problem involving multiple farmers in different scenarios</i>	148
5.1	MPM for each farmer in distributed Scenario D	148
5.2	MPM for each farmer with limited land areas per variety in distributed Scenarios DAf, DAm and DAim.....	151
5.3	MPM for each farmer with shared information about market demands for the distributed Scenario DIS.	152
5.4	MPM for all farmers in centralized Scenario C.....	153
6	<i>Solution Methodology for the Fuzzy Models</i>	156
6.1	Formulation of the fuzzy mixed-integer linear programming models as equivalent α -parametric crisp models.....	157
6.2	Methodology for selecting the final solution for each scenario under uncertainty	159
7	<i>Computational experiments: Application to an Argentinean tomato supply chain</i>	161
7.1	Problem data description	161
7.2	Experimental design and results	164
8	<i>Conclusions and future research lines</i>	175
	<i>Bibliography</i>	176
	<i>Appendix A</i>	180
	<i>Appendix B</i>	183
Chapter VII: Conceptual framework for managing uncertainty in a collaborative agri-food supply chain context		
1	<i>Introduction</i>	187
2	<i>Crop-based AFSC sources of uncertainty</i>	188
3	<i>Impact of collaboration on crop-based AFSC</i>	191
4	<i>Conceptual framework for uncertainty management through collaboration in AFSCs</i>	192
5	<i>Conclusions</i>	194
6	<i>Publication data</i>	194

<i>Bibliography</i>	195
Chapter VIII: A collaborative model to improve farmers’ skill level by investments in an uncertain context	199
1 <i>Introduction</i>	199
2 <i>Problem description</i>	200
3 <i>Fuzzy model formulation</i>	200
4 <i>Solution method</i>	202
5 <i>Implementation and evaluation</i>	203
6 <i>Conclusions</i>	205
7 <i>Publication data</i>	206
<i>Bibliography</i>	206
Chapter IX: How to support group decision making in horticulture: An approach based on the combination of a centralized mathematical model and a Group Decision Support System	209
1 <i>Introduction</i>	210
2 <i>Related work</i>	211
2.1 Group Decision Support Systems for agriculture or horticulture.....	211
2.2 Collaborative planning for agriculture or horticulture	211
3 <i>Mathematical model for the tomato planning problem</i>	212
4 <i>GROUp Support (GRUS) description</i>	213
5 <i>Experiment</i>	215
5.1 Scenario/Context	215
5.2 Results of the centralized mathematical model	216
5.3 GRUS experiment using solutions generated by the centralized model	216
6 <i>Conclusion</i>	217
7 <i>Publication data</i>	218
<i>Bibliography</i>	218
<i>Appendix A</i>	221
Chapter X: Conclusions and future research lines	223
1 <i>Contributions of the Thesis</i>	223
1.1 Operative problems with heterogeneous products in the ceramic sector	224
1.2 Strategic problems with perishable products in the agri-food sector	227
1.3 Planning problems with perishable products in the agri-food sector	228
2 <i>Future research lines</i>	229
2.1 Operative problems with heterogeneous products in the ceramic sector	229
2.2 Strategic problems with perishable products in the agri-food sector	230
2.3 Planning problems with perishable products in the agri-food sector	230
2.4 Operations Research modelling and resolution tools	231
Appendix A: Journal authorizations	233
