Abstract v

Agradecimientos xi

Contents xiii

List of Symbols xvii

1 Introduction 1

1.1 Overview of modal analysis 1
1.2 Motivation and objectives 3
1.3 Thesis outline 4

2 The neutron transport equation 7

2.1 Concepts of reactor physics 8
2.2 The neutron transport equation 12
2.3 Spatial modes definition 16
2.4 The neutron diffusion equation 19
2.5 Spatial modes associated with the neutron diffusion equation 23
2.6 The Simplified Spherical harmonic equations (SP_N) 25

3 Finite element discretization 37

3.1 Fundamental concepts of finite element discretization 39
3.2 Spatial discretization for the modes problems associated with neutron diffusion equation 42
3.3 Spatial discretization for the SP_N equations 48
3.4 Numerical results 49

4 Eigenvalue computation methods 63

4.1 Eigenvalue problem solvers 65
4.2 Initialization techniques 88
4.3 Preconditioned strategies for linear systems 93
4.4 Matrix-free implementation 103
4.5 Numerical results to compute the λ-modes associated with the SP_N equations . 110

5 Modal methods for the time dependent neutron diffusion equation 123

5.1 Finite element discretization 126
5.2 Backward differential method 127
5.3 Modal method 128
5.4 Numerical results for the modal method. 133
5.5 Updated modal method. 148
5.6 Numerical results for the updated modal method. 153
5.7 Adaptive modal method 158
5.8 Numerical results for the adaptive updated modal method 161

6 Conclusions 167

6.1 Future work 171

Bibliography 173

A Analytical Solutions for 3D Homogeneous Reactors 189

A.1 Analytical solution for λ-modes problem 189
A.2 Analytical solution for γ-modes problem 191
A.3 Analytical solution for α-modes problem 192

B Benchmarks Definitions 195

B.1 3D Homogeneous reactor 195
B.2 3D Cuboid reactor (Benchmark E) 196
B.3 Langenbuch benchmark 198

B.4 NEACRP benchmark 201
B.5 C5G7 benchmark. 203
