

**KTH Industrial Engineering
and Management**

Study of high flash point ethyl alcohol based secondary fluids applied in Ground Source Heat Pumps systems

Luis Enrique Carrion Domenech

Master of Science Thesis

KTH School of Industrial Engineering and Management

Energy Technology EGI-2018-2019

Division of Applied Thermodynamics and Refrigeration

SE-100 44 STOCKHOLM

Table of Contents

1	Abstract.....	2
2	Introduction.....	12
2.1	Refrigerant.....	12
2.1.1	Climate change.....	12
2.1.2	Classification of refrigerants.....	16
2.2	Refrigeration sector.....	17
2.2.1	Energy use in the refrigeration sector.....	17
2.2.2	Environmental impact of the refrigeration sector.....	18
2.3	Refrigeration system.....	20
2.4	Ground source heat pumps systems (GSHP).....	22
2.4.1	Market applications.....	22
2.4.2	New development: Dual source HP.....	26
2.4.3	Natural and Low GWP refrigerants for GSHP.....	26
2.5	Objective.....	27
3	Ground source heat pumps in Sweden and Spain.....	28
3.1.1	Sweden.....	28
3.1.2	Spain.....	28
3.1.3	Differences.....	29
4	Secondary fluids.....	34
4.1	Main properties.....	34
4.2	Secondary fluids for indirect refrigeration system.....	35
4.3	High flame point additives.....	36
5	Methodology.....	37
5.1	Limitations.....	38
5.2	Freezing point temperature.....	39
5.3	Density.....	40
5.4	Viscosity.....	43
5.5	Thermal conductivity.....	44
5.6	Specific heat capacity.....	46
5.7	Error analysis.....	48
5.7.1	Density error analysis.....	49
5.7.2	Dynamic viscosity error analysis.....	49
5.7.3	Thermal conductivity error analysis.....	50
5.7.4	Specific heat capacity error analysis.....	51
5.8	Excel model of Ground Source Heat Pump.....	52
6	Results.....	53

6.1	Additive Stability Test	54
6.2	Freezing point temperature	56
6.3	Density.....	57
6.3.1	Density results for solutions with freezing point of -10 °C	57
6.3.2	Density for solutions with freezing point of -15 °C.....	58
6.3.3	Density results for solutions with freezing point -20 °C.....	60
6.4	Viscosity.....	60
6.4.1	Viscosity results for solutions with freezing point of -10 °C.....	61
6.4.2	Viscosity results for solutions with freezing point -15 °C.....	62
6.4.3	Viscosity results for solutions with freezing point -20 °C.....	62
6.5	Thermal conductivity.....	63
6.5.1	Thermal conductivity results for solutions with freezing point -10 °C.....	64
6.5.2	Thermal conductivity results for solutions with freezing point -15 °C.....	65
6.5.3	Thermal conductivity results for solutions with freezing point -20 °C.....	65
6.6	Specific heat capacity.....	66
6.6.1	Specific heat capacity results for solutions with freezing point -10°C	66
6.6.2	Specific heat capacity results for solutions with freezing point -15°C	67
6.6.3	Specific heat capacity results for solutions with freezing point -20°C	68
6.7	Performance.....	69
6.7.1	Reynolds number results for solutions with the freezing point of -10 °C.....	70
6.7.2	Heat transfer coefficient results for solutions with the freezing point of -10°C.....	71
6.7.3	Pumping power performance results for solutions with the freezing point of -10 °C.....	73
6.7.4	Reynolds number results for solutions with the freezing point of -15 °C.....	75
6.7.5	Heat transfer coefficient results for solutions with the freezing point of -15°C.....	78
6.7.6	Pumping power performance results for solutions with the freezing point of -15 °C.....	80
6.7.7	Reynolds number results for solutions with the freezing point of -20 °C.....	81
6.7.8	Heat transfer coefficient results for solutions with the freezing point of -20°C.....	83
6.7.9	Pumping power performance results for solutions with the freezing point of -20 °C.....	85
7	Conclusion and Future work.....	87
7.1	Conclusions.....	87
7.2	Future Work.....	88
	Bibliography	89
