

TABLE OF CONTENTS

CHAPTER 1: GENERAL INTRODUCTION	3
1. Intensification of aquaculture and environmental impact	5
2. Recirculating aquaculture systems	8
3. Water purification systems in recirculating aquaculture systems	10
4. Ammonia generation and toxicity	13
5. Ammonia removal	18
JUSTIFICATION AND OBJECTIVES	28
CHAPTER 2: MATERIAL AND METHODS	34
1. Facilities	36
2. Analytical protocols and equipment	40
CHAPTER 3: INFLUENCE OF FILTER MEDIUM TYPE, TEMPERATURE AND AMMONIA PRODUCTION IN NITRIFYING TRICKLING FILTERS PERFORMANCE	43
1. Introduction	45
2. Material and methods	49
2.1. Tanks and biofilters	49
2.2. Measurements	50
2.2.1. Trickling filter development	50
2.2.2. Trial measurements	51
2.3. Equipment and chemical products	52
2.4. Data processing	53
2.5. Statistics	54
3. Results	54
3.1. pH and oxygen	54
3.2. N-TAN daily variation	54
3.3. Influence of individual process parameters	61
3.3.1. Influence of the filter media type on the N-TAN removal rate	61
3.3.2. Influence of the temperature on the N-TAN removal rate	61
3.3.3. Influence of the TAN load on the N-TAN removal rate	62
3.4. Influence of combination of process parameters	62
4. Discussion	65

CHAPTER 4: INFLUENCE OF TEMPERATURE, AMMONIA LOAD AND HYDRAULIC LOADING ON THE PERFORMANCE OF NITRIFYING TRICKLING FILTERS FOR RECIRCULATING AQUACULTURE SYSTEMS	70
1. Introduction	72
2. Materials and methods	74
2.1. Experimental design	74
2.2. Performance measurements	76
2.3. Analytical protocols	76
2.4. Statistics	77
3. Results	78
3.1. N-TAN, nitrite and nitrate hourly variation	78
3.2. Alkalinity	82
3.3. Influence of process parameters on N-TAN removal rate	82
3.4. Influence of the combination of process parameters on N-TAN removal rates, maximum and minimum N-TAN concentrations	85
4. Discussion	86
CHAPTER 5: INFLUENCE OF DIET AND FEEDING STRATEGY ON OXYGEN CONSUMPTION AND AMMONIA EXCRETION OF GILTHEAD SEA BREAM (<i>SPARUS AURATA</i>) RAISED IN RECIRCULATING AQUACULTURE SYSTEMS AND ASSOCIATED NITRIFYING TRICKLING FILTER PERFORMANCE	92
1. Introduction	94
2. Material and methods	96
2.1. Experimental system design	96
2.1. Fish	97
2.2. Fish diets and feeding strategies	98
2.3. Digestibility experiment	100
2.4. Nitrogen retention calculations	101
2.5. Ammonia excretion and oxygen consumption trails	101
2.6. Biofilter performance measurements	102
2.7. Analytical procedures	103
2.7.1. Water quality parameters measurements	103
2.7.2. Fish and diets proximate composition	104
2.7.3. Digestibility	104
2.8. Data processing and statistics	104

3.	Results	105
3.1.	Growth, survival and proximate composition	105
3.2.	Oxygen consumption	106
3.3.	Ammonia excretion	110
3.4.	Nitrogen balance	113
3.5.	Biofilter performance	114
4.	Discussion	118
	GENERAL DISCUSSION	125
1.	Influence of process parameters on the nitrification rate	127
2.	Influence of organic matter in the effects of process parameters on nitrifying filter performance	131
3.	Considerations about the relationship between fish nutrition and nitrifying filter performance	132
4.	N-TAN concentration patterns: discussion about the performance measurements	135
5.	Possible future contributions of maximization of trickling filter performance	136
	CONCLUSIONS	138
	REFERENCES	143
