Contents	i
List of Figures	v
List of Tables	xii
1 Introduction	1
1.1 Background and Motivation	1
1.2 Research questions and Objectives	5
1.3 Thesis outline	6
References	7
2 Premixed combustion in spark ignition engine: fundamentals and developments	11
2.1 Introduction	11
2.2 Lean and diluted combustion in spark ignition engines	11
2.2.1 Thermal efficiency	13
2.2.2 Lean flammability limits and ignition limits	15
2.2.3 Laminar flame speed	16
2.2.4 Flame quenching	18
2.2.5 Emissions	20
2.2.6 Cycle-to-cycle dispersion	23
2.2.7 Summary and development trends	24
2.3 History of the pre-chamber ignition systems	26
2.3.1 First pre-chamber system generation: Flame ignition	27
2.3.2 Second pre-chamber system generation: Torch jet ignition	31
2.3.3 Modern pre-chamber spark ignition system: Turbulent jet ignition	34

2.4	The latest generation of pre-chamber spark ignition system . . .	35
2.4.1	Lean flammability limits and combustion stability . . .	35
2.4.2	Combustion speed	37
2.4.3	Emissions	40
2.4.4	Modelling	42
2.4.5	Outstanding challenges	44
	References	46
3	Experimental setup and methodology	55
3.1	Introduction	55
3.2	Combustion system	55
3.2.1	Rapid Compression-Expansion Machine (RCEM)	56
3.2.2	Pre-chamber geometries	58
3.2.3	Fuel injection and ignition systems	61
3.3	Optical setup and technique for flame visualization	64
3.3.1	Image post-processing	66
3.4	Matrix test	66
3.5	Test methodology	70
	References	71
4	Zero-dimensional turbulence model	75
4.1	Introduction	75
4.2	3D-CFD in motoring conditions	76
4.3	0D turbulence model	82
4.4	Model constants adjustment and sensitivity analysis	89
4.4.1	Baseline case: pre-chamber PC01	90
4.4.2	PC02 case: swirling flow constant adjustment	93
4.4.3	PC03 and PC04 cases: orifices shape and number effects	94
4.4.4	PC04 case: coefficients readjustment	98
	References	98
5	Combustion analysis on baseline design	103
5.1	Introduction	103
5.2	Thermodynamic model under combustion mode	103
5.2.1	Chemical model	105
5.2.2	Combustion model	106
5.2.3	Pre-chamber flame propagation model	112
5.3	PC01 - Baseline case analysis	114
5.3.1	Cycle-to-cycle dispersion	114
5.3.2	Auxiliary injection point	115

5.3.3	Spark ignition point	118
5.3.4	Pressure evolution description and test phases characterization	120
5.3.5	Nozzle velocity, turbulence and heat release rate prediction	122
5.3.6	Flame speed: model results and validation	126
5.3.7	Flame quenching distance	129
5.4	PC01 - Equivalence ratio influence	130
	References	136
6	Pre-chamber spark ignition system: Geometry effects	141
6.1	Introduction	141
6.2	Straight nozzle PC01 vs tilted nozzle PC02	142
6.2.1	Main chamber lean case: $\phi_{MC} = 0.5$	142
6.2.2	Main chamber ultra-lean case $\phi_{MC} = 0.3$	147
6.2.3	Summary	150
6.3	Eight orifices tilted nozzle vs six tilted orifices nozzle: PC03 and PC02	151
6.3.1	Main chamber lean case: $\phi_{MC} = 0.5$	151
6.3.2	Main chamber lean case: $\phi_{MC} = 0.3$	155
6.3.3	Summary	159
6.4	Four orifices tilted nozzle vs six tilted orifices nozzle: PC04 and PC02	160
6.4.1	Main chamber lean case: $\phi_{MC} = 0.5$	160
6.4.2	Main chamber ultra-lean case: $\phi_{MC} = 0.3$	164
6.4.3	Summary	167
6.5	Turbulent flame speed: all pre-chambers	168
6.6	Ultra-lean combustion improvement: PC05 axial nozzle	171
7	Summary and future works	177
7.1	Summary	177
7.2	Future directions	184
7.2.1	Numerical	184
7.2.2	Experimental	184
	Global Bibliography	187
