Abstract	iii
Resumen	v
Resum	vii
Contents	ix
1 Introduction	1
1.1 Notation	6
2 Basics of Lipschitz and Lipschitz-free spaces	9
2.1 Lipschitz functions and Lipschitz spaces	9
2.2 Lipschitz-free spaces	16
2.3 Distinguished elements and examples	21
3 Supports in Lipschitz-free spaces and their biduals	29
3.1 Weighting operators	30
3.2 Normal functionals	34
3.3 Supports in $\mathcal{F}(M)$	39
3.4 The uniform compactification	49
3.5 Supports in $\mathcal{F}(M)^{**}$	53
3.6 Open problems	67

4	Integral representation	71
4.1	Radon measures	72
4.2	Functionals induced by measures	74
4.3	Majorizable functionals	87
4.4	Radially discrete spaces	98
4.5	Open problems	101
5	Extremal structure of the unit ball	103
5.1	Extreme points and metric alignment	103
5.2	Extreme and preserved extreme molecules	108
5.3	Other extremal elements	119
5.4	Open problems	125
	Bibliography	129
	List of symbols	133
	Index of terms	135
