Abstract	iii
Acknowledgements	iii
Contents	xi
List of Figures	xiii
List of Tables	xvii
1 Introduction	1
2 Optimization methodology of Borehole Heat Exchangers	9
2.1 Introduction	10
2.2 Background.	11
2.3 Methodology	12
2.4 Conclusions.	13
3 Assessing of Shallow Geothermal Laboratory	15
3.1 Introduction	16
3.2 Material and methods.	17
3.3 Results.	26
3.4 Discussion.	30
3.5 Conclusions.	32

4 Numerical simulations to improve performance and cost-efficiency of BHEs	35
4.1 Introduction	36
4.2 State of the art	36
4.3 Parameter sensitivity analysis implementation	43
4.4 Material development	63
4.5 Conclusions.	68
5 Theoretical and experimental optimization of Borehole Heat Exchangers (BHEs)	71
5.1 Thermal performance assessment of single-U tube borehole according to working fluid flow rate	72
5.2 Thermal borehole performance assessment of coaxial borehole according to working fluid flow rate	99
6 Discussion	107
6.1 Geothermal laboratory and thermal test assessment.	108
6.2 Development of advanced materials guided by numerical simulations	112
6.3 Effect of working fluid flow rate on the borehole thermal efficiency and pressure losses.	113
7 Conclusions	117
7.1 Future work	119
Appendices	121
A Case 1: Flow 0.033 l/s	123
B Case 2: Flow 0.044 l/s	124
C Case 3: Flow 0.064 l/s	126
D Case 4: Flow 0.083 l/s	127
E Case 5: Flow 0.1 l/s	129
F Case 6: Flow 0.15 l/s	130
G Case 7: Flow 0.2 l/s	132
H Case 8: Flow 0.25 l/s	133
Nomenclature	135
Bibliography	139
