

# Table of Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Introduction	1
1.2	Background and motivation	2
1.2.1	Emission regulations for light-duty vehicles	3
1.2.2	Main R&D technology paths of modern powertrains for light-duty applications	5
1.3	Focus of the research work of this thesis	8
1.4	Objectives and organization of the research	12
	Bibliography	15
<b>2</b>	<b>Literature review</b>	<b>17</b>
2.1	Introduction	17
2.2	Fundamentals of the LTC concepts in CI engines	18
2.2.1	Description of the fundamental principles of the Homogeneous Charge Compression Ignition (HCCI) concept	20
2.2.2	Description of the fundamental principles of the gasoline Partially Premixed Combustion (PPC) concept	27
2.3	Two-Stroke engine architectures and scavenging processes	33
2.3.1	Brief history of the 2-Stroke cycle	35
2.3.2	New interests for the 2-Stroke cycle and most promising engine architectures	36
2.4	Summary and concluding remarks	39
	Bibliography	41

<b>3</b>	<b>Experimental and theoretical tools</b>	<b>49</b>
3.1	Introduction	50
3.2	2-Stroke single-cylinder research engines	51
3.2.1	Main engine geometric characteristics	52
3.2.2	Scavenge architecture and valvetrain system	52
3.2.3	Fuel injection system	56
3.2.4	Fuel specifications	58
3.2.5	Test cell characteristics and equipment	59
3.2.5.1	Equipment and acquisition systems specific to the Uniflow engine	61
3.2.5.1.a	Air-loop systems for the Uniflow engine (intake, exhaust, EGR routes and equipments)	61
3.2.5.1.b	Data acquisition system	63
3.2.5.2	On-bench fast post-processing code	64
3.3	Theoretical tools	65
3.3.1	1D models	66
3.3.2	IGR estimation model	67
3.3.2.1	Methodology	68
3.3.2.2	Model description	70
3.3.2.2.a	Definition of the geometric and measured parameters	71
3.3.2.2.b	Basic thermodynamic model	72
3.3.2.2.c	Detailed thermodynamic model	73
3.3.2.3	Model validation	77
3.3.2.3.a	Set up of the DoEs	78
3.3.2.3.b	Results from the DoEs and comparison between the <i>OpenWAM</i> model and the estimators	79
3.3.2.3.c	Adjustments of the polytropic coefficients	79
3.3.3	Multi-dimensional air-flow and combustion modeling	83

---

3.3.3.1	Set-up of the model for the Uniflow engine ..	84
3.3.3.2	Initialization, regions and boundary conditions	85
3.4	Conclusions .....	86
	Bibliography .....	87
A	Appendices .....	91
A.1	Tracer method for Trapping Ratio calculation .....	91
A.2	Calculation of the burnt gas mass fraction at EVO ...	92
A.3	DoEs definition .....	93
A.4	DoEs detailed results .....	95
<b>4</b>	<b>Investigation of the gasoline PPC concept in a 2-Stroke poppet-valve HSDI CI engine</b>	<b>97</b>
4.1	Introduction .....	98
4.2	Experimental equipment and methodology .....	99
4.3	Analysis of the gasoline PPC concept .....	101
4.3.1	Effect of 1 <sup>st</sup> injection timing .....	102
4.3.2	Effect of 2 <sup>nd</sup> injection timing .....	103
4.3.3	Effect of 3 <sup>rd</sup> injection timing .....	106
4.3.4	Effect of injection pressure .....	109
4.3.5	Effect of fuel distribution .....	112
4.3.6	Conclusions .....	115
4.4	Optimization of the gasoline PPC concept .....	117
4.4.1	Optimization of the RoHR profile to control the noise level .....	118
4.4.2	Strategy for improving noise/emissions/efficiency trade-offs .....	122
4.4.3	Strategy for improving the corrected efficiency .....	127
4.4.4	Mapping of the engine at lower load conditions and comparison with a CDC operated 4-Stroke engine ....	129
4.5	Conclusions .....	133
	Bibliography .....	135

---

<b>5</b>	<b>Theoretical design and experimental validation of a 2-Stroke Uniflow HSDI CI engine</b>	<b>137</b>
5.1	Introduction .....	138
5.2	Engine dimensioning .....	139
5.2.1	Design methodology and theoretical tools .....	139
5.2.2	Architecture definition .....	140
5.3	Intake port study .....	143
5.3.1	Simple ports: parametric investigations .....	143
5.3.2	Complex ports: different geometry propositions and CFD optimization .....	148
5.4	Experimental validation and optimization .....	156
5.4.1	Testing methodology .....	156
5.4.2	Scavenging performance: results and discussions .....	157
5.4.2.1	Validation of the 16 mm twisted ports .....	157
5.4.2.2	Design and testing of the 16 mm two stages ports .....	159
5.4.2.3	Evaluation of the performance of 10 mm height ports .....	160
5.4.3	Benchmark of engine technologies .....	162
5.5	Conclusion .....	163
	Bibliography .....	164
<b>6</b>	<b>Conclusions and future works</b>	<b>167</b>
6.1	Introduction .....	167
6.2	Summary and main conclusions of the thesis .....	168
6.3	Future works and further investigation paths .....	173
	<b>Bibliography</b>	<b>177</b>
