Acknowledgements .....	5
Abstract .....	7
Resumen.....	9
Resum.....	11
Contents.....	13
Figures List.....	17
Tables List .....	21
Acronyms .....	23
Structure of this thesis .....	25
Chapter 1. Introduction .....	27
1.1 Motivation.....	29
1.2 Objectives .....	30
Chapter 2. State of the Art.....	33
2.1 The heart .....	35
2.2 The cardiac tissue.....	37
2.2.1 Ion channels.....	39
2.2.2 The action potential .....	43
2.2.3 The electrocardiogram.....	47
2.3 Cardiac Disease.....	49
2.3.1 Cardiac structural disease .....	49
2.3.2 Long QT syndrome (LQTS) .....	49
2.4 Arrhythmia and Torsade-de-pointes .....	50
2.5 Antiarrhythmic therapy.....	52
2.5.1 Class I: sodium channel blockers. ....	52
2.5.2 Class II: $\beta$ -blockers.....	52
2.5.3 Class III: action potential prolongers.....	53
2.5.4 Class IV: calcium channel blockers.....	53
2.6 Modeling the cardiac electrophysiology .....	53
2.6.1 An introduction to cardiac modeling .....	53

---

2.6.2	Ion channel models.....	55
2.6.3	Cardiomyocyte action potential models .....	63
2.6.4	Tissue models .....	64
2.6.5	Channel-drug interaction models.....	66
Chapter 3.	Development of an in-silico TdP biomarker for early proarrhythmicity detection .....	71
3.1	Introduction.....	73
3.1.1	Objectives .....	75
3.2	Materials and methods .....	75
3.2.1	Models .....	75
3.2.2	Drug dataset.....	78
3.2.3	Simulation Protocols.....	80
3.2.4	Torsadogenic risk classification with Tx .....	81
3.3	Results.....	82
3.3.1	APD and QT .....	82
3.3.2	Proarrhythmicity assessment .....	91
3.4	Discussion.....	103
3.4.1	Findings .....	103
3.4.2	Limitations.....	105
3.4.3	Implementation.....	107
3.5	Conclusions.....	108
3.6	References of the drug dataset .....	109
Chapter 4.	Study and Modeling of a Channelopathy and Testing of Specific Treatments.....	115
4.1	Introduction.....	117
4.1.1	Long-QT syndrome and SCN5A V411M mutation.....	117
4.1.2	The late component of the sodium current ( $I_{NaL}$ ).....	120
4.1.3	LQTS type 3 therapy .....	123
4.1.4	Objectives .....	125
4.2	Materials and Methods.....	126
4.2.1	Clinical characterization .....	126

4.2.2	Models .....	126
4.2.3	Optimization of the $I_{Na}$ models .....	129
4.3	Results.....	132
4.3.1	QTc intervals of the patients.....	132
4.3.2	Overview of the optimization program.....	133
4.3.3	Wild type $I_{Na}$ model.....	135
4.3.4	Mutation model .....	137
4.3.5	Flecainide model.....	139
4.3.6	Ranolazine model .....	143
4.3.7	Differences in flecainide and ranolazine mechanisms of action.....	143
4.4	Discussion.....	159
4.4.1	Main outcomes .....	159
4.4.2	Ranolazine, flecainide and LQT3 .....	159
4.4.3	Personalized medicine .....	162
4.4.4	Implementation.....	164
4.4.5	Limitations.....	165
4.5	Conclusions.....	168
Chapter 5.	General Conclusions.....	169
Chapter 6.	Future work .....	174
Chapter 7.	Contributions .....	177
7.1	Journal Papers .....	179
7.1.1	Main contributions.....	179
7.1.2	Related contributions.....	179
7.2	Conference papers and communications.....	179
7.2.1	Main contributions.....	179
7.2.2	Related contributions.....	180
7.3	Research projects .....	180
7.4	Cardiac Safety prediction tool.....	181
Appendix.	Optimization procedure .....	183
A. 1.	General considerations.....	185

A. 2. Patch clamp protocols .....	186
A. 3. Optimization of the wild-type (WT) $I_{Na}$ .....	187
A. 4. Optimization of the SCN5A V411M mutation .....	192
A. 5. Optimization of Flecainide .....	193
A. 6. Optimization of Ranolazine .....	197
References .....	200
