Declaration	i
Acknowledgments	iii
Summary	vii
Resum	ix
Resumen	xi
Glossary	xiii

Chapter 1. State of the Art, Motivation and Aim

1.1	Polymer production and waste management in packaging	3
1.2	Biodegradable polymers. Polylactide	8
1.2.1	Definitions	8
1.2.2	Classification of biodegradable polymers	10
1.2.3	Structure and main features of polylactide	11
1.2.4	Barrier properties of polylactide	14
1.2.5	Thermal properties of polylactide	14
1.2.6	Mechanical properties of polylactide	16
1.3	Motivation and Aim of the PhD Thesis	17
1.4	Bibliographical References	21

Chapter 2. Introduction

2.1	Background in polymer degradation	31
2.1.1	Classification of polymer degradation	32
2.1.2	Polymer characteristics affecting the degradation processes	37

2.2	Degradation mechanisms of polylactide	39
2.2.1	Thermal degradation of polylactide	39
2.2.2	Biodegradation of polylactide	42
2.2.3	Photodegradation of polylactide	47
2.3	Importance of the crystallization in the degradation processes	50
2.3.1	Crystallinity in polymers	50
2.3.2	The thermodynamics of the crystallization	53
2.3.3	Crystallization kinetics	57
2.4	Bibliographical references	61

Chapter 3: Experimental Part

3.1	Material	71
3.2	Degradation tests	72
3.2.1	Thermal degradation test	73
3.2.2	Biodegradation test	72
3.2.3	Photodegradation test	73
3.3	Characterization techniques	74
3.3.1	Viscometry	74
3.3.2	Gel Permeation Chromatography (GPC)	78
3.3.3	Fourier Transform Infrared Spectroscopy (FTIR)	80
3.3.4	Thermogravimetric analysis (TGA))	83
3.3.5	Scanning Electron Microscopy (SEM)	96
3.3.6	Dynamic Mechanical Thermal Analysis (DMTA)	97
3.3.7	Differential Scanning Calorimetry (DSC)	105
3.3.8	Optical Microscopy (OM)	106
3.4	Bibliographical references	109

Chapter 4: Results and discussion

4.1	Molar mass assessment	115
4.1.1	Molar mass results	115
4.1.2	Functionalizing the molar mass with time	122
4.1.3	Literature data of molar mass decay due to degradation	130
4.2	Analysis of the chemical structure	137
4.2.1	Thermal degradation	143
4.2.2.	Biodegradation	145
4.2.3	Photodegradation	148
4.3	Thermal stability study	151
4.3.1	Study of the temperature variation	151
4.3.2	Kinetic analysis	161
4.4	Surface observation	191
4.5	Evaluation of the viscoelastic behavior	202
4.5.1	Dynamic mechanical relaxation spectra	202
4.5.2	Modeling the relaxation spectra	207
4.6	Analysis of thermal transitions	217
4.6.1	DSC thermograms for the thermally, bio and photo degraded samples.	217
4.6.2	Double melting behavior	222
4.6.3	Thermal parameters	227
4.7	Kinetics of the crystallization from the melt	243
4.7.1	Spherulitic Morphology	243
4.7.2	Crystallization Kinetics	247
4.7.2	Analysis of temperature coefficient of the growth rate	258
4.8	Bibliographical references	268

Chapter 5: Conclusions

5.1	Conclusions	279
5.2	Future research	287

Annex: Publications during the research period **289**

- 1 Hygrothermal ageing of reprocessed polylactide
- 2 Reprocessed polylactide: Studies of thermo-oxidative decomposition
- 3 A methodology to assess the energetic valorization of bio-based polymers from the packaging industry: Pyrolysis of reprocessed polylactide
- 4 Thermal analysis applied to the characterization of degradation in soil of polylactide: I. Calorimetric and viscoelastic analyses
- 5 Thermal analysis applied to the characterization of degradation in soil of polylactide: II. On the thermal stability and thermal decomposition kinetics
- 6 A thermogravimetric approach to study the influence of a biodegradation in soil test to a poly(lactic acid)
- 7 Thermal characterisation of photo-oxidized HDPE/Mater-BI and LDPE/Mater-BI blends buried in soil
- 8 Thermal characterization of polyethylene blends with a biodegradable masterbatch subjected to thermo-oxidative treatment and subsequent soil burial test
