1	Introduction	1
1.1	Slow and fast light propagation	2
1.1.1	SFL physical principles	2
1.1.2	SFL device platforms	3
1.2	Tunable phase shifts and true time delays for MWP applications	4
1.3	Thesis objectives	8
1.4	Structure of the thesis	9
2	SFL effects using stimulated Brillouin scattering for MWP applications	11
2.1	Introduction	11
2.2	Principle of operation	13
2.3	Phase shifter based on double SBS generation	14
2.4	True time delay line based on SBS and separate carrier tuning	18
2.5	MWP filter using SBS effects	23
2.6	Dynamic Brillouin gratings	27
2.7	Basic MWP functionalities using DBGs	29
2.8	MWP filter implementations based on DBG reflections	33
2.8.1	MWP filter based on an hybrid configuration: DBG + delay line (1 st configuration)	35
2.8.2	MWP filter based on multiple DBGs (2 nd configuration)	36
2.8.3	MWP filter for high-frequency applications based on multiple spectrally detuned DBGs (3 rd configuration)	37
2.8.4	MWP filter based on DBGs generated by a pseudo-random sequence (4 th configuration)	40
2.9	Conclusions	41

3	Long fiber Bragg gratings: spectral analysis and applications	43
3.1	Introduction	43
3.2	Principle of operation	44
3.3	Distributed sensing system	46
3.4	Tunable delay line	50
3.5	MWP basic functionalities	51
3.6	All-optical temporal integrator	53
3.7	Conclusions	55
4	SFL effects in semiconductor optical amplifiers for MWP applications	57
4.1	Introduction	57
4.2	Principle of operation	58
4.2.1	Coherent population oscillations in SOAs	58
4.2.2	Enhancing the phase shifter performance by filtering	59
4.2.3	360° by cascading several SOA-based phase shifter stages	61
4.3	Propagation model for the SOA-based phase shifter	62
4.4	Nonlinear distortion analysis in SOA-based phase shifters	67
4.4.1	Nonlinear distortion influence on the filtering scheme	68
4.4.2	Nonlinear distortion evaluation for cascading phase shifter stages	76
4.5	Figures of merit for cascaded SOA-based phase shifter structures	84
4.5.1	RF net gain evaluation	85
4.5.2	Noise figure evaluation	87
4.5.3	Spurious free dynamic range evaluation	90
4.6	Fully tunable MWP phase shifter based on a single SOA	94
4.6.1	Principle of operation	95
4.6.2	Computed results	97
4.6.3	Experimental results	99
4.6.4	FOMs evaluation	102
4.7	Fully tunable MWP filter using the single SOA based phase shifter implementation	105
4.8	True time delay line based on cross gain modulation in SOAs	107
4.9	Conclusions	109

5	SFL effects in photonic crystals for MWP applications	113
5.1	Introduction	113
5.2	Principle and fabrication	114
5.3	True time delay characterization	116
5.4	MWP filter	118
5.5	Figures of merit for PhC-based delay lines	121
5.5.1	Numerical fitting	121
5.5.2	FOM: Modulation scheme	122
5.5.3	FOM: Non-uniform delay tunability	123
5.5.4	FOM: Tunability resolution	125
5.5.5	FOM: Loss per unit delay	126
5.5.6	FOM: Power uniformity per unit bandwidth	126
5.5.7	FOM: Size	127
5.5.8	FOM: Power consumption	127
5.6	Conclusions	127
6	Conclusions and future perspectives	129
6.1	Summary and general conclusions	129
6.2	Directions for future research	133
