
Table of Contents

1. Introduction to Functional Hybrid Catalysts	1
1.1. <i>Hybrid organic-inorganic catalysts</i>	5
1.2. <i>Metal-Organic Frameworks (MOFs)</i>	7
1.3. <i>Mesoporous silica-based hybrid materials</i>	10
1.3.1. Post-synthetic modification (Grafting)	11
1.3.2. Co-condensation method (“one-pot”)	12
1.3.3. Periodic Mesoporous Organosilicas (PMOs)	14
1.4. <i>Sol-gel chemistry and hybrid materials</i>	17
1.4.1. Hydrolysis and condensation of silicon alkoxides	18
1.4.2. Fluoride catalyzed hydrolysis and condensation	20
1.4.3. Surfactant mediated sol-gel synthesis	22
1.4.4. Handling silyl-derivatives	23
1.5. <i>Silica-based hybrids in heterogeneous catalysis</i>	25
1.5.1. Acid catalysts	25
1.5.2. Base catalyst	27
1.5.3. Organometallic complexes	30
1.6. <i>Silica-based multi-functional hybrid catalysts</i>	35
1.7. <i>References</i>	41
2. General Objectives	49
3. Organosiliceous Hybrid Materials Functionalized with Aryl-Sulfonic Acid Groups	55
3.1. <i>Sulfonic acid groups in heterogeneous catalysis</i>	57
3.1.1. Sulfonic acids supported onto mesoporous carbons	58
3.1.2. Sulfonated mesoporous polymers	60
3.1.3. Sulfonic acids supported onto silica-based materials	61
3.2. <i>Scope of this work</i>	68
3.3. <i>Experimental</i>	70
3.3.1. Synthesis of the materials	70
3.3.2. Catalytic test	71
3.3.3. Characterization	72

3.4.	<i>Results and discussion</i>	74
3.4.1.	Synthesis of the hybrid catalysts	74
3.4.2.	Characterization	76
3.4.3.	Adsorption of probe molecules followed by spectroscopies (FTIR and NMR)	83
3.4.4.	Catalytic activity	89
3.4.5.	Hydrophobic HSO ₃ -CH ₃ NOS-F and HSO ₃ -CH ₃ NOS-F hybrid materials	91
3.5.	<i>Conclusions</i>	98
3.6.	<i>References</i>	101
4. Hybrid Mesoporous Silica-Supported Base Organocatalysts for C-C Bond Formation		107
4.1.	<i>Amine-silanol cooperative catalysis for C-C bond formation</i>	111
4.2.	<i>Scope of this work</i>	117
4.3.	<i>Experimental</i>	119
4.3.1.	Synthesis of the materials	119
4.3.2.	Characterization	120
4.3.3.	Catalytic tests	121
4.4.	<i>Results and discussion</i>	123
4.4.1.	Synthesis and characterization of the hybrid base catalysts	123
4.4.2.	Catalytic activity	132
4.5.	<i>Synthesis of silica-supported phosphazene materials (P1)</i>	146
4.6.	<i>Conclusions</i>	150
4.7.	<i>References</i>	153
5. Synthesis of Multi-Functional Hybrid Catalysts for Cascade Reactions		157
5.1.	<i>Silica-supported palladium nanoparticles</i>	161
5.2.	<i>Silica-supported Pd organometallic complexes</i>	165
5.2.1.	Pd-based N-Heterocyclic Carbenes (NHCs)	165
5.2.2.	Pd-BINAP complexes	167
5.3.	<i>Furfural as “green” building block</i>	169
5.4.	<i>Scope of this work</i>	171
5.5.	<i>Experimental</i>	173
5.5.1.	Synthesis of the materials	173
5.5.2.	Characterization	174

5.5.3. Catalysis	174
5.6. <i>Results and discussion</i>	175
5.6.1. Bi-functional catalysts featuring Pd nanoparticles	175
5.6.2. Bi-functional catalysts featuring palladium complexes	182
5.7. <i>Conclusions</i>	189
5.8. <i>References</i>	191
6. General Conclusions	195
<i>Appendix 1: Characterization Techniques</i>	203
<i>Appendix 2: List of Figures and Tables</i>	213
<i>Scientific Contribution</i>	223
