Contents

1 Introduction to the Facial Analysis Problem **1**
- 1.1 Introduction . . . 1
- 1.2 Neurological base of the Facial Analysis . . . 2
- 1.3 Facial Analysis in Computer Vision . . . 3
  - 1.3.1 Face Detection: Definition and Applications . . . 3
  - 1.3.2 Face Recognition: Definition and Applications . . . 5
  - 1.3.3 Challenges of Facial Analysis . . . 7
- 1.4 Supervised Algorithms . . . 8
- 1.5 Summary of Contributions . . . 9
- 1.6 Outline of the Dissertation . . . 10

2 Facial Representation and Normalization **11**
- 2.1 Spatial Representation of Faces . . . 11
- 2.2 Importance of the Intensity-based Facial Representation . . . 12
- 2.3 Study of Color Spaces for Face Representation . . . 13
  - 2.3.1 RGB Model . . . 14
  - 2.3.2 HSV Model . . . 15
  - 2.3.3 Opponent Color Model . . . 16
  - 2.3.4 Discriminant Color Space - DCS . . . 17
- 2.4 Face Image Normalization . . . 18
  - 2.4.1 Geometrical Normalization . . . 19
  - 2.4.2 Intensity-based Normalization and application to Color Images . . . 20
  - 2.4.3 Normalization for Experiments . . . 21

3 Evaluation Methodology in Facial Analysis **23**
- 3.1 Introduction . . . 23
- 3.2 Methodology for Classification Algorithms . . . 24
  - 3.2.1 Similarity Measures . . . 25
  - 3.2.2 Distribution of the sample datasets . . . 27
  - 3.2.3 Binary Classification Cases . . . 28
  - 3.2.4 Basic Classification Measures . . . 29
- 3.3 Evaluation Methodology for Face Detection with Eye Location . . . 30
- 3.4 Evaluation Tools for Face Recognition . . . 32
  - 3.4.1 Distinction between Face Identification and Face Verification . . . 32
  - 3.4.2 Error Measures for Verification Problems . . . 33
  - 3.4.3 Rank Curves . . . 34

3.4.4 Receiver Operating Characteristic - ROC curves 36
3.4.5 Detection Error Trade-off – DET curves 37

4 Texture Feature Analysis for Biometric Characterization 39
4.1 Motivation and Contributions 39
4.2 Introduction and biological context of the texture features 40
4.3 State of the Art of Texture Descriptors 42
4.4 Gabor Filters 43
4.5 Histograms of Oriented Gradients 45
4.5.1 SIFT Features 45
4.5.2 HOG features 47
4.6 Study of the HOG features to describe Facial Elements 52
4.6.1 Selection of generic values 53

5 Precise Face Detection using Eye Location 55
5.1 Introduction 55
5.1.1 The necessity of automatic eye location 55
5.2 Motivation and Contributions 57
5.3 State of the Art 59
5.3.1 Algorithms for Face Detection with Eye Location 59
5.3.2 Selection of relevant Eye Location algorithms 61
5.4 Overview of our Eye Location approach 63
5.5 Coarse Face Detection - AdaBoost 66
5.5.1 Motivation to use the AdaBoost classifier 66
5.5.2 Validation of the Coarse Face Detection 67
5.6 Extraction of Eye Candidates - Boosting 69
5.6.1 Architecture of the Candidates Extraction 69
5.6.2 Boosting Location 70
5.6.3 Clustering and Classification techniques 72
5.6.4 Training of the Boosting Classifier 77
5.6.5 Validation of the Eye-Candidates Extraction Stage 79
5.7 Feature-based Eye-Candidate Selection 81
5.7.1 Architecture of the Eye-Candidates Selection 82
5.7.2 Generation and Normalization of face-candidates 83
5.7.3 HOG Features for Eye Description 85
5.7.4 SVM classification of HOG features 86
5.7.5 Training Methodology for the SVM classifier 88
5.8 Evaluation of the Eye Location System Developed 94
5.8.1 Control of the face alarms of a face detection system . . . 95
5.8.2 Comparative Study of the Eye Detection system 95
5.8.3 Comparative Study of the computational cost for the Eye Location system 98
5.9 Conclusions 98

6 Face Recognition using Face Graph Algorithms 101
6.1 Introduction 101
6.2 Motivation and Contributions 103
6.3 State of the Art 104
6.3.1 Works on Face Recognition 105
6.3.2 Non-Deformable Rigid Square Grids 107

6.3.3 Active Appearance Models - AAM face graphs 108
6.4 HOG-EBGM: HOG-based Elastic Bunch Graph Matching 110
6.4.1 Introduction 110
6.4.2 Theoretical Development 110
6.5 Colored HOG-EBGM: CHOG-EBGM 116
6.5.1 Basics of CHOG-EBGM 116
6.5.2 Theoretical Development 117
6.6 Set-up Experiments for HOG-based Face Recognition Algorithms 119
6.6.1 Optimum size of the HOG descriptor for Face Recognition 119
6.6.2 Face Recognition using HOG-AAM 122
6.6.3 Face Recognition using HOG-Grids 126
6.7 Evaluation of the HOG-EBGM algorithm 129
6.7.1 HOG-EBGM versus Gabor-EBGM. 130
6.7.2 Landmark Location: HOG-EBGM versus AAM 136
6.7.3 Evaluation of HOG-EBGM compared to other holistic face recognition algorithms 137
6.7.4 HOG-EBGM compared to other HOG-based FGAs 140
6.8 Effect of automatic eye location on face recognition 150
6.9 Evaluation of the Color HOG-EBGM algorithm 152
6.9.1 Analysis of CHOG-EBGM for face identification 153
6.9.2 Study of CHOG-EBGM for face verification 154
6.10 Conclusions 158
6.10.1 HOG-EBGM compared to Gabor-EBGM. 158
6.10.2 HOG-EBGM compared to HOG-AAM and HOG-Grid . . 159
6.10.3 CHOG-EBGM compared to the standard HOG-EBGM . 161

7 Results of the MOBIO contest for a HOG feature-based solution 163
7.1 Introduction to the MOBIO contest 163
7.2 Motivation to participate in the MOBIO contest 164
7.3 The MOBIO database 166
7.3.1 Composition of the MOBIO database 166
7.3.2 The MOBIO evaluation protocol 167
7.4 HOG-EBGM with eye location 170
7.4.1 Face Detection, Cropping and Normalization 170
7.4.2 Face Graph Extraction 171
7.4.3 Video Feature Extraction 173
7.5 Discussion on the results in the MOBIO competition 174
7.5.1 Performance Evaluation Protocol 174
7.5.2 Evaluation of the two HOG-EBGM solutions proposed. . 175
7.5.3 Comparative results of all the solutions in the MOBIO competition for face recognition 175
7.6 Conclusions 179

8 Conclusions, dissemination and future lines of research 181
8.1 Conclusions 181
8.1.1 Eye Location 182
8.1.2 Face Recognition 183
8.1.3 Integrated System 184
8.2 Dissemination and Applications 185

8.2.1 Scientific Publications and International Conferences . . . 185
8.2.2 Research Projects . . . 186
8.2.3 Industrial Applications . . . 188
8.3 Future Work . . . 189

A Dimension Reduction Methods **193**
A.1 The need for dimension reduction in feature-based face analysis . 193
A.2 Principal Component Analysis - PCA . . . 193
A.3 Linear Discriminant Analysis - LDA . . . 195
A.4 Techniques deriving from the LDA algorithm . . . 196
A.4.1 PCA on null-spaces . . . 197
A.4.2 Orthogonal Linear Discriminant Analysis - OLDA . . . 198
A.4.3 Regularized LDA . . . 199
A.5 Kernel Fisher Analysis - KFA . . . 200

B Public Face Databases and Evaluation Protocols **203**
B.1 BioID Database . . . 203
B.2 Yale Database . . . 204
B.3 AR Database . . . 205
B.4 CVL Database . . . 205
B.5 FERET Database . . . 205
B.6 FRGCv2 Database . . . 206
