

Chapter 1. General Introduction.....	1
1.1. Introduction to photochemistry.....	3
1.2. Photolabile protecting groups.....	7
<u>1.2.1. Phenacyl-like PPGs.....</u>	<u>7</u>
<u>1.2.2. Anthraquinone derivatives.....</u>	<u>10</u>
<u>1.2.3. α,α-Diaryl salicyl alcohol derivatives.....</u>	<u>11</u>
1.3. Discovering the dark side of the light.....	12
<u>1.3.1. Direct and indirect interaction of light with biomolecules.....</u>	<u>13</u>
1.3.1.1. Direct absorption.....	14
1.3.1.2. Indirect light absorption.....	16
1.3.1.2.1. Type I reactions.....	17
1.3.1.2.2. Type II reactions.....	20
1.3.1.2.3. Triplet-triplet energy transfer.....	21
1.3.1.2.4. Exogenous and endogenous photosensitizers....	23
- <i>Exogenous photosensitizers</i>	23
- <i>Endogenous photosensitizers</i>	26
1.4. Solar filters.....	28
1.5. Bibliography.....	37
Chapter 2. General objectives.....	49
Chapter 3. Mechanistic insights into the avobenzone-based drug photocages.....	53

Outline

3.1. Introduction.....	55
3.2. Results and discussion.....	58
<u>3.2.1. Influence of solvent on the photorelease of AB-KP.....</u>	58
3.2.1.1. Preliminary steady-state photolysis studies of AB-KP in EtOH and hexane.....	59
3.2.1.2. Studies on the nature of the singlet excited states.....	61
3.2.1.3. Nanosecond laser flash photolysis Experiments.....	64
3.2.1.4. Ultrafast transient absorption spectroscopy Experiments.....	68
3.2.1.5. Theoretical analysis on the influence of solvent in the triplet energy order of AB(K) and KP in the AB-KP system.....	71
<u>3.2.2. Photophysics of AB systems linked to a drug of lower triplet energy value.....</u>	77
3.2.2.1. Fluorescence experiments.....	77
3.2.2.2. Steady-state photolysis of the new system.....	80
3.2.2.3. Laser flash photolysis experiment.....	81
3.3. Conclusion.....	84
3.4. Experimental section.....	85
<u>3.4.1. Synthesis.....</u>	85
<u>3.4.2. NMR spectra.....</u>	91
3.5. Bibliography.....	94
Chapter 4. Oxybenzone-based photocages for the photorelease of carbonyl groups.....	97

4.1. Introduction.....	99
4.2. Results and discussion.....	100
<u>4.2.1. Design and synthesis of a new dyad model based on oxybenzone filter.....</u>	100
<u>4.2.2. Preliminary steady-state photolysis study of OB-BP.....</u>	103
<u>4.2.3. Characterization of the triplet excited state.....</u>	106
<u>4.2.4. Nature and reactivity of the triplet excited state.....</u>	109
<u>4.2.5. Mechanistic insights.....</u>	112
4.2.5.1. The role of a photooxidant in the process.....	112
4.2.5.2. A new OB based system caging the CBP.....	115
<u>4.2.6. Applications.....</u>	130
4.2.6.1. HPLC analysis of the steady-state photolysis of compounds OB-AP, OB-TL and OB-KP.....	132
4.3. Conclusion.....	135
4.4. Experimental section.....	136
<u>4.4.1. Synthesis.....</u>	136
<u>4.4.2. NMR spectra.....</u>	151
4.5. Bibliography.....	163

Chapter 5. Photochemistry of DNA lesions:

5-formyluracil versus 5-formylcytosine.....	167
5.1. Introduction.....	169
5.2. Results and discussion.....	173
<u>5.2.1. Characterization of the singlet excited state.....</u>	173
<u>5.2.2. Phosphorescence emission.....</u>	175
<u>5.2.3. Characterization by laser flash photolysis.....</u>	177
5.2.3.1. Characterization of the transient species.....	177

Outline

5.2.3.2. Triplet-triplet energy transfer rates to Thy-Thy.....	180
<u>5.2.4. Steady-state photolysis of Thy-Thy in the presence of ForU and ForC.....</u>	183
<u>5.2.5. Mechanistic aspects revealed by molecular modeling.....</u>	187
5.2.5.1. Potential energy landscapes of ForU and ForC.....	187
5.2.5.2. Non-adiabatic dynamics in the TD-DFT framework.....	191
5.2.5.3. Analysis of the most active modes of ForU and ForC.....	193
5.2.5.4. Potential energy landscape of ForU-Thy and ForC-Thy systems.....	197
5.3. Conclusions.....	203
5.4. Experimental section.....	205
<u>5.4.1. Synthesis.....</u>	205
<u>5.4.2. NMR spectra.....</u>	208
5.5. Bibliography.....	209

Chapter 6. Insertion of 5-formyluracil into oligodeoxynucleotides using a photoremovable protecting group.....	215
6.1. Introduction.....	217
6.2. Results and discussion.....	221
6.2.1. Selection of the photolabile protecting group.....	221
<u>6.2.2. Synthesis of the dForU building block (dForU-BB-PPG-1).....</u>	223

6.2.3. Steady-state studies using the nucleoside.....	227
6.2.4. Incorporation of ForU into deoxynucleotides.....	228
6.3. Conclusion.....	232
6.4. Experimental section.....	233
 6.4.1. Synthesis.....	233
 6.4.2. NMR spectra.....	243
6.5. Bibliography.....	252
Chapter 7. Instrumentation.....	255
 7.1 Absorption measurements.....	257
 7.2 Emission measurements.....	257
 7.2.1. Fluorescence.....	257
 7.2.2. Phosphorescence.....	257
 7.3. Steady-state photolysis.....	258
 7.4. Laser Flash Photolysis (LFP).....	258
 7.5. Femtosecond transient absorption spectroscopy.....	259
 7.6. Nuclear Magnetic Resonance (NMR).....	260
 7.7. HPLC analyses.....	260
 7.8. UPLC-HRMS analyses.....	261
 7.9. Computational details.....	262
Chapter 8. General conclusions.....	265
Chapter 9. Summary/Resumen/Resum.....	271
 Summary.....	273
 Resumen.....	275
 Resum.....	277
Chapter 10. Scientific contribution.....	281

Outline

10.1. Contribution to Conferences.....	283
10.2. Publications.....	284
<u>10.2.1. Related to this Doctoral Thesis.....</u>	284
<u>10.2.2. Other publications.....</u>	285
