Abstract	v
Resumen	vii
Resum	ix
Acknowledgments	xi
List of abbreviations	xiii
1 Introduction	1
1.1 Background and motivation	1
1.2 Fundamentals of light-sound interaction	4
1.2.1 Cavity-based optomechanics	4
1.2.2 Travelling-wave stimulated Brillouin scattering	7
2 Optomechanics with a full phononic bandgap crystal cavity	9
2.1 Introduction	9
2.2 OM crystal cavity design	10
2.2.1 Photonic and phononic band diagrams	11
2.2.2 Acousto-optic interaction	13
2.2.3 Fabricated OM cavity	15
2.3 Optomechanical microwave oscillator	18
2.3.1 OMO phase noise	21
2.3.2 RMS Jitter	23
2.3.3 Allan deviation	23
2.4 OM frequency comb generation	24
2.4.1 Temporal OFC dynamics	27
2.5 Experimental setups	29
2.5.1 Optical and mechanical cavity characterization	29
2.5.2 Optomechanical coupling rate measurement	30
3 All-optical frequency conversion	35
3.1 Introduction	35
3.2 Long-term stability	37
3.3 Frequency conversion in the lasing regime	38
3.3.1 Data stream modulation using OFDM	39
3.3.2 Downconversion using the first harmonic of the mechanical resonance	40
3.3.3 Upconversion for higher order harmonics	43

3.4	Experimental setup	46
3.4.1	OFDM Frequency conversion setup	46
4	Multimode phonon lasing in an OMC	47
4.1	Introduction	47
4.2	Multiple mechanical mode confinement	48
4.2.1	Phononic band diagram approach	49
4.2.2	Individual single-mode phonon lasing	52
4.3	Multimode phonon lasing	53
4.3.1	Driving the multimode lasing state	54
4.3.2	Comparative stability analysis	58
4.4	Experimental setup	61
4.4.1	Multimode oscillation driving setup	61
5	High-index disk optomechanics of supercavity modes	63
5.1	Introduction	63
5.2	Quasi-BIC modes in high-index disks	64
5.2.1	Scattering cross section	64
5.2.2	Optomechanical coupling	65
5.3	Pedestal's substrate mechanical leakage	67
6	Strong light-sound interaction in unreleased Si-based waveguides	71
6.1	Introduction	71
6.2	Description of the light - sound waveguiding system	73
6.3	AO interaction and Brillouin gain	76
6.4	Intramodal first order mode interaction	77
6.4.1	Forward Stimulated Brillouin Scattering	77
6.4.2	Backward Stimulated Brillouin Scattering	80
6.5	Enhancement of the Brillouin gain at low temperature	82
6.6	Practical implementation	82
7	Conclusions and perspectives	85
	Appendices	91
A	OM crystal cavities fabrication	92
B	Taper loop fabrication	93
C	OFDM signal description	96
D	Author's merits	97
D.1	Publications	97
D.2	Conferences	98
	Bibliography	100
