Table of Contents

1 Introduction **1**

1.1 Background and context 3

1.2 Previous related work 4

1.3 Objectives of the thesis 5

1.4 Thesis document structure 6

Bibliography 8

2 Literature review **11**

2.1 Introduction 13

2.2 Lubrication of ICE 13

2.2.1 Lubrication regimes 14

2.2.1.1 Hydrodynamic lubrication 15

2.2.1.2 Boundary lubrication 15

2.2.1.3 Mixed lubrication 15

2.2.1.4 Elastohydrodynamic lubrication 15

2.2.2 Lubrication of the main tribological pairs in ICE 16

2.2.2.1 Piston-cylinder liner assembly 16

2.2.2.2 Journal bearings 18

2.2.2.3 Valve train 19

2.2.3 Engine oil rheology 20

2.2.3.1 Engine oil composition 20

2.2.3.2 Dynamic viscosity 22

2.2.3.3 Kinematic viscosity 23
2.2.3.4 Density 26
2.3 Friction mechanical losses 26
2.3.1 Piston-cylinder liner assembly 26
2.3.2 Journal bearings 29
2.3.3 Valve train 29
2.3.4 Parameters affecting friction force 29
2.4 Theoretical models to estimate the lubrication of the piston-cylinder liner assembly 32
2.4.1 Analytical approach 33
2.4.2 Numerical approach 39
2.4.3 Commercial models for piston lubrication 43
2.5 Experimental measurement of friction in the piston-cylinder liner assembly 44
2.5.1 IMEP 44
2.5.2 Floating Liner 44
2.6 Use of low viscosity engine oils to reduce friction losses 52
2.6.1 HTHS viscosity 53
2.6.2 Engine oil standards for fuel economy 53
2.6.3 Research on LVEOs 54
2.6.3.1 Use of friction modifiers 60
2.6.4 LVEOs current and future market share 61
2.7 Discussion 61
Bibliography 63

3 Low viscosity engine oils evaluation for fuel economy 75
3.1 Introduction 77
3.2 Experimental setup 77
3.3 Methodology for the engine bench tests 79
3.3.1 Test points 80
3.3.2 Oil formulations 80

3.4 Vehicle model 81
3.4.1 Driving cycles 85
3.5 Results under stationary conditions 89
3.6 Results for real driving conditions 93
3.7 Results' discussion 96
Bibliography 97

4 Development of a Floating Liner test rig 99
4.1 Introduction 101
4.2 Description of the floating liner measurement principle 101
4.3 Design of the test rig 102
4.3.1 Engine selection 103
4.3.2 Force sensors selection 105
4.3.3 Designed and modified components 107
4.3.3.1 Considerations for the structural analysis 109
4.3.3.2 Upper locking system 111
4.3.3.3 Radial support 114
4.3.3.4 External structure 117
4.3.3.5 Base plate 120
4.4 Auxiliary systems 122
4.4.1 Lubrication system 123
4.4.2 Transmission system 125
4.4.3 Data acquisition system 125
4.5 Friction force measurement analysis 128
4.6 Performance assessment of the floating liner test rig 130
4.6.1 Tests reproducibility 131
4.6.2 Tests repeatability 132
4.7 Experimental results 133
4.7.1 Engine speed and oil temperature 134
4.7.2 Oil formulation 138

4.7.3 OCR tangential force 143
4.8 Discussion 151
4.A Appendix: Kinematics and dynamics of the floating liner engine 153
4.A. 1 Kinematics 153
4.A. 1.1 Kinematics of the point A 154
4.A. 1.2 Kinematics of the point B 155
4.A. 1.3 Kinematics of the point G 155
4.A. 2 Dynamics 157
4.A. 2.1 Dynamics of the connecting rod 158
4.A. 2.2 Dynamics of the piston 159
Bibliography 160

5 Theoretical model to estimate the friction losses in the piston compression ring and cylinder liner interface 163
5.1 Introduction 165
5.2 One-dimensional model description 165
5.2.1 Non-dimensional Reynolds equation 168
5.2.2 Pressure distribution 169
5.2.2.1 Finite differences method 169
5.2.3 Load carrying capacity 171
5.2.4 Oil flow rate 174
5.2.5 Lubricant oil starvation 176
5.2.6 Friction force 177
5.2.7 Engine oil rheology 181
5.2.8 Piston compression ring and liner surface topography . . 181
5.2.8.1 Piston compression ring 182
5.2.8.2 Cylinder liner 183
5.3 Results 184
5.3.1 Engine speed 185
5.3.2 Oil temperature 188
5.3.3 Oil formulation 191

5.3.4 Piston ring radius of curvature 193
5.3.5 Piston ring tangential force 197
5.4 Discussion 198
5.A Verification of the oil pressure distribution on an inclined pad . 201
Bibliography 204

6 Comparison of experimental results obtained in the Floating Liner and the lubrication model 207
6.1 Introduction 209
6.2 Experimental tests in the floating liner for the compression ring 209
6.3 Simulation of the compression ring lubrication 215
6.4 Comparison of results 217
6.5 Discussion 223
Bibliography 224

7 Conclusions and future work 225
7.1 Introduction 227
7.2 Conclusions and main contributions 227
7.2.1 LVEOs evaluation for fuel economy 227
7.2.2 Floating liner test rig 229
7.2.3 Compression ring simulation model 230
7.3 Future work 231
7.3.1 Experimental work 231
7.3.2 Theoretical work 232

Appendix: Publications 235
