Abstract iii

Contents xvii

List of Figures xix

Acknowledgements xxv

1 Introduction and objectives 1

1.1 Objectives . . . 3

1.2 Summary of the state of art . . . 5

1.3 Organization of this document . . . 10

2 Vertical Elasticity on Marathon and Chronos Mesos frameworks 13

2.1 Introduction . . . 13

2.2 Description of the problem . . . 16

2.3 Related work . . . 19
2.4 Underlying technologies . . . 20
2.5 The proposed system architecture . . . 24
2.6 Results and discussion . . . 35
2.7 Conclusions . . . 48

3 A self-managed Mesos cluster for data analytics with QoS guarantees 49

3.1 Introduction . . . 49
3.2 Requirements & State of the art . . . 50
3.3 Architecture Design . . . 58
3.4 Results . . . 68
3.5 Discussion . . . 78
3.6 Conclusions . . . 79

4 A Cloud Architecture for the Execution of Medical Imaging Biomarkers 81

4.1 Introduction . . . 81
4.2 State of the art . . . 83
4.3 Architecture . . . 87
4.4 Results . . . 93
4.5 Conclusions and future work . . . 97

5 Seamlessly managing HPC workloads through Kubernetes 99

5.1 Introduction . . . 99
5.2 Scenario and related work . . . 101
5.3 The proposed solution: *hpc-connector* . . . 104
5.4 Use case: Segmentation of neuroblastoma tumours . . . 106

5.5 Conclusions 108

6 Automated Isolation Management of Processing Workflows in a Multi-Tenant and Multi-Site Kubernetes clusters - A Medical Imaging Use Case 111

6.1 Introduction 112
6.2 Motivation and Objectives 114
6.3 Related work 115
6.4 kube-authorizer 121
6.5 Architecture design 124
6.6 Threat model 131
6.7 Conclusions 136

7 Discussion of the results 137

7.1 Contributions 138
7.2 Publications 148
7.3 Research projects 149

8 Conclusions 153

8.1 Future work 155

Bibliography 157

Glossary 183
