LIST OF TABLES	5
LIST OF FIGURES	7
LIST OF ABBREVIATIONS	10
CHAPTER I. GENERAL INTRODUCTION	15
1.1 Poultry meat sector	17
1.1.1 Poultry meat production.....	17
1.1.2 Animal welfare and resilience concepts	18
1.1.3 Evolution of poultry production systems	19
1.2 Influence of intestinal health in poultry	21
1.2.1 Intestinal microorganisms in poultry production	21
1.2.1.1 Definitions.....	21
1.2.1.2 Influence on poultry health	23
1.2.1.3 Methods for studying microbial communities	24
1.2.2 Zoonotic microorganisms in poultry production	25
1.2.2.1 <i>Salmonella</i> spp. characteristics, prevalence and control	25
1.2.3 Antimicrobial resistance in poultry production	28
1.2.3.1 Definition and development.....	28
1.2.3.2 Commensal <i>Escherichia coli</i> as antimicrobial resistance sentinel bacterium	30
1.2.3.3 Mechanisms of antimicrobial resistance	31
1.2.3.4 Presence of antimicrobial resistance in poultry production	34
1.3 Main control measures for zoonotic and resistant microorganisms in poultry	36

1.3.1 Biosecurity	36
1.3.2 Broiler breeds	38
1.3.3 Precision livestock farming	39
1.4 Study cornerstone.....	39
1.5 References	41
CHAPTER II. OBJECTIVES.....	55
CHAPTER III. EXPERIMENTAL CHAPTERS	59
3.1 Effect of the genetic breed on intestinal microbiota and antimicrobial resistance dynamics.....	61
3.1.1 Fast and slow-growing management systems: characterisation of broiler caecal microbiota development throughout the growing period.....	63
3.1.1.1 Abstract	65
3.1.1.2 Introduction	66
3.1.1.3 Material and methods	67
3.1.1.4 Results	73
3.1.1.5 Discussion	82
3.1.1.6 Conclusion.....	85
3.1.1.7 References	86
3.1.1.8 Supplementary material	94
3.1.2 The dynamic of antibiotic resistance in commensal <i>Escherichia coli</i> throughout the growing period in broiler chickens: fast-growing vs. slow-growing breeds.....	101
3.1.2.1 Abstract	103
3.1.2.2 Introduction	104
3.1.2.3 Material and methods	105

3.1.2.4 Results	107
3.1.2.5 Discussion	113
3.1.2.6 Conclusion.....	115
3.1.2.7 References	116
3.2 Effect of the management system on the intestinal microbiota, the antimicrobial resistance dynamics and <i>Salmonella</i> spp. epidemiology.....	123
3.2.1 Assessment of microbiota modulation in poultry to combat infectious diseases	125
3.2.1.1 Abstract	127
3.2.1.2 Introduction	128
3.2.1.3 Material and methods	129
3.2.1.4 Results	132
3.2.1.5 Discussion	136
3.2.1.6 Conclusion.....	138
3.2.1.7 References	139
3.2.1.8 Supplementary material	145
3.2.2 Commensal <i>Escherichia coli</i> antimicrobial resistance and multidrug-resistance dynamics during broiler growing period: commercial vs. improved farm conditions.....	153
3.2.2.1 Abstract	155
3.2.2.2 Introduction	156
3.2.2.3 Material and methods	157
3.2.2.4 Results	161
3.2.2.5 Discussion	167
3.2.2.6 Conclusion.....	169
3.2.2.7 References	170

3.2.3 Influence of farm management on the dynamics of <i>Salmonella</i> Infantis shedding and antibiotic resistance during growing period: commercial vs. optimal conditions	177
3.2.3.1 Abstract	179
3.2.3.1 Introduction	180
3.2.3.3 Material and methods	181
3.2.3.4 Results	183
3.2.3.5 Discussion	188
3.2.3.6 Conclusion.....	190
3.2.3.7 References	191
CHAPTER IV. GENERAL DISCUSSION.....	199
4.1 References	211
CHAPTER V. CONCLUSIONS	223

LIST OF TABLES

Table 1. Composition of starter and grower diets for FG and SG breeds.	70
Table 2. Weight of the animals (weight±s.d) and conversion rate (CR±s.d.) during the productive cycle for FG and SG management systems.....	74
Table 3. Alpha diversity according to management system (FG or SG) and sampling moment based on Chao 1 index.	76
Table 4. Taxonomic profiles at phylum level according to management system (FG or SG) and sampling moment based on MetagenomeSeq parametric test.	77
Table 5. Taxonomic profiles at genus level according to sampling moment in FG management system.	80
Table 6. Taxonomic profiles at genus level according to the sampling moment in SG management system.	81
Table S1. Statistical comparation of alpha diversity between sample groups based on Chao 1 index.	95
Table S2. Statistical comparation of alpha diversity between sample groups based on Shannon index.	96
Table S3. Statistical comparation of alpha diversity between sample groups based on Simpson index.	97
Table S4. Statistical comparation of alpha diversity between sample groups based on Observed OTUs index.....	98
Table S5. Different taxonomic profiles at genus level according to the moment of the growing period in fast (FG) and slow-growing (SG) breeds.	99
Table S6. Statistical comparation between beta-diversity indexes calculated according the different methods.....	100
Table 7. Antibiotic resistance rates according to the antibiotic and the moment of the growing period in FG and SG breeds.....	109
Table 8. Number of <i>E. coli</i> strains isolated resistant to the different number of antibiotics tested according to the sampling moment in FG and in SG breeds.	112

Table 9. Composition of starter and grower diets.	131
Table 10. Alpha diversity (Chao 1 index) according to the moment of the growing period in CFC and OFC.....	134
Table 11. Taxonomic profiles at phylum level according to sampling moment in CFC and OFC.	134
Table S7. Statistical comparison of alpha diversity between sample groups based on Chao 1 index.....	146
Table S8. Statistical comparison of alpha diversity between sample groups based on Shannon index.....	147
Table S9. Statistical comparison of alpha diversity between sample groups based on Simpson index.....	148
Table S10. Statistical comparison of alpha diversity between sample groups based on Observed OTUs index.....	149
Table S11. Statistical comparison between beta diversity indexes calculated according the different methods.....	151
Table 12. Composition of starter and grower diets.	159
Table 13. Mortality rate (MR), body weight (BW), feed intake (FI) and feed conversion rate (FCR) of the animals for both experimental groups: Commercial farm conditions (CFC) and improved farm conditions (IFC), throughout the growing period.	161
Table 14. Antimicrobial resistance rates obtained for each antibiotic in different sampling moments and experimental groups (commercial vs. improved farm conditions) throughout the growing period.	164
Table 15. Antibiotic resistance isolates according to the antibiotic and the moment of the growing period in CFC and OFC.	186
Table 16. Number of <i>Salmonella</i> strains isolated resistant to the different antibiotics tested according to different environmental farm conditions.....	187

LIST OF FIGURES

Figure 1. Poultry meat production in 2019 (Percentage share of EU members, based on tonnes of carcass weight).	17
Figure 2. Evolution of protection tools in broiler production.	21
Figure 3. A schematic highlighting the composition of the term microbiome.....	22
Figure 4. Characteristic <i>Salmonella</i> cells and related structures.....	26
Figure 5. Distribution (%) of the human EU <i>Salmonella</i> serovars in poultry production.	27
Figure 6. Antimicrobial resistance development and spread, in a ‘One Health’ perspective.....	28
Figure 7. Timeline of antibiotics deployment vs. its antibiotic resistance observed.....	29
Figure 8. Characteristic <i>Escherichia coli</i> cells and related structures.....	31
Figure 9. General antimicrobial resistance mechanisms.	32
Figure 10. Horizontal resistance gene transmission between bacteria: conjugation, transduction and transformation.	33
Figure 11. Microbial community interactions affecting the response to antibiotic exposure. A: Exposure protection: resistant bacteria inactivating antibiotic concentration, protecting sensitive members of bacteria population. B: Collective tolerance: some species unable to form biofilm collaborating in established biofilms of other species. C: Collective resistance: susceptible community member of a bacterial population could activate their resistance mechanisms in the presence of other species. D: Due to the cross-feeding networks, tolerance to antibiotics is lowered to the level of the most susceptible community member, since resistant species are unable to grow due to the loss of essential recourses.....	34
Figure 12. Holistic definition of biosecurity.	36
Figure 13. Animals’ housing scheme in experiment 1.....	68
Figure 14. Experiment design management systems scheme in experiment 1.	69
Figure 15. Sample collection scheme in experiment 1.....	71

Figure 16. Evaluation of alpha diversity in fast and slow-growing management systems using different calculation measures. A: Chao 1. B: Shannon. C: Simpson. D: Observed OUTs.	75
Figure 17. Taxonomic analysis at genus level throughout the growing period. A: evolution of genera throughout the growing period for fast-growing management system. B: evolution of genera throughout the growing period for slow-growing management system.....	78
Figure 18. Evaluation of the beta diversity based on Bray-Curtis dissimilarity between sampling moments (arrival day, mid-period and end of the rearing period) for each management system. A: beta diversity represented by PCoA graphic for fast-growing management system. B: beta diversity represented by PCoA graphic for slow-growing management system.	82
Figure 19. Antimicrobial resistant <i>E. coli</i> strains dynamic in fast-growing and slow-growing breed throughout the growing period.....	108
Figure 20. Multidrug-resistant <i>E. coli</i> strains dynamic in fast-growing and slow-growing breed throughout the growing period.	110
Figure 21. Experiment design management systems scheme in experiment 2.	130
Figure 22. Animals' housing scheme in experiment 2.....	130
Figure 23. Sample collection scheme in experiment 2.....	132
Figure 24. Evaluation of alpha diversity in commercial and optimal farm conditions by using different calculation measures: Chao 1, Shannon, Simpson, Observed OUTs. ..	133
Figure 25. Evaluation of the beta diversity based on Bray-Curtis dissimilarity and comparison of genera presence in commercial and optimal farm conditions. A: PCoA graphic and similar vs. different genera for both experimental groups at mid-period. B: PCoA graphic and similar vs. different genera for both experimental groups at the end of the growing period.	136
Figure S1. Evaluation of the beta-diversity in commercial and optimal farm conditions. A: Beta diversity represented by PCoA graphic for both farm conditions at all sampling times. B: Beta diversity represented by Heatmap for both farm conditions at all sampling times.	150

Figure 26. Antimicrobial-resistant <i>E. coli</i> isolates dynamic for commercial (CFC) and improved farm conditions (OFC) throughout the growing period.....	162
Figure 27. Multidrug-resistant <i>E. coli</i> isolates dynamic for commercial (CFC) and optimal farm conditions (IFC) throughout the growing period.....	163
Figure 28. Number of <i>E. coli</i> strains isolated resistant to the different number of antimicrobials tested and their antimicrobial resistance pattern, according to commercial (CFC) and improved (IFC) farm conditions.	166
Figure 29. <i>Salmonella</i> excretion dynamic in commercial (CFC) and optimal (OFC) farm conditions during growing period.	184

LIST OF ABBREVIATIONS

%	Percentage
°C	Celsius degrees
AB	Antibiotic
AEMPS	Spanish Agency for Medicines and Health Products
AMA	Antimicrobial
AMP	Ampicillin
AMR	Antimicrobial Resistance
ANOVA	Analysis of Variance
API	Identification system for Enterobacteriaceae and other Gram-negative rods
AZM	Azithromycin
CAZ	Ceftazidime
CDC	Centers for Disease Control and Prevention
CECAV	Poultry Quality and Animal Feed Centre of the Valencia Region
CFC	Commercial Farm Conditions
CFU	Colony Forming Units
CHL	Chrolamphenicol
CIBIR	Centre for Biomedical Research of La Rioja
CIP	Ciprofloxacin
CITA	Centre for Research and Animal Technology
CR	Conversion Rate
CST	Colistin
CTX	Cefotaxime
DNA	Deoxyribonucleic Acid
E.	<i>Escherichia</i>
EC	European Commission

ECDC	European Centre for Disease Prevention and Control
EFSA	European Food Safety Authority
EMA	European Medicines Agency
ESVAC	European Surveillance of Veterinary Antimicrobial Consumption
EU	European Union
EUCAST	European Committee on Antimicrobial Susceptibility Testing
FAO	Food and Agriculture Organization of the United Nations
g	Grams
GEN	Gentamicyn
GLM	Generalised Linear Model
h	Hours
IFC	Improved Farm Conditions
ISO	International Organisation for Standardisation
IVIA	Valencian Institute for Agrarian Research
Kg	Kilograms
log	Logarithms
m²	Square metres
MDR	Multidrug-resistance
mL	Millilitres
MS	Member States
n	Number of samples
NAL	Nalidixic Acid
MPN	Most Probable Number
OECD	Organisation for Economic Co-operation and Development
OFC	Optimal Farm Conditions
OHC	One Health Commission
OIE	World Organisation for Animal Health
OTU	Operational Taxonomic Unit

P	Probability value
PCoA	Principal Coordinate Analysis
ppm	Particles Per Million
R²	R-squared
RNA	Ribonucleic Acid
rRNA	Ribosomal Ribonucleic Acid
S.	<i>Salmonella</i>
S.d.	Standard deviation
spp.	Species
std	Standard
SXT	Trimethoprim-sulfamethoxazole
TGC	Tigecycline
TMP	Trimethoprim
U.m.	Unclassified members
vol/vol	Volume to volume
vs.	Versus
WHO	World Health Organisation
wpi	Week Post-Infection
XLD	Xylose-Lysine-Desoxycholate
µL	Microlitres
µg	Micrograms
