Contents

Abstract ..... **III**
Contents ..... **XVI**
Chapter 1 Introduction **29**
1.1 Introduction 29
1.1.1 Water quality and water treatment for irrigation 31
1.1.2 Water quality and field monitoring 32
1.1.3 Wireless technologies in precision agriculture systems 34
1.1.4 IoT in precision agriculture 36
1.1.5 The use of drones in precision agriculture 38
1.1.6 Security concerns for precision agriculture systems 39
1.2 Objectives and motivation 40
1.3 Precedents 41
1.4 Thesis structure 42
Chapter 2 State of the Art **44**
2.1 Introduction 44
2.2 Water Management 46
2.3 Soil Monitoring 54
2.4 Weather Monitoring 57
2.5 Sensor Networks for Irrigation Systems 65

2.5.1. IoT Nodes for Irrigation Systems 66
2.5.2. Communication Technologies 69
2.5.3. Cloud Platforms 72
2.6. Discussion 75
2.6.1. Big Data Management and Analytics for Irrigation Optimization 75
2.6.2. Low-Cost Autonomous Sensors 77
2.6.3. Sustainable Irrigation Systems 77
2.6.4. Frequency of the Data Acquisition 79
2.6.5. New Forms of Data Acquisition 79
2.6.6 Underground communications 81
2.6.7. Security in IoT Systems for Irrigation 85
2.6.8 Common Architecture Designs for IoT Irrigation Systems for Agriculture 88
2.6.8.1 Field monitoring WSN 90
2.6.8.2 Water monitoring WSN 92
2.6.8.3 Meteorology monitoring WSN 93
2.6.9 Effects of vegetation on coverage and signal quality 93
2.6.10 Communication protocols intended for irrigation and agriculture monitoring systems 97
2.6.11 Unlicensed bands occupation and coexistence 99
2.6.12. Future Challenges of IoT Irrigation Systems 103
2.7 Conclusion 104
Chapter 3 Design of an Architecture for Irrigation 105
3.1 Introduction 105
3.2 Architecture description 105
3.2.1 Areas and elements of the architecture 106
3.2.2 Topology 110
3.2.3 Alternative architectures for specific needs 112
3.2.3.1 WSN for monitoring numerous trees 113
3.2.3.2 Architecture for remote fields with cellular connection 117
3.2.3.3 Architecture for IoUT functionalities 118
3.2.3.4 Architecture for the use of drones for data acquisition 119
3.2.3.5 Architecture for IoT irrigation system with security and management functionalities 120
3.3 Sensor nodes 122
3.3.1 Soil monitoring node 122
3.3.2 Water monitoring node 124

3.3.4 Meteorology monitoring node 126
3.3.4.1 Determination of data acquisition frequency 128
3.3.5 Actuator node 132
3.4 System operation algorithms 133
3.5 Proposed algorithm for irrigation 136
3.6 Conclusion 140
Chapter 4 Protocol Design 141
4.1 Introduction 141
4.2. Protocol description 141
4.3 States of the nodes 155
4.4 Conclusions 159
Chapter 5 Study Cases 160
5.1 Introduction 160
5.2 Multi-layer fog computing framework for constrained LoRa networks 160
5.3 Protocol design for LoRa nodes 166
5.4 Comprehensive security framework for a LoRa network for wastewater treatment 168
5.4.1 Overview of the system 168
5.4.2 Securing the system 169
5.4.2.1 Physical attacks 170
5.4.2.2 Attacks on the data in transit 171
5.4.2.3 Attacks on the management system 172
5.4.2.4 Attacks on the data 173
5.5 WSN for smart irrigation in citrus plots with fault-tolerance and energy-saving algorithms 175
5.5.1 Fault tolerance algorithm 178
5.5.2 Energy saving algorithm 181
5.5.3 Protocol description 182
5.6 Utilizing CoAP in IEEE 802.11 networks for PA 183
5.6.1 COAP 185
5.7 Decision-making algorithm for underground communication 187
5.8 The use of remote sensing drones as mobile gateway for WSN in precision agriculture 189
5.8.1. Drone parameters 189
5.8.2 Low-cost nodes for precision agriculture deployments 190
5.8.3 Antenna radiation model 192

5.8.4 System description 195
5.9 Conclusion 200
Chapter 6 Simulation Results 202
6.1 Introduction 202
6.2 Results for a multi-layer fog computing framework 202
6.3 Simulations of a LoRa protocol for wastewater treatment 208
6.3.1 Simulation Description 208
6.3.1.1 Water Details 209
6.3.1.2 Network Details 209
6.3.2 Results 211
6.3.2.1 Status of the SDs 211
6.3.2.2 Consumed Energy 215
6.3.2.3 Consumed Bandwidth 218
6.4 Simulations of WSN with fault-tolerance and energy-saving functionalities 221
6.4.1 Simulation description 221
6.4.2 Results 222
6.5 Simulations of collisions in IEEE 802.11 WSN for PA 225
6.6 Drone coverage analysis 227
6.6.1. Coverage analysis 227
6.6.2 Energy consumption 233
6.7 Conclusion 236
Chapter 7 Practical Experiments 237
7.1 Introduction 237
7.2 Results from tests on real devices of the proposed protocol 237
7.2.1 Testbed description 238
7.2.2 Test results 240
7.2.2.1 Consumed bandwidth 240
7.2.2.2 Packet loss 246
7.3 Coverage studies for different deployment strategies in varied environments 247
7.3.1 Coverage results for deployments with vegetation obstructions 247
7.3.1.1 Results 249
7.3.1.2 Discussion and challenges 262
7.3.1.3 Limitations of this study 265
7.3.2 Coverage results for underground deployments 265
7.3.2.1 Mathematical model for deployments with a height of 50 cm 267

7.3.2.2 Mathematical model for deployments at a height of 50 cm 271
7.3.2.3 Coverage results for all heights 274
7.3.3 Coverage results for LoRa low-cost nodes 277
7.4 Energy consumption comparison between WiFi and LoRa 280
7.5 Quantification of fruit production through image processing..... 284
7.5.1 Evaluation of best band combination..... 286
7.5.2 Correction of the distance effect 287
7.5.3 Analysis of histogram data..... 288
7.6 Conclusion 290
Chapter 8 Conclusion..... 291
8.1 Introduction..... 291
8.2 Conclusion 291
8.3 Faced problems 294
8.4 Personal contributions..... 295
8.5 Future research lines 295
8.6 Publications derived from the PhD Thesis 296
8.7 Other publications..... 297
References..... 301
