Abstract	iii
1 Network analysis of time series	9
1.1 Natural and horizontal visibility graphs	10
1.2 Properties of visibility graphs	12
1.3 Power-law degree distributions	20
1.4 Fitting degree distributions to power-law functions	24
1.5 Correlation matrices	27
2 Fractional calculus	35
2.1 Riemann-Liouville fractional derivative	36
2.2 Gründwald-Letnikov fractional derivative	37
2.3 Caputo fractional derivative	38
2.4 Discrete fractional calculus	40
3 Discrete fractional Wu-Baleanu time series	45
3.1 The logistic equation	45
3.2 Visibility graphs of the logistic equation	46

3.3	Wu-Baleanu equation	47
3.4	Feigenbaum diagrams of Wu-Baleanu equation	48
3.5	Visibility graphs of the Wu-Baleanu equation	50
3.6	Shannon entropy of the visibility graphs	50
3.7	Visibility graphs analysis.	51
4	Reaction times and ex-Gaussian distributions	55
4.1	Attention and reaction times	56
4.2	Ex-Gaussian distributions of RT.	58
4.3	Fitting data to an ex-Gaussian distribution	61
4.4	Alternatives to the ex-Gaussian distribution	62
5	Power-law distribution of natural visibility graphs from reaction times series	65
5.1	Materials and methods	66
5.2	Description of the RTs dataset	67
5.3	Power-law distribution of the NVGs degrees	69
5.4	Comparison between the power-law and the ex-Gaussian distribution parameters	74
5.5	Particular cases	77
5.6	Hurst exponents.	78
6	Conclusions	85
