

Index

Introduction	6
I. The contribution of yeast within the winemaking process	6
a. From a complete stranger to a model organism	6
b. The new challenges facing the wine industry today	7
c. Exploiting yeast diversity to meet the new expectations of wine consumers	9
d. <i>S. cerevisiae</i> and alternative species of winemaking interest, <i>S. uvarum</i> and <i>S. kudriavzevii</i>	11
i. <i>S. cerevisiae</i>	12
ii. <i>S. uvarum</i> and <i>S. kudriavzevii</i>	14
e. Yeast behavior during grape must fermentation	16
II. Central carbon and nitrogen metabolisms under winemaking condition	20
a. What is metabolism?	20
b. Fermentative metabolism	23
c. Nitrogen metabolism in winemaking	28
i. Amino acid catabolism	28
ii. Central nitrogen metabolism and anabolism of amino acids	30
d. Metabolism of wine aromas	33
III. Omics technologies and genome-scale modeling for the study of yeast metabolism	37
a. Omics technologies	37
b. Genome-scale modeling approach	41

Justification & objectives	65
CHAPTER 1	70
CHAPTER 2	128
CHAPTER 3	192
CHAPTER 4	248
General discussion	306
Conclusions	320
Annex I – Supplementary material	320
Annex II – Publications	380
