Nomenclature	xxi
1 Introduction	1
1.1 Research for jet engine turbines	1
1.2 Objectives of the work	3
1.3 Research methodology	5
1.4 Thesis outline	6
2 Experimental apparatus and numerical resources	7
2.1 The turbine test rig	7
2.2 The 1.5 turbine stage	10
2.2.1 The high pressure turbine stage	11
2.2.2 The multi-splitter low pressure vane	13
2.3 Turbine operating conditions	15
2.3.1 Design of the turbine operative conditions	15
2.3.2 Experimental test conditions	20
2.4 Numerical methods	25
3 Development of accurate rotor tip clearance measurements	29
3.1 Introduction	29
3.2 Measurement system	31
3.2.1 Capacitance sensor principle	31
3.2.2 System specifications	32
3.3 Data processing	34
3.3.1 Conventional calibration procedure	34
3.3.2 Advanced calibration refinement	36
3.3.3 Sensor self-calibration	38
3.3.4 Measurement data reduction	39
3.4 Probe performance	40
3.5 Uncertainty analysis	42
3.6 Turbine measurements	43
3.6.1 Sensor installation and in-situ calibration	43
3.6.2 Mean rotor tip clearance	47
3.6.3 Blade-to-blade rotor tip clearance	51
3.7 Conclusions	54
4 Aero-thermal flow field in the overtip casing of a transonic rotor	57
4.1 Introduction	57

4.2	Experimental approach	58
4.2.1	Experiment design	58
4.2.2	Rotor casing instrumentation	60
4.2.3	Measurement basics and data reduction	64
4.3	Results	81
4.3.1	Time-average results	81
4.3.2	Time-resolved results	84
4.4	Models for overtip heat transfer predictions	90
4.4.1	Zero-dimensional overtip flow model	90
4.4.2	Turbine design implications	94
4.5	Conclusions	95
5	Aero-thermal flow field of a downstream multi-splitter LP vane	97
5.1	Introduction	97
5.2	Analysis of the LP vane aerodynamics	100
5.2.1	Airfoil pressure instrumentation	101
5.2.2	Time-average pressure field	102
5.2.3	Time-resolved pressure field	106
5.2.4	Spectral analysis of the pressure field	112
5.2.5	Aerodynamic forces on the LP vane	114
5.3	Thermal loads through the LP vane passages	118
5.3.1	Heat transfer instrumentation and data reduction	119
5.3.2	Mid-span time-average heat transfer	123
5.3.3	Mid-span time-resolved heat transfer	131
5.4	Loss analysis of the multi-profile LP vane	134
5.4.1	Numerical campaign and CFD calibration	134
5.4.2	Impact of the multi-airfoil geometry on the vane outlet flow	138
5.4.3	Performance evaluation and comparison	140
5.5	Conclusions	143
6	Conclusion	147
	Bibliography	151
