Abstract ix

Resumen xi

Resum xiii

1 Introduction 1
- 1.1 Introduction to turbulence . . . 2
  - 1.1.1 Wall turbulence . . . 6
  - 1.1.2 The thermal field . . . 9
- 1.2 Lie symmetries . . . 12

2 Computational methods 13
- 2.1 Reynolds averaged Navier-Stokes equations . . . 14
- 2.2 Large Eddy Simulation . . . 16
- 2.3 Direct Numerical Simulations . . . 17
  - 2.3.1 State of the art of DNS . . . 18

3 Lie symmetries 29
- 3.1 Governing equations . . . 29
- 3.2 Lie Symmetries theory . . . 34
  - 3.2.1 Lie group of transformations . . . 34
  - 3.2.2 Infinitesimal transformations . . . 35
  - 3.2.3 Invariant functions and PDEs . . . 39
  - 3.2.4 Lie algorithm . . . 42
  - 3.2.5 Invariant Solutions . . . 46
- 3.3 Conclusions . . . 48

4 Methodology 49
- 4.1 Configuration of the Poiseuille flow simulations . . . 49
  - 4.1.1 Configuration of heat transfer simulations . . . 49
  - 4.1.2 Configuration of Poiseuille isothermal flow simulation . . . 56
- 4.2 Configuration of the Couette flow simulations . . . 57

4.3 Configuration of the stratified flow simulations 59

5 Results **63**
5.1 Poiseuille flows 63
5.1.1 Medium and low Reynolds and Prandtl numbers 64
5.1.2 Medium and low Reynolds numbers and high Prandtl numbers 75
5.1.3 High Reynolds number for $Pr = 0.71$ 85
5.1.4 Poiseuille isothermal flows 98
5.1.5 Scaling laws of velocity, temperature and high order moments with Lie symmetries 104
5.2 Other flows 115
5.2.1 Couette flows 115
5.2.2 Stratified flows 126

6 Conclusions **131**

7 Appendix **135**
7.1 Appendix A: a DNS code 135

Bibliography **145**
