

Table of contents

Acknowledgements	v
Abstract	vii
Resumen	ix
Resum	xi
1 Introduction and objectives	1
1.1 Objectives	5
1.2 Structure of the thesis	7
2 Diffraction Tomography	9
2.1 Introduction	9
2.2 Diffraction Tomography Approximations	11
2.2.1 Inverse Radon Transform	11
2.2.2 Helmholtz Equation	15
2.2.3 Green's function solution	16
2.2.4 Born approximation	16
2.2.5 Rytov approximation	17
2.3 Fourier diffraction theorem - Linear detector and plane-wave incidence . .	19
2.3.1 Implementation	22
2.3.2 Results	23
2.4 Circular Detector	31
2.4.1 Implementation with far-field approximation	33
2.4.2 Implementation without far-field approximation	38
2.5 Linear vs. Circular detector tomography	40
3 On-chip Tomographic Phase Microscopy	45
3.1 Introduction	45
3.1.1 Tomographic Phase Microscopy: State of the art	46

3.1.2	Lab-on-a-chip motivation	49
3.2	Nanoantennas	51
3.2.1	Fabrication	54
3.2.2	Far-field characterization	54
3.2.3	SNOM measurements	57
3.3	First cross-port circular design	62
3.3.1	Modeling and numerical simulations	63
3.3.2	Fabrication and characterization	67
3.3.3	Results: simulation and characterization	68
3.4	Circular tomography in baseline system	74
3.4.1	Baseline device modeling and simulations	76
3.4.2	Fabrication and characterization	78
3.4.3	Results	80
3.4.4	Tomography results	88
4	Invisibility Passive Devices	91
4.1	Introduction	91
4.2	Scattering Cancellation	93
4.3	Transformation Optics	97
4.4	Transformation optics - polygonal cloak	100
5	Conclusions and discussion	105
5.1	General discussion of the results	105
5.1.1	ODT Algorithms	105
5.1.2	Tomographic Phase Microscope via LoC technology	106
5.1.3	Invisibility	107
5.2	Main conclusions	108
5.3	Future work	110
5.3.1	Diffraction Tomography	110
5.3.2	Towards LoC TPM	112
5.4	Concluding remarks	113
Appendix A	Tomography phantoms	117
A.1	Cell phantom	117
A.2	Shepp-Logan adapted phantom	118
A.3	NTC logo phantom	119
Appendix B	Supporting material for tomography	121
B.1	Variable change in Fourier Slice Theorem	121
B.2	Reduction of the scattering field in circular boundary	122

B.3 Reverse mapping for circular detector algorithm	124
Appendix C Supporting material for Invisibility Passive Devices	127
C.1 Scattering Cross Section (SCS)	127
C.2 Scattering cancellation - cloak modeling	127
C.3 Transformation optics cloak	128
C.4 Hexagonal polygonal cloak	130
C.5 Square polygonal cloak	136
Author's Merits	139
