

CONTENTS

I	Introduction	1
	1. Food microstructure and digestion	1
	2. Carbohydrate digestion	2
	2.1. Carbohydrates and diabetes	2
	2.2. <i>In vivo</i> and <i>in vitro</i> digestion studies	4
	2.3. Starch	4
	2.3.1. Structure	4
	2.3.2. Starch digestion	6
	3. Strategies to modulate starch digestion	8
	3.1. Effect of starch characteristics on its digestion	8
	3.2. Inhibition of starch digestive enzymes	9
	3.2.1. Dietary fibers	9
	3.2.2. Acidic ingredients	10
	3.2.3. Polyphenols	10
	4. Starch and polyphenol interaction	17
II	Objectives	27
III	Results	31
CHAPTER 1	Mastication of crisp bread: role of bread texture and structure on texture perception	33
	1.1. Introduction	34
	1.2. Materials and methods	35
	1.2.1. Bread samples and characterization	35
	1.2.2. FOP assessment	36
	1.2.3. Characterization of bolus properties	37

CHAPTER 

1.2.4. Sensory assessment	37
1.2.5. Statistical data analyses	38
1.3. Results and discussion	38
1.3.1. Bread characteristics	38
1.3.2. Sensory evaluation	40
1.3.3. Characterization of FOP and bolus properties	41
1.3.4. Texture, FOP and sensory correlations	43
1.4. Conclusions	44
Effect of bread structure and <i>in vitro</i> oral processing methods in bolus disintegration and glycemc index	49
2.1. Introduction	50
2.2. Materials and methods	51
2.2.1. Materials	51
2.2.2. Bread preparation	51
2.2.3. Bread characterization	52
2.2.4. <i>In vitro</i> oro-gastro-intestinal digestion	52
2.2.5. Reducing sugars released and <i>in vitro</i> starch digestibility	53
2.2.6. Particle size distribution of the bolus during <i>in vitro</i> digestion	53
2.2.7. Statistical analyses	54
2.3. Results and discussion	54
2.3.1. Variation of bread structure as a consequence of changes in the breadmaking process	54
2.3.2. Bolus particle size throughout <i>in vitro</i> digestion	56
2.3.3. <i>In vitro</i> digestion and expected glycemc index	59
2.3.4. Multivariable analysis	60
2.4. Conclusions	62

CHAPTER 

<i>In vitro</i> digestibility of gels from different starches: relationship between kinetic parameters and microstructure	67
3.1. Introduction	68
3.2. Materials and methods	69

3.2.1. Materials	69
3.2.2. Chickpea starch isolation	69
3.2.3. Starch gel preparation	69
3.2.4. Chemical composition of starches	70
3.2.5. <i>In vitro</i> oro-gastro-intestinal digestion and reducing sugar analysis	70
3.2.6. Starch digestion modelling	71
3.2.7. Scanning electron microscopy (SEM)	71
3.2.8. Statistical analyses	72
3.3. Results and discussion	72
3.3.1. Starch gels	72
3.3.2. <i>In vitro</i> digestion and modelling	76
3.4. Conclusions	82

CHAPTER

4

Understanding phenolic acids inhibition of α -amylase and α -glucosidase and influence of reaction conditions 89

4.1. Introduction	90
4.2. Materials and methods	91
4.2.1. Materials	91
4.2.2. Inhibition assays of α -amylase	92
4.2.3. Inhibition assays of α -glucosidase	93
4.2.4. Percentage of inhibition and IC_{50}	93
4.2.5. High-performance liquid chromatography analysis	94
4.2.6. Statistical analyses	94
4.2.7. Structure-activity relation	94
4.3. Results and discussion	94
4.3.1. Inhibition of α -amylase	96
4.3.2. Polyphenols inhibition of α -glucosidase	99
4.4. Conclusions	103

CHAPTER

5

***In vitro* inhibition of starch digestive enzymes by ultrasound-assisted extracted polyphenols from *Asco-phyllum nodosum* seaweeds** 109

5.1. Introduction	110
5.2. Material and methods	111

5.2.1. Materials	111
5.2.2. Seaweed sampling	111
5.2.3. Chemical analysis	112
5.2.4. Inhibition assays of α -amylase and α -glucosidase	112
5.2.5. Chromatographic separation	115
5.2.6. $^1\text{H-NMR}$	115
5.2.7. Statistical analyses	116
5.3. Results and discussion	116
5.3.1. Seaweed extracts chemical composition	116
5.3.2. Inhibition effect of seaweed extracts against α -amylase and α -glucosidase enzymes	117
5.3.3. Seaweed freeze-dried extracts characterization: chromatography (RP-HPLC-UV) and nuclear magnetic resonance ($^1\text{H-NMR}$)	120
5.4. Conclusions	124

CHAPTER

6

Starch gels enriched with phenolic acids: effects on structure and digestibility	131
6.1. Introduction	132
6.2. Material and methods	133
6.2.1. Materials	133
6.2.2. Starch gels preparation and pasting properties of the slurries	133
6.2.3. High-performance liquid chromatography analysis of phenolic acids	134
6.2.4. Scanning electron microscopy	134
6.2.5. Gel firmness	135
6.2.6. Hydrolysis kinetics	135
6.2.7. Statistical analysis	136
6.3. Results and discussion	136
6.3.1. Starch-polyphenol gels formation	136
6.3.2. Textural and structural characterization of starch gels	140
6.3.3. Digestibility of starch-polyphenol gels	144
6.4. Conclusions	149

IV	General discussion	155
-----------	---------------------------	-----

V	Conclusions	165
