# Synthesis of the Complete Inverse Kinematic Model of Non-Redundant Open-Chain Robotic Systems Using Groebner Basis Theory

---

Author: José Guzmán-Giménez

Director: Dr. Ángel Valera Fernández

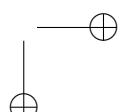

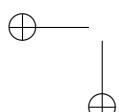

November 2021

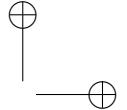

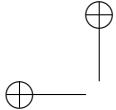

# Contents

<b>Abstract</b>	iii
<b>Resumen</b>	v
<b>Resum</b>	vii
<b>Contents</b>	ix
<b>1 Introduction</b>	1
1.1 Background: The Kinematic Problem . . . . .	1
1.2 Objective and main contribution . . . . .	5
1.3 Test Benches . . . . .	6
1.4 Structure of this work . . . . .	13
<b>2 Groebner Bases theory: applications in engineering and basic concepts</b>	15
2.1 Applications of Groebner Bases theory in engineering projects . . . . .	15
2.2 Polynomials, Ideals and Affine Varieties . . . . .	16
2.3 Monomial Ordering in Groebner Bases . . . . .	20
<b>3 Description of the Developed Procedure</b>	23
3.1 Structure of the Synthesized IKM . . . . .	24
3.2 IKM Core Module . . . . .	24
3.3 State Estimator . . . . .	51
3.4 IKM Derivatives . . . . .	54
3.5 Registers . . . . .	57

ix

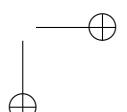

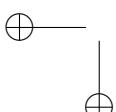

<b>4 Performance Analysis of the Developed Procedure</b>	<b>59</b>
4.1 Resolution of the Kinematic Problem by Traditional Methods . . . . .	60
4.2 Hexapod's IKM . . . . .	68
4.3 PUMA's IKM . . . . .	75
<b>5 Discussion, Conclusions and Future Work</b>	<b>81</b>
5.1 Summary of the developed procedure and discussion . . . . .	81
5.2 Publications . . . . .	84
5.3 Conclusions . . . . .	84
5.4 Future Work . . . . .	85
<b>Bibliography</b>	<b>87</b>

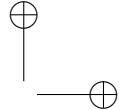

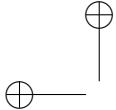

# List of Figures

1.1	Inverse Kinematic Model in the robot's control system . . . . .	2
1.2	BH3-R hexapod walking robot . . . . .	7
1.3	Coordinate systems for the hexapod's leg . . . . .	8
1.4	Unimate's PUMA 560 robotic arm . . . . .	10
1.5	Coordinate systems for the PUMA 560 robotic arm . . . . .	11
3.1	Structure of the synthesized IKM . . . . .	24
3.2	Flowchart of the developed procedure for the synthesis of the IKM Core module . . . . .	26
3.3	Graphical representation of the expected values for the variables related with the hexapod's leg DoFs . . . . .	32
3.4	IKM Core's algorithm . . . . .	41
3.5	Algorithm used to solve quadratic equations . . . . .	45
3.6	Algorithm used to solve bi-quadratic equations . . . . .	46
3.7	Algorithm used to solve quartic polynomial equations . . . . .	48
3.8	Algorithm used to calculate one real root of the cubic obtained during a quartic's equation resolution . . . . .	49
3.9	State estimator's algorithm . . . . .	53
3.10	IKM Derivative's algorithm . . . . .	56
4.1	Geometric solution for the PUMA's first joint . . . . .	62
4.2	Geometric solution for the PUMA's third joint . . . . .	63
4.3	Geometric solution for the PUMA's second joint . . . . .	64
4.4	Performance analysis of the six synthesized IKMs for the hexapod's leg . .	69

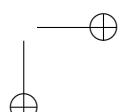

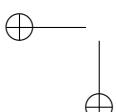

4.5	Detailed view of the performance of the hexapod's IKM generated by lex order 6 . . . . .	70
4.6	Performance analysis of the synthesized IKM for the hexapod's leg . . . . .	72
4.7	Trajectory tracking analysis for the hexapod's final IKM . . . . .	74
4.8	Performance analysis of the synthesized IKM for the PUMA 560 . . . . .	78
4.9	Trajectory tracking analysis for the PUMA's IKM . . . . .	79

# List of Tables

1.1	Denavit-Hartenberg Parameters of the hexapod's leg . . . . .	9
1.2	Hexapod's leg parameter dimensions . . . . .	9
1.3	Movement range of the hexapod's actuators . . . . .	9
1.4	Denavit-Hartenberg Parameters of PUMA 560 . . . . .	11
1.5	PUMA 560 parameters dimensions . . . . .	12
1.6	Movement range of the PUMA's actuators . . . . .	12
3.1	Expected values for the trigonometric variables related with the rotational DoFs of the hexapod's leg . . . . .	33
3.2	Relevant lex orders for the hexapod's leg . . . . .	33
3.3	Possible types of polynomial equations found in the calculated Groebner Bases	35
3.4	Computational cost required to solve different types of polynomial equations on an ARM Cortex-M4 CPU . . . . .	35
3.5	Computational cost for a microcontroller with an ARM Cortex-M4 CPU .	36
3.6	Selection of the lex order for the Hexapod's IKM . . . . .	37
4.1	Maximum and average RMS errors obtained when all the points of the hexapod's workspace are processed by each of the six synthesized IKMs . . . . .	73
4.2	Computation times of the six IKMs generated for the hexapod's leg and its reference model . . . . .	75
4.3	Expected values for the trigonometric variables related with the PUMA's rotational DoFs . . . . .	76
4.4	Relevant lex orders for the PUMA manipulator . . . . .	76
4.5	Selection of the lex order for the PUMA's IKM . . . . .	77

4.6 Computation times of the six IKMs generated for the PUMA 560 and its reference model . . . . .	80
