Contents **i**

List of Figures **v**

List of Tables **xv**

Nomenclature **xvii**

1 Introduction **1**
1.1 General context 1
1.2 Atomization 3
1.3 Literature review 8
1.3.1 Computational studies of liquid atomization 10
1.3.2 Experimental studies on the near-field 17
1.4 Objectives 29
1.4.1 Computational study 30
1.4.2 Experimental study 31
1.5 Thesis outline 32
References 33

2 Computational Methodology **43**
2.1 Introduction 43
2.2 Governing equations for multiphase flows 45
2.3 Numerical solution for the Navier-Stokes equations 46
2.3.1 Temporal integration 47
2.3.2 Spatial integration 48
2.3.3 Advection term 49

2.3.4 Viscous term 50
2.3.5 Solving the pressure equation 50
2.4 Fluid interface advection 52
2.4.1 Surface tension treatment 56
2.5 PARIS Simulator Code 59
References 60

3 Inflow Boundary Conditions 65
3.1 Introduction 65
3.2 Numerical methods 66
3.3 Simulation parameters 67
3.4 Cases of study 68
3.5 Computational meshes 69
3.6 Validation 72
3.6.1 Round cases 73
3.6.2 Elliptical cases 75
3.7 Detection and analysis of vortex 79
3.8 Main conclusions 85
References 87

4 Post-processing methodologies 91
4.1 Introduction 91
4.2 Flow field post-processing 92
4.2.1 Introduction to turbulence 92
4.2.2 Flow field methodology 95
4.3 Droplet post-processing 96
4.3.1 Droplet analysis in the literature 96
4.3.2 Droplet detection algorithm 99
References 102

5 The Influence of Reynolds Number 105
5.1 Introduction 105
5.2 Spray morphology study 107
5.3 Flow field analysis 111
5.3.1 Centreline statistics 113
5.3.2 Axial distributions 117
5.3.3 Turbulent statistics on $x/D_n \approx 25$ 122
5.4 Droplet cloud study 129
5.4.1 Size distribution 130
5.4.2 Radial distribution 134

5.4.3 Velocity distribution 135
5.4.4 Axial distribution 139
5.5 Conclusions 142
References 145

6 The Influence of Weber Number **147**
6.1 Introduction 147
6.2 Spray morphology study 148
6.3 Flow field analysis 151
6.3.1 Centreline statistics 151
6.3.2 Axial distributions 154
6.3.3 Turbulent statistics on $x/D_n \approx 25$ 156
6.4 Droplet cloud study 158
6.4.1 Size distribution 159
6.4.2 Radial distribution 162
6.4.3 Axial distribution 165
6.4.4 Velocity distribution 172
6.5 Conclusions 175
References 176

7 Phenomenological model **179**
7.1 Introduction 179
7.2 Statistical distribution selection 179
7.3 Model based on the Reynolds Number 182
7.4 Model based on the Weber Number 184
7.5 Model definition 188
7.6 Conclusions 197
References 200

8 The Influence of nozzle shape **201**
8.1 Introduction 201
8.2 Spray morphology study 203
8.3 Flow field analysis 208
8.3.1 Centreline statistics 208
8.3.2 Axial distributions 210
8.3.3 Plane statistics 214
8.4 Droplet cloud study 221
8.4.1 Size distribution 223
8.4.2 Transversal distribution 225
8.4.3 Axial distribution 228

8.4.4 Velocity distribution 232
8.5 Conclusions 236
References 240

9 Experimental study of the influence of the turbulence on the spray angle variability in the near field 241
9.1 Introduction and experimental setup 241
9.2 Spray contour detection methodologies 243
9.3 Spray angle results 246
9.4 Conclusions 250
References 252

10 Conclusions and Future Works 253
10.1 Overall conclusions 253
10.1.1 Considerations on the effects of the inflow conditions on the primary atomisation process using DNS 254
10.1.2 Considerations on the phenomenological model 260
10.1.3 Considerations on the near region spray angle variability using NFM 261
10.2 Future Works 262
10.2.1 Further analysis on the influences of non-dimensional numbers, using DNS with AMR 262
10.2.2 Approaching the experimental and computational operating conditions 263
10.2.3 Analysis of aeronautical burners pressure-swirl atomisers using DNS 264

Global Bibliography 265
