<b>List of Figures</b>	<b>xiv</b>
<b>List of Tables</b>	<b>xvii</b>
<b>1 Introduction: Construction 4.0</b>	<b>1</b>
1.1 Research Problems . . . . .	5
1.2 Research Objectives . . . . .	6
1.3 Thesis Outlines . . . . .	7
<b>2 Construction 4.0 technologies</b>	<b>9</b>
2.1 Introduction . . . . .	9
2.2 Methodology . . . . .	9
2.3 ICT Technologies . . . . .	10
2.3.1 Big Data . . . . .	11
2.3.2 Internet of Things and enabling technologies . . . . .	14
2.3.3 Semantic Technologies . . . . .	17
2.4 Artificial Intelligence and Machine Learning . . . . .	19
2.4.1 Supervised Learning . . . . .	20
2.4.2 Reinforcement Learning . . . . .	24
2.5 Additive Manufacturing . . . . .	26
2.5.1 Information flow in AM processes . . . . .	27

2.5.2	AM in the construction industry . . . . .	27
2.6	Conclusions . . . . .	29
<b>3</b>	<b>Information and Communication Technologies Applied to Intelligent Buildings</b>	<b>30</b>
3.1	Introduction . . . . .	30
3.2	Intelligent buildings review framework . . . . .	32
3.2.1	The ICT construction sub-layer components . . . . .	33
3.2.2	Generic ICT sub-layer components identification . . . . .	36
3.3	Applications of ICT to the Intelligent buildings . . . . .	41
3.3.1	Planning / Design . . . . .	41
3.3.2	Construction . . . . .	42
3.3.3	Operation/Maintenance . . . . .	44
3.3.4	Improvement / Disposal . . . . .	48
3.3.5	Full Life-Cycle . . . . .	48
3.4	Discussions . . . . .	50
3.4.1	Research findings . . . . .	50
3.5	Conclusions and future works . . . . .	61
<b>4</b>	<b>Automated Location of Steel Truss Bridge Damage Using Machine Learning and Raw Strain Sensor Data</b>	<b>63</b>
4.1	Introduction . . . . .	63
4.2	Methods and Materials . . . . .	66
4.2.1	Fault Analysis: selecting damage scenarios . . . . .	66
4.2.2	Location of Control Points . . . . .	66
4.2.3	Data Generation . . . . .	67
4.2.4	Data Collection . . . . .	68
4.2.5	Feature Selection and ML Dataset . . . . .	68

4.2.6	ML Dataset and CNN Classifier: Damage Severity Assessment and Damage Detection and Location . . . . .	69
4.2.7	The ML Tools used . . . . .	70
4.3	The Case Study . . . . .	71
4.3.1	The Quisi bridge . . . . .	72
4.3.2	Method . . . . .	73
4.3.3	Results: Damage Location and Damage Severity Assessment test . . . . .	82
4.4	Conclusions . . . . .	85
<b>5</b>	<b>A new concept for large additive manufacturing in construction: Tower crane-based 3D printing controlled by deep reinforcement learning</b>	<b>87</b>
5.1	Introduction . . . . .	87
5.2	Literature review . . . . .	90
5.2.1	Large 3D construction printing . . . . .	90
5.2.2	Artificial intelligence in the control for 3D printing and tower-crane handling . . . . .	91
5.3	Methods and material . . . . .	93
5.3.1	Tower-crane based 3D printing controlled by AI . . . . .	93
5.3.2	DRL control framework for the tower crane and extruder swing effect . . . . .	95
5.4	Results and validation . . . . .	101
5.4.1	Training and simulation . . . . .	101
5.4.2	Testing and validation . . . . .	102
5.5	Conclusions . . . . .	106
<b>6</b>	<b>General results discussion</b>	<b>108</b>
6.1	ICT technologies for intelligent systems in life cycle management of constructions . . . . .	108

---

6.2	ML in fault detection of structural systems . . . . .	110
6.3	AI in additive manufacturing for the construction industry . . . . .	112
6.3.1	Positive aspects . . . . .	112
6.3.2	Limitations and recommendation for future researches . . .	114
6.3.3	Comparison with classic 3D printing approaches . . . . .	115
<b>7</b>	<b>Conclusions</b>	<b>116</b>
<b>Bibliography</b>		<b>119</b>
