<b>Contents</b>	<b>i</b>
<b>List of Figures</b>	<b>v</b>
<b>List of Tables</b>	<b>xiii</b>
<b>Nomenclature</b>	<b>xv</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Current and future technologies of clean aeroengines . . . . .	5
1.2 Thesis objective . . . . .	9
1.3 Thesis outline . . . . .	12
References . . . . .	14
<b>2 Fundamentals of numerical modelling in gas turbine burners</b>	<b>19</b>
2.1 Equations of fluid mechanics . . . . .	22
2.2 Turbulence theory . . . . .	26
2.2.1 Overview of turbulence modelling frameworks . . . . .	28
2.2.2 Large-Eddy Simulation . . . . .	30
2.3 Combustion theory . . . . .	35
2.3.1 Laminar combustion . . . . .	36
2.3.2 Turbulent combustion . . . . .	40
2.3.3 Combustion modelling . . . . .	45
2.4 Soot modelling . . . . .	51
2.4.1 Fundamentals of soot production . . . . .	51
2.4.2 Numerical prediction . . . . .	54
2.5 Spray modelling . . . . .	58

2.5.1	Modelling frameworks for sprays . . . . .	60
	References . . . . .	64
<b>3</b>	<b>Computational methodology</b>	<b>81</b>
3.1	Large-eddy simulation framework . . . . .	82
3.1.1	Governing equations . . . . .	83
3.1.2	LES sub-grid closure . . . . .	84
3.1.3	Numerical methods . . . . .	86
3.2	Turbulent combustion model . . . . .	86
3.2.1	Flamelet method . . . . .	87
3.2.2	Turbulence-chemistry interaction . . . . .	92
3.2.3	Tabulation strategy . . . . .	94
3.3	Soot modelling . . . . .	95
3.3.1	Sectional soot method . . . . .	95
3.3.2	Description of the FGM-CDSM formalism for LES . . .	101
3.4	Spray modelling . . . . .	104
3.4.1	Droplet kinematics . . . . .	104
3.4.2	Heat and mass transfer models . . . . .	105
3.4.3	Material properties and tabulated quantities . . . . .	106
3.5	Summary . . . . .	107
	References . . . . .	110
<b>4</b>	<b>Combustion modelling of a spray-flame</b>	<b>117</b>
4.1	Case description . . . . .	119
4.1.1	Experimental test rig . . . . .	119
4.1.2	Details of the modelling approach . . . . .	120
4.1.3	Numerical setup . . . . .	129
4.2	Flow field description . . . . .	132
4.3	Spray assessment . . . . .	135
4.4	Flame structure . . . . .	141
4.5	Analysis of local extinction . . . . .	146
4.5.1	Extinction due to droplet-flame interaction . . . . .	147
4.5.2	Extinction due to turbulence-flame interactions . . . . .	151
4.6	Summary . . . . .	155
	References . . . . .	157
<b>5</b>	<b>Computationally efficient soot modelling on a pressurized gas turbine burner</b>	<b>161</b>
5.1	Case description . . . . .	163
5.1.1	Experimental test rig . . . . .	163

---

5.1.2	Details of the modelling approach . . . . .	164
5.1.3	Numerical setup . . . . .	173
5.2	Gas phase . . . . .	174
5.2.1	Grid quality . . . . .	175
5.2.2	Flow field description . . . . .	177
5.2.3	Flame characteristics . . . . .	182
5.3	Soot predictions . . . . .	191
5.3.1	Soot Volume Fraction assessment . . . . .	192
5.3.2	Analysis of soot formation and oxidation . . . . .	193
5.3.3	Particle Sizes Distribution . . . . .	201
5.4	Effect of secondary oxidation air . . . . .	204
5.4.1	Gas phase description . . . . .	205
5.4.2	Soot predictions . . . . .	213
5.5	Summary . . . . .	218
	References . . . . .	222
<b>6</b>	<b>Conclusions and future works</b>	<b>227</b>
6.1	Conclusions . . . . .	227
6.2	Future works . . . . .	233
	References . . . . .	235
<b>A</b>	<b>Effect of the computational grid in the CRSB</b>	<b>239</b>
<b>B</b>	<b>Effect of the computational grid in the DLR burner</b>	<b>243</b>
<b>C</b>	<b>Temporal statistics in the DLR burner</b>	<b>247</b>
