Abstract	5
Introduction	8
1. <i>The flowering process</i>	8
2. <i>Genetic control of flowering</i>	12
3. <i>Hormonal control of flowering</i>	15
4. <i>Nutritional control of flowering</i>	17
5. <i>Convergence of hormonal, genetic and epigenetic inhibitory signals in citrus flowering</i>	18
<i>Hypothesis and objectives</i>	20
Material and Method	21
1. <i>Plant material</i>	21
2. <i>Treatments</i>	22
3. <i>Sampling</i>	23
4. <i>Phenotypic evaluation</i>	23
4.1. <i>Sprouting and flowering evaluation</i>	23
4.2. <i>Photosynthesis</i>	24
5. <i>Laboratory methods</i>	24
5.1. <i>RNA extraction</i>	24
5.2. <i>Gene expression analysis by RT-qPCR</i>	24
5.3. <i>Sequence analysis and phylogenetic trees</i>	27
5.4. <i>Metabolomic analysis (Carbohydrates & Aminoacids)</i>	27
5.5. <i>In situ Hybridization</i>	28
5.6. <i>RNA-seq. Whole Transcriptome Sequencing</i>	29
5.7. <i>Hormone isolation, purification, and quantification</i>	30
5.8. <i>Chromatin immunoprecipitation</i>	31
6. <i>Experimental design</i>	31
6.1. <i>Experiments from Chapter I & II. Gibberellins</i>	31
6.2. <i>Experiments from Chapter III. Auxins</i>	36
6.3. <i>Experiments from Chapter IV. Girdling</i>	39
7. <i>Statistical analysis</i>	44

Results	45
1. Chapter I. Gibberellic acid and fruit do not operate the same mechanism in Citrus flowering inhibition. Effect in the leaf	45
1.1. Effect of Gibberellic Acid (GA ₃) and Paclobutrazol (PBZ) treatments on Citrus flowering. The fruit interference	45
1.2. Spatial control of flowering inhibition by GA ₃	48
1.3. Correlation between GA synthesis and concentration in the leaves and CiFT3 gene expression	49
1.4. Effect of GA ₃ in flowering-time genes expression	54
2. Chapter II. The role of GAs in Citrus flowering inhibition. Effect in the bud	58
2.1. The temporal evolution of gibberellin metabolism in the phloem and buds of ON, OFF, and thinned trees	58
2.2. Endogenous Control of Gibberellin Biosynthesis at the Time of Floral Differentiation: ON vs. OFF	64
2.3. Anatomical Localization of CENTRORADIALIS (CEN) Expression in the Bud	71
3. Chapter III. The role of Auxin in Citrus flowering	73
3.1. Exogenous control of flowering with 2,4-D	73
3.2. Effect of 2,4-D treatments on the expression of flowering genes	76
3.3. The effect of fruit in auxin synthesis, transport and concentration	80
4. Chapter IV. Isolating axillary buds from fruit inhibitory effect: Girdling and Double Girdling	84
4.1. The effect of girdling on flowering depends on the place where it is carried out	84
4.2. RNA Sequencing: common pathways which are activated/repressed in Double Girdling, Small fruit, and OFF-trees to promote flowering	92
4.2.1. What happens in natural conditions? Differentially expressed genes (DEGs) in ON vs OFF trees	92

4.2.2. <i>What do the flowering phenotypes have in common? ON vs OFF, AB-G & SF</i>	107
4.3. <i>Effect of double-girdling (AB-G) on the expression of flowering time and floral identity genes</i>	123
4.4. <i>Effect of double-girdling (AB-G) on hormonal regulation</i>	129
4.5. <i>Effect of double girdling (AB-G) on carbohydrates metabolism</i>	134
Discussion	142
1. <i>Which endogenous signals are the most likely candidates to regulate Flower Induction?</i>	142
2. <i>Neither GA nor auxin activate CcMADS19 in the leaf</i>	143
3. <i>Both GA and auxin regulate flower bud differentiation</i>	146
4. <i>Double girdling but no single girdling promotes FI</i>	151
Conclusions	154
