Abstract	i
Resumen	iii
Resum	v
Agradecimientos	xi
List of Symbols	xxix
Abbreviations	xxxiii
1 Introduction	1
1.1 Introduction	1
1.2 Work motivation	2
1.3 Literature review	2
1.4 Scope and work organization	9
2 Multibody system analysis	11
2.1 Multibody systems and joints	12
2.2 Dependent and independent coordinates	12
2.3 Kinematic analysis of multibody systems	13
2.3.1 Frames of reference for a multibody system	13
2.3.2 Transformation matrix	15
2.4 Rigid body kinematics	17
2.4.1 General displacement	17
2.4.2 Velocity analysis	18
2.4.3 Acceleration analysis	19
2.5 Dynamic analysis of multibody systems	20
2.5.1 Generalized coordinates	20
2.5.2 Virtual work	20
2.5.3 Equations of motion of multibody system	22
3 Dynamics of railway systems	25

3.1	Introduction	25
3.2	Track geometric description	26
3.2.1	Terminology of railway tracks	27
3.2.1.1	Track gauge	27
3.2.1.2	Horizontal curves	28
3.2.1.3	Track width	28
3.2.1.4	Super-elevation	28
3.2.1.5	Track grad	28
3.2.2	Cant angle definition in the track model	28
3.2.3	Spatial track centreline	30
3.2.4	Transition curves and super-elevation ramps	31
3.2.4.1	Transition curves	32
3.2.4.2	Transition curves in the space	32
3.2.4.3	Mathematical definition of the transition curves	33
3.3	Wheel-rail interaction phenomenon	36
3.3.1	Classification of the wheel-rail contact theories	37
3.4	Geometrical contact problem	38
3.4.1	Proposed solutions for the geometric contact problem	39
3.4.2	The visible profile method	39
3.4.3	Contact points detection using geometric relational properties	41
3.4.4	The wheel-rail differential contact method	43
3.5	Normal contact problem	45
3.5.1	Hertz normal contact force	46
3.5.2	Size and shape of the contact patch	47
3.6	Tangential contact problem	48
3.6.1	Creepage phenomenon	49
3.6.1.1	Longitudinal Creepage	50
3.6.1.2	Lateral Creepage	50
3.6.1.3	Spin Creepage	51
3.6.2	The Linear Theory of rolling contact	52
3.6.3	FASTSIM algorithm	55
3.6.3.1	Mathematical development of FASTSIM algorithm	55
3.6.3.2	Calculation of the flexibility parameter	57
3.6.4	Polach nonlinear creep force model	58
3.6.4.1	Mathematical development of Polach algorithm	58
4	Multibody methodology for railway analysis	63
4.1	Introduction	63
4.2	Reference frames description	65
4.2.1	Reference frames	66
4.2.2	Fixed reference frame	67
4.2.3	Track reference frame	67
4.2.4	Body reference frame	68
4.3	Reference frame transformations	69

4.3.1	Transformation from track to fixed reference frame	69
4.3.2	Transformation from body to fixed reference frame	70
4.4	Track model	72
4.4.1	Track modelling using analytical segments	73
4.4.2	Straight line stage	73
4.4.3	Transition curve stage	75
4.4.4	Circular curve stage	77
4.5	Theoretical development of the proposed methodology	78
4.5.1	Kinematic analysis of rigid body system	78
4.5.2	Total kinetic energy of the system	79
4.5.3	Translational kinetic energy of the system	80
4.5.4	Rotational kinetic energy of the system	80
4.5.5	Dynamic analysis of rigid body system	81
4.5.5.1	Lagrangian approach for calculating the equations of motion	81
4.5.5.2	Quadratic velocity vector	82
4.5.5.3	Derivatives of the K.E with respect to generalized coordinates	83
4.5.6	Generalized forces associated to the generalized coordinates	83
4.5.6.1	Virtual displacement	84
4.5.6.2	Generalized force corresponding to generic force vector applied on the body	84
4.5.6.3	Virtual work	84
4.5.6.4	Generalized force	84
4.6	Equations of motion development	86
4.6.1	Translational equation of motion	86
4.6.2	Rotational equation of motion	86
4.6.3	Equations of motion of wheelset	87
4.6.3.1	Wheelset	87
4.6.3.2	Wheelset frame of reference	88
4.6.3.3	Kinematic analysis of wheelset system	89
4.7	Wheel-rail contact model	90
4.7.1	Contact geometric problem	90
4.7.1.1	Procedure used in the solution of the geometrical contact problem	91
4.7.1.2	Assumptions	91
4.7.1.3	Contact surfaces definitions	92
4.7.1.4	Procedure used to obtain the intersection between contact surfaces	93
4.7.1.5	Intersection between straight line and conical segment	95
4.7.1.6	Strip definition	98
4.7.2	Position vector of the contact point	100
4.7.3	Velocity vector of the contact point	102
4.8	Wheelset dynamic analysis	103

4.8.1	Generalized forces corresponding to contact forces	103
4.8.2	Generalized forces corresponding to the spin contact moment	104
4.8.3	Generalized forces corresponding to internal forces	105
5	Simulation results	109
5.1	Introduction	109
5.2	General description of the simulation tool	110
5.2.1	Data entry to the simulation tool	110
5.2.2	Program flow chart	115
5.2.3	Program run and extracted data	122
5.3	Testing the simulation tool using simplified contact model	123
5.3.1	Transversal geometry of the designed track	123
5.3.2	Multibody model for TGV001 vehicle	124
5.3.3	Simplified contact model	130
5.3.4	Simulation scenarios and obtained results	132
5.3.4.1	Single bogie negotiating a straight track	133
5.3.4.2	Single bogie negotiating a curved track	136
5.3.4.3	Complete vehicle negotiating straight track	137
5.3.4.4	Complete vehicle negotiating curved track	138
5.4	Comparison with the Manchester Benchmark	141
5.4.1	Track case definition	141
5.4.2	Benchmark Vehicle 1	142
5.5	Application and comparison with SIMPACK program	155
5.6	Application of Polach contact model	166
6	Conclusions and Future works	171
6.1	Conclusions	171
6.2	Future developments	174
A	Kinematic and Dynamic Background	177
A.1	Introduction	177
A.2	Rotation matrix	177
A.2.1	Rotation matrix definition	177
A.2.2	Derivation of the rotation matrix	178
A.2.3	Euler angles	178
A.2.4	Basic rotations	179
A.2.4.1	Rotation about X-axis	179
A.2.4.2	Rotation about Y-axis	179
A.2.4.3	Rotation about Z-axis	180
A.3	Successive rotations	181
A.3.1	Single-frame method	181
A.3.2	Multiframe method	181
A.4	Transformation matrices	182
A.4.1	Track transformation matrix	182
A.4.2	Solid transformation matrix	183

A.4.3	Intermediate transformation matrix	183
A.5	Angular velocity matrices	183
A.5.1	Absolute angular velocity matrix	183
A.5.2	Skew symmetric matrix of the track angular velocity vector	184
A.5.3	Track angular velocity vector represented in track frame	184
A.5.4	Absolute relative angular velocity of the solid	184
A.6	Inertia properties of the solid body	186
A.6.1	Mass matrix of solid	186
A.6.2	Inertia matrix of solid	186
A.7	Time derivative of transformation matrices	186
A.7.1	Time derivative of the track transformation matrix	186
A.7.2	Time derivative of body transformation matrix	187
A.7.3	Time derivative of intermediate transformation matrix	187
