Contents

1 Introduction **1**

1.1 Thesis objectives 4

1.2 Thesis structure 5

2 Cellular model **7**

2.1 Teletraffic random variables 8

2.2 Streaming and elastic traffic 10

2.3 Admission control 11

I Multiservice mobile cellular networks **17**

3 Elastic traffic characterization **19**

3.1 Introduction 19

3.2 Analytical model 21

3.2.1 System model 21

3.2.2 Duration of elastic flows and handover metrics 24

3.3 Validation of the analytical model 28

3.4 Conclusions 32

4 Optimal design of the Multiple Fractional Guard Channel policy 35

4.1 Introduction . . . 35

4.2 System model and MFGC policy definition . . . 37

4.3 Parameter configuration . . . 40

4.3.1 Previous algorithms . . . 40

4.3.2 Adaptive scheme . . . 43

4.4 Numerical evaluation . . . 45

4.5 Conclusions . . . 48

5 Admission control policies for time-varying traffic scenarios 51

5.1 Introduction . . . 51

5.2 System model and Virtual Partitioning policy definition . . . 52

5.3 VP in Multiservice mobile cellular Networks . . . 56

5.3.1 Streaming traffic: VPS policy . . . 56

5.3.2 Elastic traffic: VPE policy . . . 58

5.3.3 VPC policy . . . 60

5.4 Numerical evaluation . . . 64

5.5 Conclusions . . . 72

6 Reversibility and admission control policies 75

6.1 Introduction . . . 75

6.2 Reversible and insensitive AC policy . . . 76

6.3 Reversibility of trunk reservation policies . . . 80

6.4 Numerical evaluation . . . 84

6.5 Conclusions . . . 88

II 4G mobile networks 89

7 Admission control in OFDMA based mobile cellular networks 91

7.1 Introduction . . . 91

7.2 Adaptive modulation and coding . . . 93

7.3 System description and analytical model . . . 96

7.3.1 Static AC policy . . . 97

7.3.2 Dynamic AC policy . . . 102

7.4 Numerical evaluation . . . 105

7.4.1 Parameter setting . . . 106

7.4.2 Numerical results . . . 110

7.5 Conclusions . . . 121

8 Admission control in femtocells 123

8.1 Introduction . . . 123

8.2 Femtocell user activity profile model . . . 126

8.2.1 System Model . . . 127

8.2.2 Characterization of Idle and Busy Periods . . . 130

8.3 Performance Metrics for macrocell users . . . 131

8.4 Numerical evaluation . . . 134

8.4.1 Parameter Setting . . . 134

8.4.2 Numerical Results . . . 136

8.5 Conclusions . . . 142

9 Admission control in cognitive radio networks **143**

9.1 Introduction 143

9.2 System model and channel sharing strategies 145

9.2.1 System model 145

9.2.2 Channel sharing strategies 146

9.3 Markov decision processes and optimal AC policies 154

9.3.1 Markov decision processes 155

9.3.2 Optimal AC policy 159

9.4 Numerical evaluation 161

9.5 Conclusions 170

10 Conclusions **175**

Apendixes **181**

A Abbreviations and acronyms **181**

B Algorithms and matrix definitions **185**

B.1 PMC and BGMP algorithms 185

B.2 Matrix definitions for OFDMA based networks 190

B.2.1 Static AC policy 190

B.2.2 Dynamic AC policy 193

B.3 Matrix definitions for cognitive radio technology 194

C Mathematical tools **199**

C.1 Random variable distributions 199

C.1.1 General distributions 199

C.1.2 Phase type distributions 202

C.2 Level-dependent finite QBDs: LLR algorithm 204

D Simulations tools **207**

D.1 OPNET discrete-event simulator 207

D.2 C++ discrete-event simulator 208

E Publications **211**

E.1 Related with this thesis 211

E.1.1 Journal 211

E.1.2 International conferences 212

E.2 Other publications 213

E.2.1 International conferences 213

F Research projects related to this thesis **215**

Bibliography **217**
