| Declaración inicial | III |
| Abstract | V |
| Resumen | VII |
| Resum | IX |
| Acknowledgements | XI |
| Contents | XIII |
| 1 Introduction | 1 |
| 1.1 Motivation and objectives | 1 |
| 1.2 Dynamics of viscoelastic structures | 3 |
| 1.3 Thesis organization | 6 |
| 1.3.1 A new recursive scheme to eigenvalues' computation | 7 |
| 1.3.2 The non-viscous set | 8 |
| 1.3.3 The parametric method: single dof systems | 9 |
| 1.3.4 The parametric method: multiple dof systems | 10 |
| 1.3.5 The Equivalent Viscous Model | 11 |
| 1.3.6 An application to frame structures with free viscoelastic layers | 12 |
| Bibliography | 15 |

| | |
|---|----|
| 2 Computation of eigenvalues in proportionally damped viscoelastic structures based on the fixed–point iteration (published in <i>Applied Mathematics and Computation</i>) | 19 |
| 2.1 Introduction | 19 |
| 2.2 Single Degree–of–Freedom Systems | 22 |
| 2.2.1 Eigenvalue Problem and Recursive Functions | 22 |
| 2.2.2 Complex Eigenvalues | 25 |
| 2.2.3 Real Eigenvalues | 34 |
| 2.3 Multiple Degree–of–Freedom Systems | 35 |
| 2.4 Numerical Examples | 37 |
| 2.4.1 Example 1: Single Degree–of–Freedom Systems | 37 |
| 2.4.2 Example 2: Multiple Degree–of–Freedom Systems | 42 |
| 2.5 Conclusions | 46 |
| Appendix 2.A | 48 |
| Bibliography | 51 |
| | |
| 3 Characterization of Real Eigenvalues in Linear Viscoelastic Oscillators and the Non-viscous Set (submitted to <i>Journal of Applied Mechanics, Transactions of the ASME</i>) | 57 |
| 3.1 Introduction | 57 |
| 3.2 Location of real eigenvalues; the non-viscous set | 59 |
| 3.2.1 Exact Limits of the Non–viscous Set | 64 |
| 3.2.2 Approximated Limits of the Non–viscous Set | 67 |
| 3.3 Numerical Computation of Non-viscous Eigenvalues | 69 |
| 3.3.1 Existing One-Step Methods | 69 |
| 3.3.2 Proposed Method | 70 |
| 3.4 Numerical Example | 72 |
| 3.5 Conclusions | 75 |
| Bibliography | 79 |
| | |
| 4 Parametric solutions of the eigenvalue problem for single–degree–of–freedom viscoelastic systems (submitted to <i>AIAA Journal</i>) | 81 |
| 4.1 Introduction | 81 |

| | | |
