

## TABLE OF CONTENTS

Abstract	i
Resumen	iii
Resum	v
1. INTRODUCTION	1
1.1. VOCs in plants	6
1.1.1. VOCs in fleshy fruits	6
1.1.2. VOC changes during ripening	8
1.2. Fruit VOCs and interactions with vertebrates	11
1.3. Fruit VOCs and interactions with insects	12
1.4. Fruit VOCs and interactions with microbes	14
1.5. VOCs as mediators of indirect interactions	14
1.5.1. Fruit VOCs and interactions among insects	15
1.5.2. Fruit VOCs and interactions with insects and vertebrates	15
1.5.3. Fruit VOCs and interactions with microorganisms and insects	16
1.5.4. Fruit VOCs and interactions with microorganisms and vertebrates	17
1.6. VOCs in fruit crops and agriculture	18
1.7. Concluding remarks and future prospects	19
1.8. Literature Cited	21
2. OBJECTIVES	31
3. RESULTS: CHAPTER 1.	35
Terpene downregulation in orange reveals the role of fruit aromas in mediating interactions with insect herbivores and pathogens	
4. RESULTS: CHAPTER 2	67
The monoterpene limonene in orange peels attracts pests and microorganisms	
5. RESULTS: CHAPTER 3	79
Terpene downregulation triggers innate immunity constitutively and jasmonate-mediated defense in transgenic oranges leading to resistance against fungal pathogens	
6. GENERAL DISCUSSION AND OUTLOOK	149
6.1. The language of volatiles	151
6.2. Fruit volatiles and seed dispersers	151
6.3. Fruit volatiles and insects	153
6.4. Fruit volatiles and microorganisms	154
6.5. Fruit volatiles in multitrophic interactions	155
6.6. Metabolic engineering of volatiles in relation to fruit flavor	156
6.7. Plant volatile research	157
6.8. Literature cited	159
7. CONCLUSIONS	161
